Safety Instructions and Approval

Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only by authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

Warranty

We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

Be a Registered Owner

Web registration is preferred. You can register your Vigor router via <http://www.DrayTek.com>.

Firmware & Tools Updates

Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

European Community Declarations

Manufacturer: DrayTek Corp.
Address: No. 26, Fu Shing Road, HuKou Township, HsinChu Industrial Park, Hsin-Chu, Taiwan 303
Product: Vigor2920 Series Router

DrayTek Corp. declares that Vigor2920 Series of routers are in compliance with the following essential requirements and other relevant provisions of R&TTE Directive 1999/5/EEC.

The product conforms to the requirements of Electro-Magnetic Compatibility (EMC) Directive 2004/108/EC by complying with the requirements set forth in EN55022/Class B and EN55024/Class B.

The product conforms to the requirements of Low Voltage (LVD) Directive 2006/95/EC by complying with the requirements set forth in EN60950-1.

Regulatory Information

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device may accept any interference received, including interference that may cause undesired operation.

Please visit <http://www.draytek.com/user/SupportDLRTTECE.php#>

This product is designed for 2.4GHz WLAN network throughout the EC region and Switzerland with restrictions in France. Please see the user manual for the applicable networks on your product.

Introduction

Vigor2920 series is a broadband router. It integrates IP layer QoS, NAT session/bandwidth management to help users control works well with large bandwidth.

By adopting hardware-based VPN platform and hardware encryption of AES/DES/3DS, the router increases the performance of VPN greatly, and offers several protocols (such as IPSec/PPTP/L2TP) with up to 2 VPN tunnels.

The object-based design used in SPI (Stateful Packet Inspection) firewall allows users to set firewall policy with ease. CSM (Content Security Management) provides users control and management in IM (Instant Messenger) and P2P (Peer to Peer) more efficiency than before. By the way, DoS/DDoS prevention and URL/Web content filter strengthen the security outside and control inside.

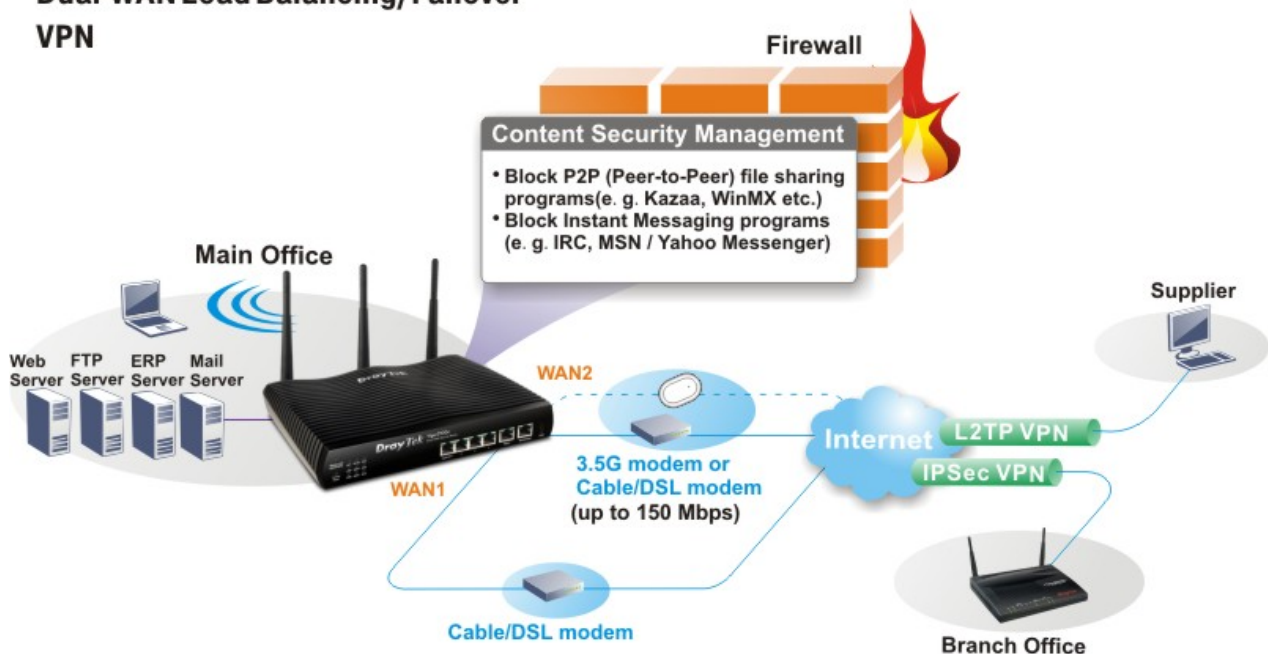

Object-based firewall is flexible and allows your network be safe. In addition, Vigor2920 series supports USB interface for connecting USB printer to share printer or USB storage device for sharing files.

Vigor2920 series provides two-level management to simplify the configuration of network connection. The user mode allows user accessing into WEB interface via simple configuration. However, if users want to have advanced configurations, they can access into WEB interface through admin mode.

Security & Firewall

Dual-WAN Load Balancing/Failover

VPN

1.1 Web Configuration Buttons Explanation

Several main buttons appeared on the web pages are defined as the following:

| | |
|---|--|
|  | Save and apply current settings. |
|  | Cancel current settings and recover to the previous saved settings. |
|  | Clear all the selections and parameters settings, including selection from drop-down list. All the values must be reset with factory default settings. |
|  | Add new settings for specified item. |
|  | Edit the settings for the selected item. |
|  | Delete the selected item with the corresponding settings. |

Note: For the other buttons shown on the web pages, please refer to Chapter 4 for detailed explanation.

1.2 LED Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

1.2.1 For Vigor2920

| LED | Status | Explanation |
|----------------|----------|--|
| ACT (Activity) | Blinking | The router is powered on and running normally. |
| | Off | The router is powered off. |
| USB | On | USB device is connected and ready for use. |
| | Blinking | The data is transmitting. |
| CSM | On | The profile(s) of CSM (Content Security Management) for IM/P2P, URL/Web Content Filter application is enabled from Firewall >>General Setup . (Such profile must be established under CSM menu). |
| WCF | On | The Web Content Filter is active. (It is enabled from Firewall >> General Setup). |
| WAN1/2 | On | The WAN1 or WAN2 connection is ready. |
| | Blinking | It will blink while transmitting data. |
| DoS | On | The DoS/DDoS function is active. |
| | Blinking | It will blink while an attack is detected. |
| VPN | On | The VPN tunnel is active. |
| QoS | On | The QoS function is active. |

LED on Connector

| | | | |
|-----------------|-------------------|--|--|
| WAN1 | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| | Right LED (Green) | On | The port is connected with 100Mbps. |
| | | Off | The port is connected with 10Mbps when left LED is on. |
| WAN2(Giga) | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| | Right LED (Green) | On | The port is connected with 1000Mbps. |
| | | Off | The port is connected with 10/100Mbps when left LED is on. |
| GigaLAN 1/2/3/4 | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| | Right LED (Green) | On | The port is connected with 1000Mbps. |
| Off | | The port is connected with 10/100Mbps when left LED is on. | |

| Interface | Description |
|-----------------|---|
| Factory Reset | Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration. |
| GigaLAN (1-4) | Connecters for local networked devices. |
| WAN1/WAN2(Giga) | Connecters for remote networked devices. |
| USB | Connector for 3G Modem or printer. |
| PWR | Connector for a power adapter. |
| ON/OFF | Power Switch. |

1.2.2 For Vigor2920n

| LED | Status | Explanation |
|----------------|----------|---|
| ACT (Activity) | Blinking | The router is powered on and running normally. |
| | Off | The router is powered off. |
| USB | On | USB device is connected and ready for use. |
| | Blinking | The data is transmitting. |
| CSM | On | The profile(s) of CSM (Content Security Management) for IM/P2P, URL/Web Content Filter application is enabled from Firewall >>General Setup . (Such profile must be established under CSM menu). |
| WLAN | On | Wireless access point is ready. |
| | Blinking | It will blink slowly while wireless traffic goes through. If ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and it will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.) |
| WAN1/2 | On | The WAN1 or WAN2 connection is ready. |
| | Blinking | It will blink while transmitting data. |
| DoS | On | The DoS/DDoS function is active. |
| | Blinking | It will blink while an attack is detected. |
| VPN | On | The VPN tunnel is active. |
| QoS | On | The QoS function is active. |

LED on Connector

| | | | |
|-----------------|-------------------|----------|--|
| WAN1 | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| WAN2(Giga) | Right LED (Green) | On | The port is connected with 100Mbps. |
| | | Off | The port is connected with 10Mbps when left LED is on. |
| | | Blinking | The data is transmitting. |
| GigaLAN 1/2/3/4 | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| GigaLAN 1/2/3/4 | Right LED (Green) | On | The port is connected with 1000Mbps. |
| | | Off | The port is connected with 10/100Mbps when left LED is on. |

| Interface | Description |
|-------------------------|---|
| Wireless LAN ON/OFF/WPS | Press "Wireless LAN ON/OFF/WPS" button once to wait for client device making network connection through WPS. Press "Wireless LAN ON/OFF/WPS" button twice to enable (WLAN LED on) or disable (WLAN LED off) wireless connection. |
| Factory Reset | Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration. |
| GigaLAN (1-4) | Connecters for local networked devices. |
| WAN1/WAN2(Giga) | Connecters for remote networked devices. |
| USB | Connector for 3G Modem or printer. |
| PWR | Connector for a power adapter. |
| ON/OFF | Power Switch. |

1.2.3 For Vigor2920Vn

| LED | Status | Explanation |
|----------------|----------|---|
| ACT (Activity) | Blinking | The router is powered on and running normally. |
| | Off | The router is powered off. |
| USB | On | USB device is connected and ready for use. |
| | Blinking | The data is transmitting. |
| CSM | On | The profile(s) of CSM (Content Security Management) for IM/P2P, URL/Web Content Filter application can be enabled from Firewall >>General Setup . (Such profile must be established under CSM menu). |
| WLAN | On | Wireless access point is ready. |
| | Blinking | It will blink slowly while wireless traffic goes through. If ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and it will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.) |
| WAN1/2 | On | The WAN1 or WAN2 connection is ready. |
| | Blinking | It will blink while transmitting data. |
| Line | On | A PSTN phone call comes (in and out). However, when the phone call is disconnected, the LED will be off. |
| | Off | There is no PSTN phone call. |
| Phone 1/2 | On | The phone connected to this port is off-hook. |
| | Off | The phone connected to this port is on-hook. |
| | Blinking | A phone call comes. |

LED on Connector

| | | | |
|----------------------|----------------------|----------|--|
| WAN1/ WAN2 (Giga) | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| | Right LED (Green) | On | The port is connected with 1000Mbps. |
| | | Off | The port is connected with 10/100Mbps when left LED is on. |
| | | Blinking | The data is transmitting. |
| GigaLAN 1/2/3/4 | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| | Right LED (Green) | On | The port is connected with 1000Mbps. |
| | | Off | The port is connected with 10/100Mbps when left LED is on. |
| | | Blinking | The data is transmitting. |

| Interface | Description |
|-------------------------|---|
| Wireless LAN ON/OFF/WPS | Press "Wireless LAN ON/OFF/WPS" button once to wait for client device making network connection through WPS. Press "Wireless LAN ON/OFF/WPS" button twice to enable (WLAN LED on) or disable (WLAN LED off) wireless connection. |
| Factory Reset | Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration. |
| Phone 1/2 | Connector for analog phone(s). |
| Line | Connector for PSTN life line. |
| GigaLAN (1-4) | Connectors for local networked devices. |
| WAN1/WAN2(Giga) | Connectors for remote networked devices. |
| USB | Connector for Mobile HDD, 3G Modem or printer. |
| PWR | Connector for a power adapter. |
| ON/OFF | Power Switch. |

1.2.4 For Vigor2920V

| LED | Status | Explanation | |
|-------------------------|----------------------|--|--|
| ACT (Activity) | Blinking | The router is powered on and running normally. | |
| | Off | The router is powered off. | |
| USB | On | USB device is connected and ready for use. | |
| | Blinking | The data is transmitting. | |
| CSM | On | The profile(s) of CSM (Content Security Management) for IM/P2P, URL/Web Content Filter application can be enabled from Firewall >>General Setup . (Such profile must be established under CSM menu). | |
| | Off | The Web Content Filter is disabled. | |
| WCF | On | The Web Content Filter is active. (It is enabled from Firewall >> General Setup). | |
| WAN1/2 | On | The WAN1 or WAN2 connection is ready. | |
| | Blinking | It will blink while transmitting data. | |
| DoS | On | The DoS/DDoS function is active. | |
| | Blinking | It will blink while deleting an attack. | |
| Phone 1/2 | On | The phone connected to this port is off-hook. | |
| | Off | The phone connected to this port is on-hook. | |
| | Blinking | A phone call comes. | |
| <i>LED on Connector</i> | | | |
| WAN 1/ WAN2 (Giga) | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| | Right LED (Green) | On | The port is connected with 1000Mbps. |
| | | Off | The port is connected with 10/100Mbps when left LED is on. |
| | | Blinking | The data is transmitting. |
| GigaLAN 1/2/3/4 | Left LED (Green) | On | The port is connected. |
| | | Off | The port is disconnected. |
| | | Blinking | The data is transmitting. |
| | Right LED (Green) | On | The port is connected with 1000Mbps. |
| | | Off | The port is connected with 10/100Mbps when left LED is on. |
| | | Blinking | The data is transmitting. |

| Interface | Description |
|-----------------|---|
| Factory Reset | Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration. |
| Phone 1/2 | Connecters for analog phone(s). |
| GigaLAN (1-4) | Connecters for local networked devices. |
| WAN1/WAN2(Giga) | Connecters for remote networked devices. |
| USB | Connector for Mobile HDD, 3G Modem or printer. |
| PWR | Connector for a power adapter. |
| ON/OFF | Power Switch. |

1.3 Hardware Installation

Before starting to configure the router, you have to connect your devices correctly.

1. Connect the cable Modem/DSL Modem/Media Converter to any WAN port of router with Ethernet cable (RJ-45).
2. Connect one end of an Ethernet cable (RJ-45) to one of the LAN ports of the router and the other end of the cable (RJ-45) into the Ethernet port on your computer.
3. Connect one end of the power adapter to the router's power port on the rear panel, and the other side into a wall outlet.
4. Power on the device by pressing down the power switch on the rear panel.
5. The system starts to initiate. After completing the system test, the **ACT** LED will light up and start blinking.

(For the detailed information of LED status, please refer to section 1.1.)

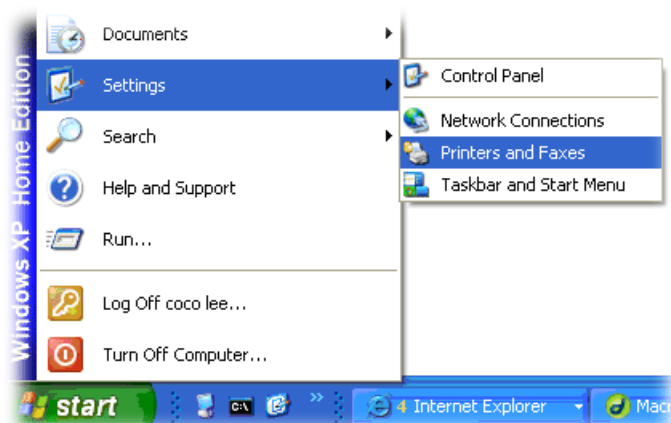

1.4 Printer Installation

You can install a printer onto the router for sharing printing. All the PCs connected this router can print documents via the router. The example provided here is made based on Windows XP/2000. For Windows 98/SE/Vista, please visit www.DrayTek.com.

Before using it, please follow the steps below to configure settings for connected computers (or wireless clients).

1. Connect the printer with the router through USB/parallel port.
2. Open **Start->Settings-> Printer and Faxes**.

3. Open **File->Add Printer**. A welcome dialog will appear. Please click **Next**.

4. Click Local printer attached to this computer and click Next.

5. In this dialog, choose **Create a new port Type of port** and use the drop down list to select **Standard TCP/IP Port**. Click Next.

6. In the following dialog, type **192.168.1.1** (router's LAN IP) in the field of **Printer Name or IP Address** and type **IP_192.168.1.1** as the port name. Then, click **Next**.

7. Click **Standard** and choose **Generic Network Card**.

8. Then, in the following dialog, click **Finish**.

9. Now, your system will ask you to choose right name of the printer that you installed onto the router. Such step can make correct driver loaded onto your PC. When you finish the selection, click **Next**.

10. For the final stage, you need to go back to **Control Panel-> Printers** and edit the property of the new printer you have added.

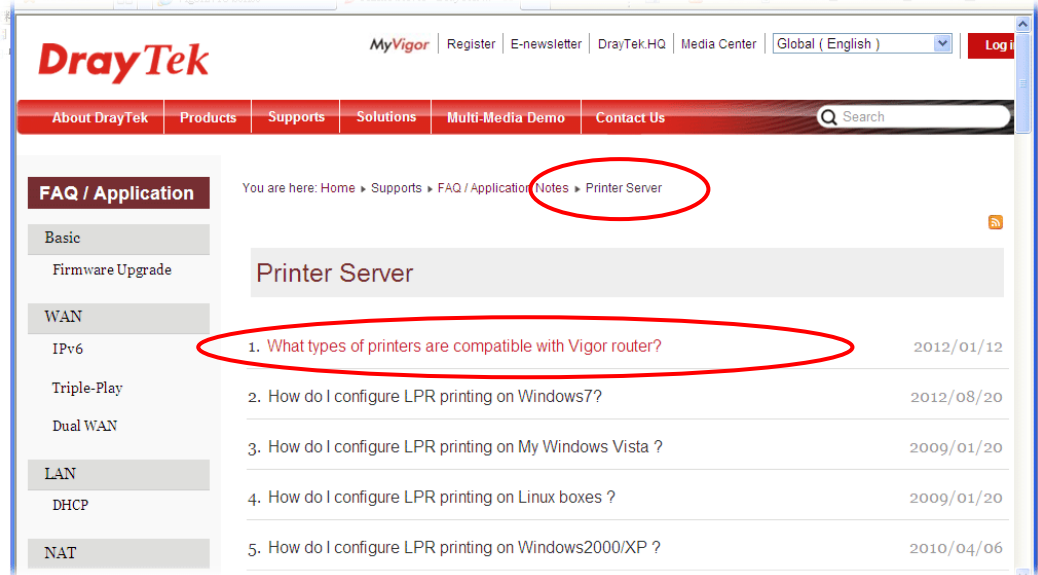

11. Select "**LPR**" on Protocol, type **p1** (number 1) as Queue Name. Then click **OK**. Next please refer to the red rectangle for choosing the correct protocol and LPR name.

The printer can be used for printing now. Most of the printers with different manufacturers are compatible with vigor router.

Note 1: Some printers with the fax/scanning or other additional functions are not supported. If you do not know whether your printer is supported or not, please visit www.DrayTek.com to find out the printer list. Open **Support > FAQ/Application Notes**; find out the link of **Printer Server** and click it; then click the **What types of printers are compatible with Vigor router?** link.

Note 2: Vigor router supports printing request from computers via LAN ports but not WAN port.

2

Configuring Basic Settings

For using the router properly, it is necessary for you to change the password of web configuration for security and adjust primary basic settings.

This chapter explains how to setup a password for accessing into the web user interface of Vigor router and how to adjust settings for accessing Internet successfully.

2.1 Accessing Web User Interface

1. Make sure your PC connects to the router correctly.

Notice: You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

Username

Password

Login

Copyright©, DrayTek Corp. All Rights Reserved. **DrayTek**

3. Please type “admin/admin” on Username/Password and click **Login**.

Notice: If you fail to access to the web configuration, please go to “Trouble Shooting” for detecting and solving your problem.

4. The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

2.2 Changing Password

Please change the password for the original security of the router.

1. Open a web browser on your PC and type **http://192.168.1.1**. A pop-up window will open to ask for username and password.
2. Please type “admin/admin” as Username/Password for accessing into the web user interface with admin mode.
3. Now, the **Main Screen** will appear.

| | | | |

Note: The home page will change slightly in accordance with the type of the router you have.

4. Go to **System Maintenance** page and choose **Administrator Password**.

Administrator Password

| | |
|------------------|----------------------|
| Old Password | <input type="text"/> |
| New Password | <input type="text"/> |
| Confirm Password | <input type="text"/> |

Note: Password can contain only a-z A-Z 0-9 , ; : " < > * + = \ | ? @ # ^ ! ()

OK

5. Enter the login password on the field of **Old Password**. Type a new password in **New Password** and **Confirm New Password** fields. Then click **OK** to continue.
6. Now, the password has been changed. Next time, use the new password to access the Web user interface for this router.

2.3 Quick Start Wizard

Notice: Quick Start Wizard for user mode operation is the same as for admin mode operation.

If your router can be under an environment with high speed NAT, the configuration provide here can help you to deploy and use the router quickly. The first screen of **Quick Start Wizard** is entering login password. After typing the password, please click **Next**.

Quick Start Wizard

Enter login password

Please enter an alpha-numeric string as your **Password** (Max 23 characters).

| | |
|------------------|--------------------------|
| Old Password | <input type="password"/> |
| New Password | <input type="password"/> |
| Confirm Password | <input type="password"/> |

< Back Next > Finish Cancel

On the next page as shown below, please select the WAN interface that you use. If Ethernet interface is used, please choose WAN1/2 (based on the physical hardware connection); if 3G USB modem is used, please choose WAN3. Choose **Auto negotiation** as the physical type for your router. Then click **Next** for next step.

WAN1/WAN2 and WAN3 will bring up different configuration page. Refer to the following for detailed information.

2.3.1 For WAN1/WAN2

Choose WAN1/WAN2 and click **Next** to display the following page.

Please select the appropriate Internet access type according to the information from your ISP. For example, you should select PPPoE mode if the ISP provides you PPPoE interface. Then click **Next** for next step.

2.3.1.1 PPPoE

PPPoE stands for **Point-to-Point Protocol over Ethernet**. It relies on two widely accepted standards: PPP and Ethernet. It connects users through an Ethernet to the Internet with a common broadband medium, such as wireless device or cable modem. All the users over the Ethernet can share a common connection.

PPPoE is used for most of modem users. All local users can share one PPPoE connection for accessing the Internet. Your service provider will provide you information about user name, password, and authentication mode. If your ISP provides you the **PPPoE** connection, please select **PPPoE** for this router.

1. Choose **WAN1/WAN2** as the WAN Interface and click the **Next** button. The following page will be open for you to specify Internet Access Type.

Quick Start Wizard

Connect to Internet

WAN 1
Select one of the following Internet Access types provided by your ISP.

Quick Start Wizard Setup OK !!!

4. Now, you can enjoy surfing on the Internet.

2.4 Service Activation Wizard

Service Activation Wizard can guide you to activate WCF service (Web Content Filter) with a quick and easy way.

Note: Web Content Filter (WCF) is not a built-in service of Vigor router, but a service powered by Commtouch. If you want to use such service (trial or formal edition), you have to perform the procedure of activation first. For the service of formal edition, please contact with your dealer for detailed information.

Service Activation Wizard is a tool which allows you to use trial version or update the license of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>. For using Web Content Filter Profile, please refer to later section **Web Content Filter Profile** for detailed information.

Now, follow the steps listed below to activate WCF feature for your router.

1. Open **Service Activation Wizard**.

Quick Start Wizard
Service Activation Wizard
VoIP Wizard
Online Status

- The screen of **Service Activation Wizard** will be shown as follows. Choose the one you need and click **Next**. In this case, we choose to activate free trial edition.

Physical Connection for IPv6 Protocol

Online Status

| Physical Connection | | System Uptime: 4:8:42 | |
|---|-------------------|-----------------------|-------------------|
| IPv4 | IPv6 | | |
| LAN Status | | | |
| IP Address FE80::250:7FFF:FEEA:7EC8/64 (Link) | | | |
| TX Packets | RX Packets | TX Bytes | RX Bytes |
| 2 | 0 | 156 | 0 |
| WAN IPv6 Status | | | |
| Enable | Mode | Up Time | |
| No | Offline | --- | |
| IP | | | Gateway IP |
| --- | | | --- |

Detailed explanation (for IPv4) is shown below:

| Item | Description |
|------------------------------------|---|
| LAN Status | <p>Primary DNS - Displays the IP address of the primary DNS.</p> <p>Secondary DNS - Displays the IP address of the secondary DNS.</p> <p>IP Address - Displays the IP address of the LAN interface.</p> <p>TX Packets - Displays the total transmitted packets at the LAN interface.</p> <p>RX Packets - Displays the total number of received packets at the LAN interface.</p> |
| WAN 1 Status ~ WAN 3 Status | <p>Line - Displays the physical connection of this interface.</p> <p>Name - Displays the name set in WAN1/WAN web page.</p> <p>Mode - Displays the type of WAN connection (e.g., PPPoE).</p> <p>Up Time - Displays the total uptime of the interface.</p> <p>IP - Displays the IP address of the WAN interface.</p> <p>GW IP - Displays the IP address of the default gateway.</p> <p>TX Packets - Displays the total transmitted packets at the WAN interface.</p> <p>TX Rate - Displays the speed of transmitted octets at the WAN interface.</p> |

| Item | Description |
|------|--|
| | <p>RX Packets - Displays the total number of received packets at the WAN interface.</p> <p>RX Rate - Displays the speed of received octets at the WAN interface.</p> |

Detailed explanation (for IPv6) is shown below:

| Item | Description |
|------------------------|---|
| LAN Status | <p>IP Address- Displays the IPv6 address of the LAN interface..</p> <p>TX Packets-Displays the total transmitted packets at the LAN interface.</p> <p>RX Packets-Displays the total received packets at the LAN interface.</p> <p>TX Bytes - Displays the total transmitted octets at the LAN interface.</p> <p>RX Bytes - Displays the total received octets at the LAN interface.</p> |
| WAN IPv6 Status | <p>Enable – No in red means such interface is available but not enabled. Yes in green means such interface is enabled. No in red means such interface is not available.</p> <p>Mode - Displays the type of WAN connection (e.g., TSPC).</p> <p>Up Time - Displays the total uptime of the interface.</p> <p>IP - Displays the IP address of the WAN interface.</p> <p>Gateway IP - Displays the IP address of the default gateway.</p> |

Note: The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

2.6.2 Virtual WAN

Such page displays the virtual WAN connection information. Virtual WAN are used by TR-069 management, VoIP service and so on. The Application field will list the purpose of such WAN connection.

Online Status

| Virtual WAN | | System Uptime: 143:11:45 | | | |
|---------------------|--------------|--------------------------|---------------------|-------------------|---------------------|
| WAN 5 Status | | | | | |
| Enable | Line | Name | Mode | Up Time | Application |

| WAN 6 Status | | | | | |
| Enable | Line | Name | Mode | Up Time | Application |
| Yes | Ethernet | | --- | 00:00:00 | Management |
| IP | GW IP | TX Packets | TX Rate(Bps) | RX Packets | RX Rate(Bps) |
| --- | --- | 0 | 0 | 0 | 0 |
| WAN 7 Status | | | | | |
| Enable | Line | Name | Mode | Up Time | Application |
| Yes | Ethernet | | --- | 00:00:00 | Management |
| IP | GW IP | TX Packets | TX Rate(Bps) | RX Packets | RX Rate(Bps) |
| --- | --- | 0 | 0 | 0 | 0 |

2.7 Saving Configuration

Each time you click **OK** on the web page for saving the configuration, you can find messages showing the system interaction with you.

Ready indicates the system is ready for you to input settings.

Settings Saved means your settings are saved once you click **Finish** or **OK** button.

2.8 Registering Vigor Router

You have finished the configuration of Quick Start Wizard and you can surf the Internet at any time. Now it is the time to register your Vigor router to MyVigor website for getting more service. Please follow the steps below to finish the router registration.

1. Please login the web configuration interface of Vigor router by typing “**admin/admin**” as User Name / Password.

2. Click **Support Area>>Production Registration** from the home page.

3. A **Login** page will be shown on the screen. Please type the account and password that you created previously. And click **Login**.

Please take a moment to register.

Membership Registration entitles you to upgrade firmware for your purchased product and receive news about upcoming products and services!

Tutorials and Applications

3.1 How to configure settings for IPv6 Service

Due to the shortage of IPv4 address, more and more countries use IPv6 to solve the problem. However, to continually use the original rich resources of IPv4, both IPv6 and IPv4 networks shall communicate for each other via intercommunication mechanism to complete the shifting job from IPv4 to IPv6 gradually. At present, there are three common types of intercommunication mechanisms:

- **Dual Stack**

The user can use both IPv4 and IPv6 techniques at the same time. That means adding an IPv6 stack on the origin network layer to let the host own the communication capability of IPv4 and IPv6.

- **Tunnel**

Both IPv6 hosts can be communicated for each other via existing IPv4 network environment. The IPv6 packets will be encapsulated with the header of IPv4 first. Later, the packets will be transformed and adjusted as IPv4 payload. Once the packets arrive the border between IPv4 and IPv6, the header of IPv4 on the packets will be removed. Then, the packets with IPv6 address will be forwarded to the destination of IPv6 network.

- **Translation**

Such feature is active only for the user who uses IPv4 to communicate with other user using IPv4 service.

Before configuring the settings on Vigor2920, you need to know which connection type that your IPv6 service used.

Note: For the IPv6 service, you have to configure WAN/LAN settings before using the service.

I. Configuring the WAN Settings

For the IPv6 WAN settings for Vigor2920, there are five connection types to be chosen: PPP, TSPC, AICCU, DHCPv6 Client and Static IPv6.

1. Access into the web user interface of Vigor2920. Open **WAN**>> **Internet Access**. Choose one of the WAN interfaces (e.g., WAN2 in this case) as the one supporting IPv6 service. Then, choose **PPPoE** as the **Access Mode** and click **Details Page**.

WAN >> Internet Access

Internet Access

| Index | Display Name | Physical Mode | Access Mode | | |
|-------|--------------|---------------|----------------------|--------------|------|
| WAN1 | | Ethernet | Static or Dynamic IP | Details Page | IPv6 |
| WAN2 | | Ethernet | PPPoE | Details Page | IPv6 |
| WAN3 | | USB | None | Details Page | IPv6 |

Note : Only one WAN can support IPv6.

Note: Only one WAN interface support IPv6 service at one time. In this example, WAN2 is chosen as the one supporting IPv6 service.

- In the following figure, click Enable and type the required information. Click **OK** to save the settings and return to previous setting page.

WAN >> Internet Access

WAN 2

II. Configuring the LAN Settings

After finished the WAN settings for IPv6, please configure the LAN settings to make the router's client getting the IPv6 address.

1. Access into the web user interface of Vigor2920. Open **LAN>> General Setup**. Click the **IPv6** button.

Note: Only the subnet of **LAN1** supports IPv6 feature.

LAN >> General Setup

LAN 1 IPv6 Setup

RADVD Configuration

Enable Disable

Advertisement Lifetime Seconds (Range : 600 - 9000)

DHCPv6 Server Configuration

Enable Server Disable Server

Start IPv6 Address

End IPv6 Address

DNS Server IPv6 Address

Primary DNS Server

Secondary DNS Server

Static IPv6 Address configuration

IPv6 Address / Prefix Length /

Current IPv6 Address Table

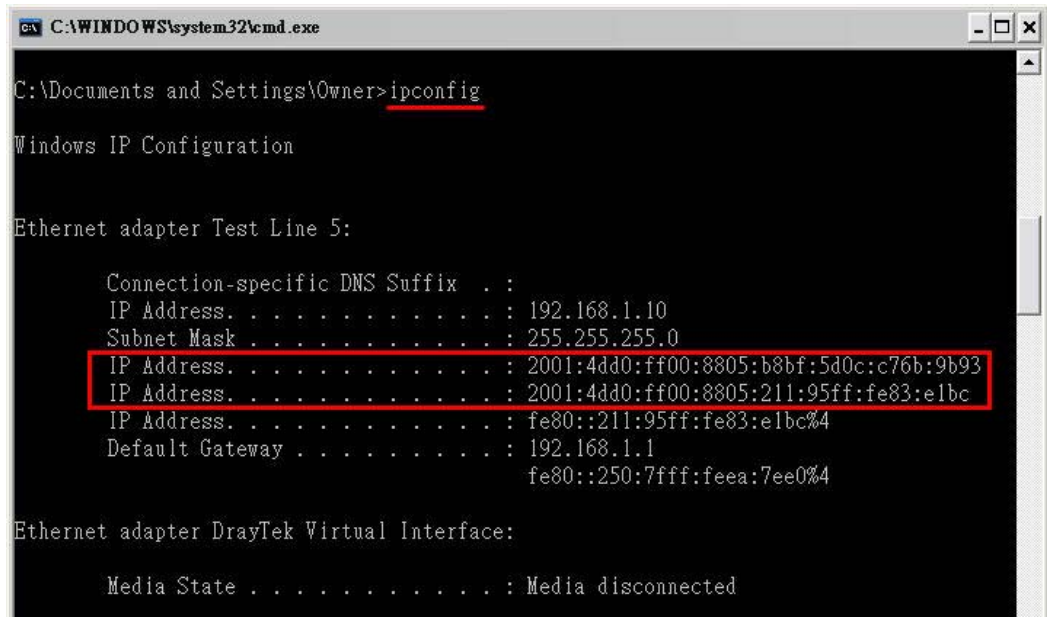

| Index | IPv6 Address/Prefix Length | Scope |
|-------|-----------------------------|-------|
| 1 | FE80::250:7FFF:FECE:4720/64 | Link |

2. In the field of **RADVD Configuration**, the default setting is **Enable**. The client's PC will ask RADVD service for the Prefix of IPv6 address automatically, and generate an Interface ID by itself to compose a full and unique IPv6 address.
3. In the field of **HCPv6 Server Configuration**, when DHCPv6 service is enabled, you can assign available IPv6 address for the client manually.

Note: When both mechanisms are enabled, the client can determine which mechanism to be used (e.g., the default mechanism for Windows7 is RADVD).

III. Confirming IPv6 Service Run Successfully

1. Make sure you have acquired the correct IPv6 IP address. Get into MS-DOS interface and type the command of “ipconfig”. Refer to the following figure.

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Owner>ipconfig

Windows IP Configuration

Ethernet adapter Test Line 5:

    Connection-specific DNS Suffix  . : 
    IP Address. . . . . : 192.168.1.10
    Subnet Mask . . . . . : 255.255.255.0
    IP Address. . . . . : 2001:4dd0:ff00:8805:b8bf:5d0c:c76b:9b93
    IP Address. . . . . : 2001:4dd0:ff00:8805:211:95ff:fe83:e1bc
    IP Address. . . . . : fe80::211:95ff:fe83:e1bc%4
    Default Gateway . . . . . : 192.168.1.1
                                   fe80::250:7fff:feea:7ee0%4

Ethernet adapter DrayTek Virtual Interface:

    Media State . . . . . : Media disconnected
```

From the above figure we can see IPv6 IP address has been detected by the system.

2. Use the Ping command to ping any IPv6 address indicating an IPv6 website. For example, www.kame.net is a website supporting IPv4 IP and IPv6 IP services. Its IPv6 address is seen with a format of 2001:200:dff:fff1:216:3eff:feb1:44d7.

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Owner>ping 2001:200:dff:fff1:216:3eff:feb1:44d7

Ping statistics for 2001:200:dff:fff1:216:3eff:feb1:44d7:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 617ms, Maximum = 743ms, Average = 652ms

C:\Documents and Settings\Owner>
```

After getting the above message, it means the IPv6 service has been activated successfully.

3. Connect to the website for IPv6. Open a web browser and type an URL of IPv6, e.g., www.kame.net. If your computer accesses into the website by using IPv6 address, you may see a turtle dancing on the screen. If not, only a steady turtle will be seen.

If you can see a turtle dancing on the screen, that means IPv6 service is ready for you to access and utilize.

3.2 How to Send a Notification to Specified Phone Number via SMS Service in WAN Disconnection

Follow the steps listed below:

1. Log into the web user interface of Vigor router.
2. Configure relational objects first. Open **Object Settings>>SMS/Mail Server Object** to get the following page.

Object Settings >> SMS / Mail Service Object

| SMS Provider | Mail Server | | Set to Factory Default |
|---------------------|--------------|--------------------|--|
| Index | Profile Name | SMS Provider | |
| 1. | | kotsms.com.tw (TW) | |
| 2. | | kotsms.com.tw (TW) | |
| 3. | | kotsms.com.tw (TW) | |
| 4. | | kotsms.com.tw (TW) | |
| 5. | | kotsms.com.tw (TW) | |
| 6. | | kotsms.com.tw (TW) | |
| 7. | | kotsms.com.tw (TW) | |
| 8. | | kotsms.com.tw (TW) | |
| 9. | Custom 1 | | |
| 10. | Custom 2 | | |

Index 1 to Index 8 allows you to choose the built-in SMS service provider. If the SMS service provider is not on the list, you can configure Index 9 and Index 10 to add the new service provider to Vigor router.

3. Choose any index number (e.g., Index 1 in this case) to configure the SMS Provider setting. In the following page, type the username and password and set the quota that the router can send the message out.

Object Settings >> SMS / Mail Service Object

Profile Index: 1

| | |
|------------------|--|
| Profile Name | <input type="text" value="Local number"/> |
| Service Provider | <input type="text" value="kotsms.com.tw (TW)"/> <input type="button" value="v"/> |
| Username | <input type="text" value="abc5026"/> |
| Password | <input type="password" value="..."/> |
| Quota | <input type="text" value="10"/> |
| Sending Interval | <input type="text" value="3"/> (seconds) |

- After finished the settings, click **OK** to return to previous page. Now you have finished the configuration of the SMS Provider profile setting.

Object Settings >> SMS / Mail Service Object

| SMS Provider | | Mail Server | Set to Factory Default |
|--------------|--------------|--------------------|------------------------|
| Index | Profile Name | SMS Provider | |
| 1. | Local Number | kotsms.com.tw (TW) | |
| 2. | | kotsms.com.tw (TW) | |
| 3. | | kotsms.com.tw (TW) | |
| 4. | | kotsms.com.tw (TW) | |
| 5. | | kotsms.com.tw (TW) | |
| 6. | | kotsms.com.tw (TW) | |
| 7. | | kotsms.com.tw (TW) | |
| 8. | | kotsms.com.tw (TW) | |
| 9. | Custom 1 | | |
| 10. | Custom 2 | | |

- Open **Object Settings>>Notification Object** to configure the event conditions of the notification.

Object Settings >> Notification Object

| | | | Set to Factory Default |
|-------|--------------|----------|------------------------|
| Index | Profile Name | Settings | |
| 1. | | | |
| 2. | | | |
| 3. | | | |
| 4. | | | |
| 5. | | | |
| 6. | | | |
| 7. | | | |
| 8. | | | |

- Choose any index number (e.g., Index 1 in this case) to configure conditions for sending the SMS. In the following page, type the name of the profile and check the Disconnected and Reconnected boxes for WAN to work in concert with the topic of this paper.

Object Settings >> Notification Object

Profile Index: 1

| Profile Name | | WAN_Notify | |
|--------------|--|---|--|
| Category | Status | | |
| WAN | <input checked="" type="checkbox"/> Disconnected | <input checked="" type="checkbox"/> Reconnected | |
| VPN Tunnel | <input type="checkbox"/> Disconnected | <input type="checkbox"/> Reconnected | |

- After finished the settings, click **OK** to return to previous page. You have finished the configuration of the notification object profile setting.

Object Settings >> Notification Object

| [Set to Factory Default](#) |

| Index | Profile Name | Settings |
|-------|--------------|----------|
| 1. | WAN_Notify | WAN |
| 2. | | |
| 3. | | |
| 4. | | |
| 5. | | |
| 6. | | |
| 7. | | |
| 8. | | |

- Now, open **Application >> SMS / Mail Alert Service**. Use the drop down list to choose SMS Provider and the Notify Profile (specify the time of sending SMS). Then, type the phone number in the field of Recipient (the one who will receive the SMS).

Application >> SMS / Mail Alert Service

| [Set to Factory Default](#) |

| SMS Provider | | Mail Server | | |
|---------------------------------------|------------------|-------------|----------------|---|
| Index | SMS Provider | Recipient | Notify Profile | Schedule(1-15) |
| 1 <input checked="" type="checkbox"/> | 1 - Local Number | 0912345678 | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 2 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 3 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 4 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 5 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 6 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 7 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 8 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 9 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |
| 10 <input type="checkbox"/> | 1 - Local Number | | 1 - WAN_Notify | <input type="text"/> <input type="text"/> |

- Click **OK** to save the settings. Later, if one of the WAN connections fails in your router, the system will send out SMS to the phone number specified. If the router has only one WAN interface, the system will send out SMS to the phone number while reconnecting the WAN interface successfully.

➤ **Remark: How the customize the SMS Provider**

Choose one of the Index numbers (9 or 10) allowing you to customize the SMS Provider. In the web page, type the URL string of the SMS provider and type the username and password. After clicking OK, the new added SMS provider will be added and will be available for you to specify for sending SMS out.

Object Settings >> SMS / Mail Service Object

Profile Index: 9

| | |
|--|---|
| Profile Name | <input type="text" value="Custom 1"/> |
| Service Provider | <input type="text" value="clickatell"/> |
| | <pre>api.clickatell.com/http/sendmsg? api_id=3389733&user=###txtUser###&password=###txtPwd###&to=###txtDest###&tex t=###txtMsg###</pre> |
| Please contact with your SMS provide to get the exact URL String eg:bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0?username=###txtUser### &password=###txtPwd###&msisdn=###txtDest###&message=###txtMsg### | |
| Username | <input type="text" value="ilan1234"/> |
| Password | <input type="password" value="....."/> |
| Quota | <input type="text" value="9"/> |
| Sending Interval | <input type="text" value="255"/> (seconds) |

3.3 How can I get the files from USB storage device connecting to Vigor router?

1. Plug the USB device to the USB port on the router. Make sure **Disk Connected** appears on the **Connection Status** as the figure shown below:

USB Application >> USB Disk Status

USB Mass Storage Device Status

| Connection Status: | Disk Connected | <input type="button" value="Disconnect USB Disk"/> | |
|---------------------------------|-----------------------|--|----------|
| Write Protect Status: | NO | | |
| Disk Capacity: | 2009 MB | | |
| USB Disk Users Connected | | <input type="button" value="Refresh"/> | |
| Index | Service | IP Address(Port) | Username |

Note: If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode.No data can be written to it.

2. Open **USB Application >> USB General Settings** to check the general settings. Click **OK**.

USB Application >> USB General Settings

USB General Settings

| | |
|---|--|
| General Settings | |
| Simultaneous FTP Connections | <input type="text" value="5"/> (Maximum 6) |
| Default Charset | <input type="text" value="Default"/> |
| Samba Service Settings(Network Neighborhood) | |
| <input checked="" type="radio"/> Enable <input type="radio"/> Disable | |
| Access Mode | |
| <input checked="" type="radio"/> LAN Only <input type="radio"/> LAN And WAN | |
| NetBios Name Service | |
| Workgroup Name | <input type="text" value="WORKGROUP"/> |
| Host Name | <input type="text" value="Vigor"/> |

Note: 1. If Charset is set to "default", only English long file name is supported.
2. Multi-session ftp download will be banned by Router FTP server. If your ftp client have multi-connection mechanism, such as FileZilla, you may limit client connections setting to 1 to get better performance.
3. A workgroup name must not be the same as the host name. The workgroup name and the host name can have as many as 15 characters and a host name can have as many as 23 characters , but both cannot contain any of the following: . ; : " < > * + = / \ | ? .

3. Setup a user account for the FTP service by using **USB Application >>USB User Management**. Click **Enable** to enable FTP/Samba User account. Here we add a new account "user1" and assign authorities "Read", "Write" and "List" to it.

USB Application >> USB User Management

Profile Index: 1

| | |
|--------------------|--|
| FTP/Samba User | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Username | <input type="text" value="user1"/> |
| Password | <input type="text"/> (Maximum 11 Characters) |
| Confirm Password | <input type="text"/> |
| Home Folder | <input type="text"/> |
| Access Rule | |
| File | <input checked="" type="checkbox"/> Read <input checked="" type="checkbox"/> Write <input type="checkbox"/> Delete |
| Directory | <input checked="" type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove |

Note: The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () / and space.

OK Clear Cancel

4. Click **OK** to save the configuration.
5. Make sure the FTP service is running properly. Please open a browser and type <ftp://192.168.1.1>. Use the account "user1" to login.

Log On As

Either the server does not allow anonymous logins or the e-mail address was not accepted.

FTP server: 192.168.1.1

User name:

Password:

After you log on, you can add this server to your Favorites and return to it easily.

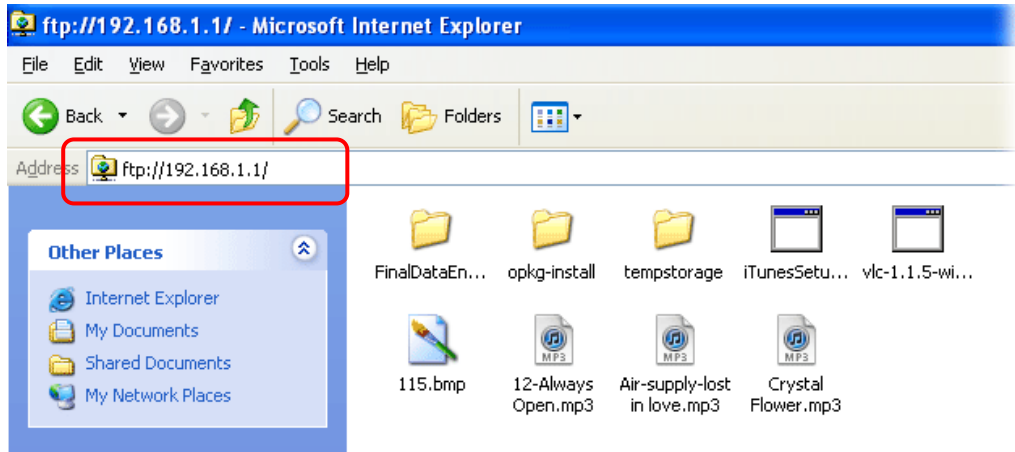

FTP does not encrypt or encode passwords or data before sending them to the server. To protect the security of your passwords and data, use Web Folders (WebDAV) instead.

Learn more about [using Web Folders](#).

Log on anonymously Save password

Log On Cancel

6. When the following screen appears, it means the FTP service is running properly.

7. Return to **USB Application >> USB Disk Status**. The information for FTP server will be shown as below.

USB Application >> USB Disk Status

USB Mass Storage Device Status

Connection Status: Disk Connected Disconnect USB Disk

Write Protect Status: No

Disk Capacity: 2009 MB

Free Capacity: 0 MB [Refresh](#)

USB Disk Users Connected | [Refresh](#) |

| Index | Service | IP Address(Port) | Username |
|-------|---------|--------------------|---|
| 1. | FTP | 192.168.1.10(1963) | user1 Drop |

Note: If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Now, users in LAN of Vigor2920 can access into the USB storage device by typing ftp://192.168.1.1 on any browser. They can add or remove files / directories, depending on the Access Rule for FTP account settings in **USB Application >>USB User Management**.

3.4 How to configure Multi-Subnet for Vigor Router

There are two types of VLAN. One is Port Based VLAN; the other is Tag Based VLAN. Refer to the following sections for learning the usage of VLAN.

I. Port Based VLAN

Vigor2920 can divide the physical LAN ports into several groups. For example, it can divide the internal departments of a company into three different groups. Each group uses different network segment. See the following graphic for an example.

| | |
|----------------------------------|--------------------------------------|
| Group 0 (VLAN0)(Human Resource): | LAN Port 1 IP: 192.168.1.0/24 |
| Group 1 (VLAN1)(Finance Dept): | LAN Port 2 IP: 192.168.2.0/24 |
| Group 2 (VLAN2)(Sales Dept.): | LAN Port 3/Port 4 IP: 192.168.3.0/24 |

Configuration:

1. In the page of **LAN >> VLAN Configuration**, check the box of **Enable** to enable the function of VLAN Configuration.
2. For VLAN0 setting, check **P1** and set **LAN1** as the **Subnet**.
3. For VLAN1 setting, check **P2** and set **LAN2** as the **Subnet**.
4. For VLAN2 setting, check **P3** and **P4**, and set **LAN3** as the **Subnet**.

LAN >> VLAN Configuration

VLAN Configuration

Enable

| | LAN | | | | Wireless LAN | | | | VLAN Tag | | | |
|-------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|----------|--------------------------|-----|----------|
| | P1 | P2 | P3 | P4 | SSID1 | SSID2 | SSID3 | SSID4 | Subnet | Enable | VID | Priority |
| VLAN0 | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | LAN 1 | <input type="checkbox"/> | 0 | 0 |
| VLAN1 | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | LAN 2 | <input type="checkbox"/> | 0 | 0 |
| VLAN2 | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | LAN 3 | <input type="checkbox"/> | 0 | 0 |
| VLAN3 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | LAN 1 | <input type="checkbox"/> | 0 | 0 |
| VLAN4 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | LAN 1 | <input type="checkbox"/> | 0 | 0 |
| VLAN5 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | LAN 1 | <input type="checkbox"/> | 0 | 0 |
| VLAN6 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | LAN 1 | <input type="checkbox"/> | 0 | 0 |
| VLAN7 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | LAN 1 | <input type="checkbox"/> | 0 | 0 |

1. Tag based VLAN only applied for LAN Ports;

2. The checked Wireless LAN SSID will not has VLAN tagging function but regarded as joining VLAN

- In the page of **LAN >> General Setup**, check the **Status** box of LAN2 and LAN3 and enable the function of DHCP.

LAN >> General Setup

General Setup

| Index | Status | DHCP | IP Address | |
|------------------|-------------------------------------|-------------------------------------|-------------|------------------------------|
| LAN 1 | V | V | 192.168.1.1 | Details Page |
| LAN 2 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | 192.168.2.1 | Details Page |
| LAN 3 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | 192.168.3.1 | Details Page |
| LAN 4 | <input type="checkbox"/> | <input type="checkbox"/> | 192.168.4.1 | Details Page |
| IP Routed Subnet | <input type="checkbox"/> | <input checked="" type="checkbox"/> | 192.168.0.1 | Details Page |

Inter-LAN Routing

| Subnet | LAN 1 | LAN 2 | LAN 3 | LAN 4 |
|--------|-------------------------------------|-------------------------------------|--------------------------|--------------------------|
| LAN 1 | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| LAN 2 | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

After finishing the above configuration, the equipment connecting to Vigor2920 LAN Port can get the corresponding IP address of the network segment.

The equipment connecting to Vigor2920 LAN Port 1 (LAN1) can get the IP address of 192.168.1.0/24

The equipment connecting to Vigor2920 LAN Port 2 (LAN2) can get the IP address of 192.168.2.0/24

The equipment connecting to Vigor2920 LAN Port 3 and Port 4 (LAN3) can get the IP address of 192.168.3.0/24

For the detailed settings of the network segment, open **LAN>>General Setup** and click **Details Page**. Adjust the settings for your request. Refer to the following figure.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup

| | | | |
|--|--|--|--|
| Network Configuration For NAT Usage IP Address: <input type="text" value="192.168.1.1"/> Subnet Mask: <input type="text" value="255.255.255.0"/> | | DHCP Server Configuration <input checked="" type="radio"/> Enable Server <input type="radio"/> Disable Server Relay Agent: <input type="radio"/> Enable <input type="radio"/> Disable Start IP Address: <input type="text" value="192.168.1.10"/> IP Pool Counts: <input type="text" value="50"/> Gateway IP Address: <input type="text" value="192.168.1.1"/> DHCP Server IP Address for Relay Agent: <input type="text"/> | |
| RIP Protocol Control: <input type="text" value="Disable"/> | | DNS Server IP Address Primary IP Address: <input type="text"/> Secondary IP Address: <input type="text"/> <input type="checkbox"/> Force router to use address for DNS | |

OK

6. To make any two of VLAN groups linked with each other, just check the boxes of the ones in the field of **Inter-LAN Routing** in the page of **LAN >> General Setup**. Refer to the following figure. LAN2 and LAN3 are linked.

LAN >> General Setup

General Setup

| Index | Status | DHCP | IP Address | |
|------------------|-------------------------------------|-------------------------------------|-------------|------------------------------|
| LAN 1 | V | V | 192.168.1.1 | Details Page |
| LAN 2 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | 192.168.2.1 | Details Page |
| LAN 3 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | 192.168.3.1 | Details Page |
| LAN 4 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | 192.168.4.1 | Details Page |
| IP Routed Subnet | <input type="checkbox"/> | <input checked="" type="checkbox"/> | 192.168.0.1 | Details Page |

Inter-LAN Routing

| Subnet | LAN 1 | LAN 2 | LAN 3 | LAN 4 |
|--------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| LAN 1 | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| LAN 2 | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| LAN 3 | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| LAN 4 | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

Note: LAN 2/3/4 are available when VLAN is enabled.

II. Tag Based VLAN

By identifying the tagged message, Vigor2920 can divide the LAN Port into several VLAN groups. Such LAN port with tagged information will accept the packets only with VLAN ID number.

For example, Vigor2920 can divide the internal departments of a company into four different groups by using VigorSwitch 2240. Each group uses different network segment and does not link for each other. VigorSwitch 2240 Trunk Port 23 and Vigor2920 LAN Port 4 are connected with network cable. See the following graphic for an example.

Group 0 (VLAN0)(Human Resource): LAN Port 4 IP: 192.168.1.0/24

Group 1 (VLAN1)(Finance Dept): LAN Port 4 IP: 192.168.2.0/24

Group 2 (VLAN2)(Sales Dept.): LAN Port 4 IP: 192.168.3.0/24

Group 3 (VLAN3)(R&D): LAN Port 4 IP: 192.168.4.0/24

Configuration

1. In the page of **LAN >> VLAN Configuration**, check the box of **Enable** to enable the function of VLAN Configuration.
2. To activate the function of VLAN Tag for VLAN0 setting, check the box of **Enable** and type the value (7) for VID setting. Then check **P4** and set **LAN1** as the **Subnet**.
3. To activate the function of VLAN Tag for VLAN1 setting, check the box of **Enable** and type the value (8) for VID setting. Then check **P4** and set **LAN2** as the **Subnet**.
4. To activate the function of VLAN Tag for VLAN2 setting, check the box of **Enable** and type the value (9) for VID setting. Then check **P4** and set **LAN3** as the **Subnet**.

5. To activate the function of VLAN Tag for VLAN3 setting, check the box of **Enable** and type the value (10) for VID setting. Then check **P4** and set **LAN4** as the **Subnet**.

LAN >> VLAN Configuration

| | | DHCP Server IP Address for Relay Agent | <input type="text"/> |
| | | DNS Server IP Address | |
| | | Primary IP Address | <input type="text"/> |
| | | Secondary IP Address | <input type="text"/> |
| | | <input type="checkbox"/> Force router to use address for DNS | |

Configuration for VigorSwitch 2240:

1. Open **Vlan>>Tag-based Group**.
2. Add four VID groups. In this case, we can explain it with Port 15, 16, 17, 18 and Trunk Port 23.

VLAN Name 2920-VID7, Port Members = 15 、 23

VLAN Name 2920-VID8, Port Members = 16 、 23

VLAN Name 2920-VID9, Port Members = 17 、 23

VLAN Name 2920-VID10, Port Members = 18 、 23

3. Open **Vlan>>Ports** and set the VID value with role for each Port:

Port 15 VID = 7 Role = Access

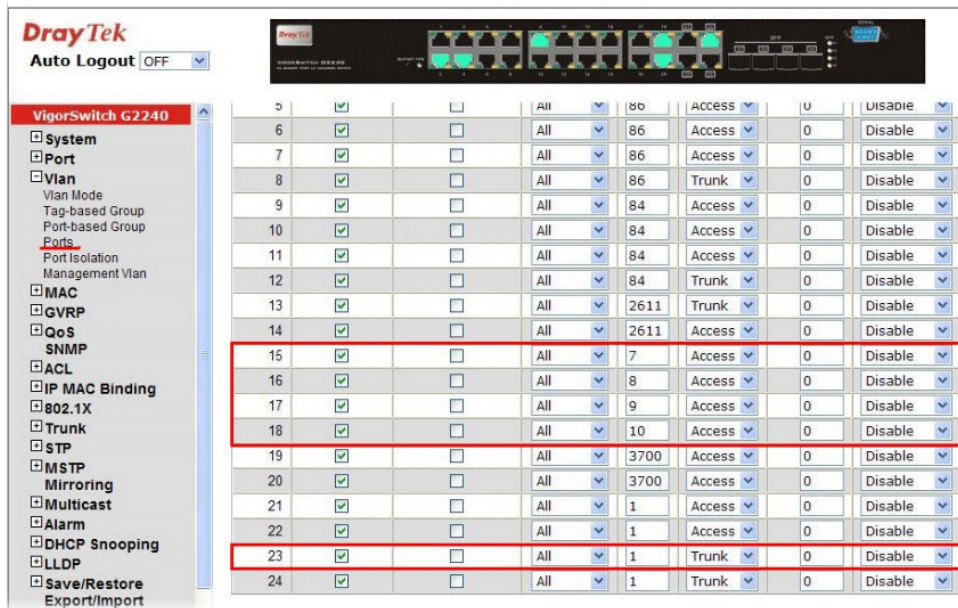

Port 16 VID = 8 Role = Access

Port 17 VID = 9 Role = Access

Port 18 VID = 10 Role = Access

Port 23 VID = 1 Role = Trunk

Port 23 is set with Trunk in this example and will transfer the packets with VLAN Tag information. That is, packets with VID 7, 8, 9 and 10 will be transferred to Vigor2920 by Port 23 and VID information will be retained.

- After finishing the above configuration, the equipment connecting to VigorSwitch Port 15, 16, 17 and 18 can get the corresponding IP address(es) of the network segment.

The equipment connecting to VigorSwitch Port 15 can get the IP address of 192.168.1.0/24

The equipment connecting to VigorSwitch Port 16 can get the IP address of 192.168.2.0/24

The equipment connecting to VigorSwitch Port 17 can get the IP address of 192.168.3.0/24

The equipment connecting to VigorSwitch Port 18 can get the IP address of 192.168.4.0/24

- To make any two of VLAN groups of Tag Based VLAN linked with each other, just check the boxes of the ones in the field of **Inter-LAN Routing** in the page of **LAN >> General Setup**. Refer to the following figure. LAN2 and LAN3 are linked.

LAN >> General Setup

General Setup

| Index | Status | DHCP | IP Address | |

3.5 How to Customize Your Login Page

Login page can be customized to fit the request of the administrator.

1. Open **User Management>>General Setup**. Set **User-Based** as the Mode and click **OK** to save the settings.

2. Open **User Management>>User Profile** to create a new user profile.

User Management >> User Profile

User Profile Table [Set to Factory Default](#)

| Profile | Name | Profile | Name |
|--------------------|--------------------|---------------------|------|
| 1. | admin | 17. | |
| 2. | System Reservation | 18. | |
| 3. | | 19. | |
| 4. | | 20. | |
| 5. | | 21. | |
| 6. | | 22. | |
| 7. | | 23. | |
| 8. | | 24. | |
| 9. | | 25. | |

3. Click any link (e.g., #3) to access into the following page. Type a User Name and a Password. Then, click **OK**.

User Management >> User Profile

Log:

- Open **System Maintenance>>Login Page Greeting**. Check the box to enable this function. Type a brief description (e.g., *Just for Carrie*) in the field of **Login Description** which will be shown on the heading of the login dialog. Next, click **OK**.

System Maintenance >> Login Page Greeting

Login Page Greeting

Enable

Login Page Title (31 char max.)

Welcome Message and Bulletin (Max 511 characters) [Preview](#) | [Set to Factory Default](#) |

```
<h1><b><font color=red>Vigor</font></b></h1><p>Welcome to Draytek world. </p>
```

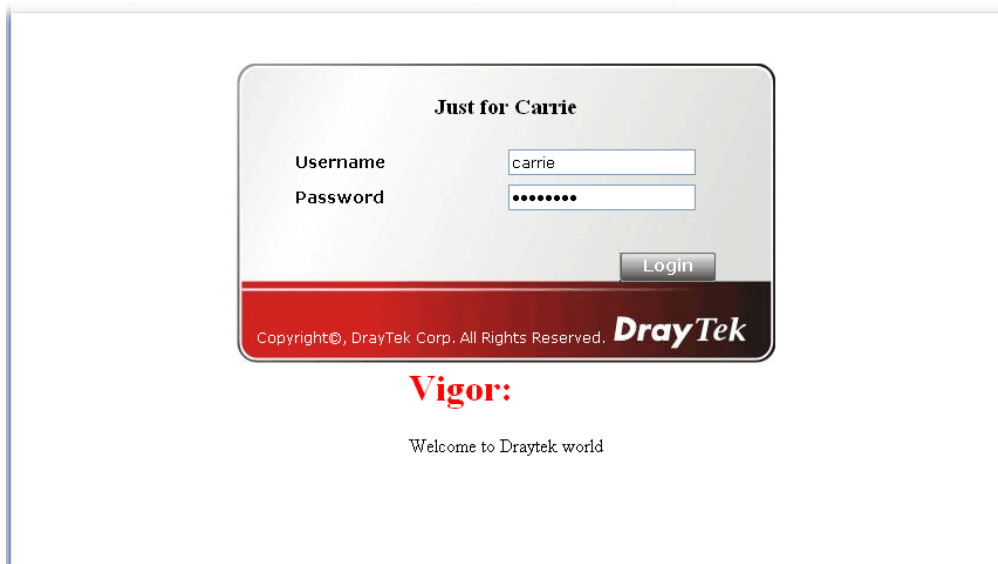

Examples of Welcome Message and Bulletin:

```
<h1><b><font color=red>Welcome Message</font></b></h1>
<p>Message</p>
```

OK Cancel

Note that do not type URL redirect link in Bulletin box.

- Open a new tab in the same browser (for IE 7.0/FireFox and above) or open a new web browser.
- Try to access into the web user interface (e.g., 192.168.1.1) of Vigor router. Please note “*Just for Carrie*” is displayed as a heading on the login dialog box.

- After typing the username and password (defined in **User Management>>User Profile**), click **Login**. You can access into Internet or access into the **Landing Page** if configured in **User Management>>General Setup**.

3.6 How to use SmartMonitor with Vigor2920 series

For the models that support SmartMonitor, you can connect the device installed with SmartMonitor to the monitor port of Vigor router, then all the traffic in other LAN port will forward to the monitor port. But, there is no hardware monitor port for Vigor2920 series. Therefore we need to configure mirror port setting in the web user interface of Vigor2920 for using SmartMonitor.

1. Please go to **LAN > LAN Port Mirror** to setup the mirror port.

LAN >> LAN Port Mirror

LAN Port Mirror

Port Mirror:
 Enable Disable

Mirror port:
 P2 P3 P4

Mirrored port:
 P1 P2 P3 P4

Note: The selected mirror port will only serve debug purposes and should not be used as a part of the LAN.

OK

2. Please enable the Port Mirror function first.
3. Select the Mirror port and Mirrored port, the traffics of mirrored ports will be forwarded to mirror port. For example, if we select **P2** as mirror port and mirrored ports are P1, P3 and P4, then P1, P3 and P4 will forward the traffic to P2.

When the LAN Port Mirror is configured correctly, just connect the PC installed with SmartMonitor to the mirror port.

Note: Please pay attention that the mirror port will fail to get IP from Vigor2920. It means that any computer connects to mirror port can not access Vigor2920 or Internet, and only can be used as a “monitor” device.

3.7 Create a LAN-to-LAN Connection Between Remote Office and Headquarter

The most common case is that you may want to connect to network securely, such as the remote branch office and headquarter. According to the network structure as shown in the below illustration, you may follow the steps to create a LAN-to-LAN profile. These two networks (LANs) should NOT have the same network address.

Settings in Router A in headquarter:

1. Go to **VPN and Remote Access** and select **Remote Access Control** to enable the necessary VPN service and click **OK**.
2. Then,
For using **PPP** based services, such as PPTP, L2TP, you have to set general settings in **PPP General Setup**.

[VPN and Remote Access >> PPP General Setup](#)

| PPP General Setup | |
|--|---|
| PPP/MP Protocol | |
| Dial-In PPP Authentication | <input type="text" value="PAP or CHAP"/> |
| Dial-In PPP Encryption (MPPE) | <input type="text" value="Optional MPPE"/> |
| Mutual Authentication (PAP) | <input type="radio"/> Yes <input checked="" type="radio"/> No |
| Username | <input type="text"/> |
| Password | <input type="text"/> |
| IP Address Assignment for Dial-In Users (When DHCP Disable set) | |
| Assigned IP start | LAN 1 <input type="text" value="192.168.1.200"/> |
| | LAN 2 <input type="text" value="192.168.2.200"/> |
| | LAN 3 <input type="text" value="192.168.3.200"/> |
| | LAN 4 <input type="text" value="192.168.4.200"/> |

OK

For using **IPSec**-based service, such as IPSec or L2TP with IPSec Policy, you have to set general settings in **IPSec General Setup**, such as the pre-shared key that both parties have known.

VPN and Remote Access >> IPSec General Setup

VPN IKE/IPSec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

| | |
|---|--|
| IKE Authentication Method | |
| Pre-Shared Key | <input type="password" value="•••••"/> |
| Confirm Pre-Shared Key | <input type="password" value="•••••"/> |
| IPSec Security Method | |
| <input checked="" type="checkbox"/> Medium (AH) | Data will be authentic, but will not be encrypted. |
| High (ESP) | <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES |
| Data will be encrypted and authentic. | |

3. Go to **LAN-to-LAN**. Click on one index number to edit a profile.
4. Set **Common Settings** as shown below. You should enable both of VPN connections because any one of the parties may start the VPN connection.

VPN and Remote Access >> LAN to LAN

Profile Index : 1

1. Common Settings

| | |
|---|---|
| Profile Name <input type="text" value="Branch 1"/> | Call Direction <input checked="" type="radio"/> Both <input type="radio"/> Dial-Out <input type="radio"/> Dial-in |
| <input type="checkbox"/> Enable this profile | <input type="checkbox"/> Always on |
| VPN Dial-Out Through <input type="text" value="WAN1 First"/> | Idle Timeout <input type="text" value="300"/> second(s) |
| Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block | <input type="checkbox"/> Enable PING to keep alive |
| | PING to the IP <input type="text"/> |

- Set **Dial-Out Settings** as shown below to dial to connect to Router B aggressively with the selected Dial-Out method.

If an **IPSec-based** service is selected, you should further specify the remote peer IP Address, IKE Authentication Method and IPSec Security Method for this Dial-Out connection.

2. Dial-Out Settings

| | |
|---|---|
| <p>Type of Server I am calling</p> <p><input type="radio"/> PPTP</p> <p><input checked="" type="radio"/> IPSec Tunnel</p> <p><input type="radio"/> L2TP with IPSec Policy None</p> <p>Dial Number for ISDN or Server IP/Host Name for VPN. |---|--|

6. Set **Dial-In settings** to as shown below to allow Router B dial-in to build VPN connection.

If an **IPSec-based** service is selected, you may further specify the remote peer IP Address, IKE Authentication Method and IPSec Security Method for this Dial-In connection. Otherwise, it will apply the settings defined in **IPSec General Setup** above.

3. Dial-In Settings

| | |
|--|---|
| <p>Allowed Dial-In Type</p> <p><input type="checkbox"/> PPTP</p> <p><input checked="" type="checkbox"/> IPSec Tunnel</p> <p><input type="checkbox"/> L2TP with IPSec Policy None</p> | <p>Username <input data-bbox="1182 495 1414 528" type="text" value="???"/></p> <p>Password <input data-bbox="1182 539 1398 573" type="password"/></p> <p>VJ Compression <input checked="" type="radio"/> On <input type="radio"/> Off</p> |
| <p><input checked="" type="checkbox"/> Specify Remote VPN Gateway</p> <p>Peer VPN Server IP</p> <p><input data-bbox="400 752 628 786" type="text" value="220.135.240.210"/></p> <p>or Peer ID <input data-bbox="504 797 735 831" type="text"/></p> | <p>IKE Authentication Method</p> <p><input checked="" type="checkbox"/> Pre-Shared Key</p> <p>IKE Pre-Shared Key <input data-bbox="1182 707 1398 741" type="text"/></p> <p><input type="checkbox"/> Digital Signature(X.509)</p> <p>None</p> |
| | <p>IPSec Security Method</p> <p><input checked="" type="checkbox"/> Medium(AH)</p> <p>High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES</p> |

If a **PPP-based service** is selected, you should further specify the remote peer IP Address, Username, Password, and VJ Compression for this Dial-In connection.

3. Dial-In Settings

| | |
|--|---|
| <p>Allowed Dial-In Type</p> <p><input checked="" type="checkbox"/> PPTP</p> <p><input type="checkbox"/> IPSec Tunnel</p> <p><input type="checkbox"/> L2TP with IPSec Policy None</p> | <p>Username <input data-bbox="1182 1167 1414 1200" type="text" value="draytek"/></p> <p>Password <input data-bbox="1182 1211 1398 1245" type="password" value="*****"/></p> <p>VJ Compression <input checked="" type="radio"/> On <input type="radio"/> Off</p> |
| <p><input checked="" type="checkbox"/> Specify Remote VPN Gateway</p> <p>Peer VPN Server IP</p> <p><input data-bbox="400 1424 628 1458" type="text" value="220.135.240.210"/></p> <p>or Peer ID <input data-bbox="504 1469 735 1503" type="text"/></p> | <p>IKE Authentication Method</p> <p><input checked="" type="checkbox"/> Pre-Shared Key</p> <p>IKE Pre-Shared Key <input data-bbox="1182 1379 1398 1413" type="text"/></p> <p><input type="checkbox"/> Digital Signature(X.509)</p> <p>None</p> |
| | <p>IPSec Security Method</p> <p><input checked="" type="checkbox"/> Medium(AH)</p> <p>High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES</p> |

- At last, set the remote network IP/subnet in **TCP/IP Network Settings** so that Router A can direct the packets destined to the remote network to Router B via the VPN connection.

4. TCP/IP Network Settings

| | | | |
|-------------------------------------|--|--|--|
| My WAN IP | <input type="text" value="0.0.0.0"/> | RIP Direction | <input type="button" value="Disable"/> |
| Remote Gateway IP | <input type="text" value="0.0.0.0"/> | From first subnet to remote network, you have to do | |
| Remote Network IP | <input type="text" value="192.168.2.0"/> | <input type="button" value="Route"/> | |
| Remote Network Mask | <input type="text" value="255.255.255.0"/> | <input type="checkbox"/> Change default route to this VPN tunnel (Only single WAN supports this) | |
| <input type="button" value="More"/> | | | |

Settings in Router B in the remote office:

- Go to **VPN and Remote Access** and select **Remote Access Control** to enable the necessary VPN service and click **OK**.
- Then, for using **PPP based** services, such as PPTP, L2TP, you have to set general settings in **PPP General Setup**.

VPN and Remote Access >> PPP General Setup

PPP General Setup

| | | | |
|-------------------------------|---|--|--|
| PPP/MP Protocol | | IP Address Assignment for Dial-In Users (When DHCP Disable set) | |
| Dial-In PPP Authentication | <input type="button" value="PAP or CHAP"/> | Assigned IP range | <input type="text" value="192.168.2.200"/> |
| Dial-In PPP Encryption (MPPE) | <input type="button" value="Optional MPPE"/> | | |
| Mutual Authentication (PAP) | <input type="radio"/> Yes <input checked="" type="radio"/> No | | |
| Username | <input type="text"/> | | |
| Password | <input type="text"/> | | |

For using **IPSec-based** service, such as IPSec or L2TP with IPSec Policy, you have to set general settings in **IPSec General Setup**, such as the pre-shared key that both parties have known.

VPN and Remote Access >> IPSec General Setup

3.8 Create a Remote Dial-in User Connection Between the Teleworker and Headquarter

The other common case is that you, as a teleworker, may want to connect to the enterprise network securely. According to the network structure as shown in the below illustration, you may follow the steps to create a Remote User Profile and install Smart VPN Client on the remote host.

Settings in VPN Router in the enterprise office:

1. Go to **VPN and Remote Access** and select **Remote Access Control** to enable the necessary VPN service and click **OK**.
2. Then, for using PPP based services, such as PPTP, L2TP, you have to set general settings in **PPP General Setup**.

VPN and Remote Access >> PPP General Setup

PPP General Setup

| | | |
|-------------------------------|---|---|
| PPP/MP Protocol | | IP Address Assignment for Dial-In Users (When DHCP Disable set) |
| Dial-In PPP Authentication | PAP or CHAP | Assigned IP range |
| Dial-In PPP Encryption (MPPE) | Optional MPPE | 192.168.1.200 |
| Mutual Authentication (PAP) | <input type="radio"/> Yes <input checked="" type="radio"/> No | |
| Username | <input type="text"/> | |
| Password | <input type="text"/> | |

OK

For using IPsec-based service, such as IPsec or L2TP with IPsec Policy, you have to set general settings in **IKE/IPsec General Setup**, such as the pre-shared key that both parties have known.

VPN and Remote Access >> IPSec General Setup

VPN IKE/IPSec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

| | |
|---|--|
| IKE Authentication Method | |
| Pre-Shared Key | |
| Confirm Pre-Shared Key | |
| IPSec Security Method | |
| <input checked="" type="checkbox"/> Medium (AH) | Data will be authentic, but will not be encrypted. |
| High (ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES | Data will be encrypted and authentic. |

OK Cancel

3. Go to **Remote Dial-In User**. Click on one index number to edit a profile.
4. Set **Dial-In** settings to as shown below to allow the remote user dial-in to build VPN connection.

If an *IPSec-based* service is selected, you may further specify the remote peer IP Address, IKE Authentication Method and IPSec Security Method for this Dial-In connection. Otherwise, it will apply the settings defined in **IPSec General Setup** above.

VPN and Remote Access >> Remote Dial-in User

Index No. 1

| | |
|--|--|
| User account and Authentication | Username: ??? |
| <input type="checkbox"/> Enable this account | Password: |
| Idle Timeout: 300 second(s) | |
| Allowed Dial-In Type | IKE Authentication Method |
| <input type="checkbox"/> PPTP | <input checked="" type="checkbox"/> Pre-Shared Key |
| <input checked="" type="checkbox"/> IPSec Tunnel | IKE Pre-Shared Key: |
| <input type="checkbox"/> L2TP with IPSec Policy: None | <input type="checkbox"/> Digital Signature(X.509) |
| <input type="checkbox"/> Specify Remote Node | None |
| Remote Client IP or Peer ISDN Number: | IPSec Security Method |
| or Peer ID: | <input checked="" type="checkbox"/> Medium(AH) |
| Netbios Naming Packet: <input checked="" type="radio"/> Pass <input type="radio"/> Block | High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES |
| | Local ID (optional): |

OK Clear Cancel

If a **PPP-based** service is selected, you should further specify the remote peer IP Address, Username, Password, and VJ Compression for this Dial-In connection.

VPN and Remote Access >> Remote Dial-in User

Index No. 1

| | | |
|--|--|--|
| <p>User account and Authentication</p> <input type="checkbox"/> Enable this account Idle Timeout: <input type="text" value="300"/> second(s) | | Username: <input type="text" value="???"/> Password: <input type="password"/> |
| <p>Allowed Dial-In Type</p> <input checked="" type="checkbox"/> PPTP <input type="checkbox"/> IPsec Tunnel <input type="checkbox"/> L2TP with IPsec Policy: <input type="text" value="None"/> | | <p>IKE Authentication Method</p> <input checked="" type="checkbox"/> Pre-Shared Key IKE Pre-Shared Key: <input type="text"/> <input type="checkbox"/> Digital Signature(X.509) <input type="text" value="None"/> |
| <input type="checkbox"/> Specify Remote Node Remote Client IP or Peer ISDN Number: <input type="text"/> or Peer ID: <input type="text"/> Netbios Naming Packet: <input checked="" type="radio"/> Pass <input type="radio"/> Block | | <p>IPsec Security Method</p> <input checked="" type="checkbox"/> Medium(AH) High(ESP): <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES Local ID (optional): <input type="text"/> |

Settings in the remote host:

- For Win98/ME, you may use "Dial-up Networking" to create the PPTP tunnel to Vigor router. For Win2000/XP, please use "Network and Dial-up connections" or "Smart VPN Client", complimentary software to help you create PPTP, L2TP, and L2TP over IPsec tunnel. You can find it in CD-ROM in the package or go to www.DrayTek.com download center. Install as instructed.
- After successful installation, for the first time user, you should click on the **Step 0. Configure** button. Reboot the host.

- In **Step 2. Connect to VPN Server**, click **Insert** button to add a new entry.

If an IPsec-based service is selected as shown below,

You may further specify the method you use to get IP, the security method, and authentication method. If the Pre-Shared Key is selected, it should be consistent with the one set in VPN router.

If a PPP-based service is selected, you should further specify the remote VPN server IP address, Username, Password, and encryption method. The User Name and Password should be consistent with the one set up in the VPN router. To use default gateway on remote network means that all the packets of remote host will be directed to VPN server then forwarded to Internet. This will make the remote host seem to be working in the enterprise network.

4. Click **Connect** button to build connection. When the connection is successful, you will find a green light on the right down corner.

3.9 QoS Setting Example

Assume a teleworker sometimes works at home and takes care of children. When working time, he would use Vigor router at home to connect to the server in the headquarter office downtown via either HTTPS or VPN to check email and access internal database. Meanwhile, children may chat on Skype in the restroom.

1. Go to **Bandwidth Management>>Quality of Service**.

Bandwidth Management >> Quality of Service

| General Setup | | | | | | | | | | Set to Factory Default | |
|---------------|---------|---------------------|-----------|---------|---------|---------|--------|-----------------------|-------------------|--|--|
| Index | Status | Bandwidth | Direction | Class 1 | Class 2 | Class 3 | Others | UDP Bandwidth Control | Online Statistics | | |
| WAN1 | Disable | 10000Kbps/10000Kbps | | 25% | 25% | 25% | 25% | Inactive | Status | Setup | |
| WAN2 | Disable | 10000Kbps/10000Kbps | | 25% | 25% | 25% | 25% | Inactive | Status | Setup | |
| WAN3 | Disable | 10000Kbps/10000Kbps | | 25% | 25% | 25% | 25% | Inactive | Status | Setup | |

-----END CERTIFICATE REQUEST-----

```

- Connect to CA server via web browser. Follow the instruction to submit the request. Below we take a Windows 2000 CA server for example. Select **Request a Certificate**.

Microsoft Certificate Services -- vigor Home

Welcome

You use this web site to request a certificate for your web browser, e-mail client, or other secure program. Once you acquire a certificate, you will be able to securely identify yourself to other people over the web, sign your e-mail messages, encrypt your e-mail messages, and more depending upon the type of certificate you request.

Select a task:

- Retrieve the CA certificate or certificate revocation list
- Request a certificate
- Check on a pending certificate

Select **Advanced request**.

Microsoft Certificate Services -- vigor Home

Choose Request Type

Please select the type of request you would like to make:

User certificate request

Advanced request

[Next >](#)

Select **Submit a certificate request a base64 encoded PKCS #10 file or a renewal request using a base64 encoded PKCS #7 file**

Microsoft Certificate Services -- vigor Home

Advanced Certificate Requests

You can request a certificate for yourself, another user, or a computer using one of the following methods. Note that the policy of the certification authority (CA) will determine the certificates that you can obtain.

Submit a certificate request to this CA using a form.

Submit a certificate request using a base64 encoded PKCS #10 file or a renewal request using a base64 encoded PKCS #7 file.

Request a certificate for a smart card on behalf of another user using the Smart Card Enrollment Station.
You must have an enrollment agent certificate to submit a request for another user.

[Next >](#)

Import the X509 Local Certificate Request text file. Select **Router (Offline request)** or **IPSec (Offline request)** below.

Microsoft Certificate Services -- vigor Home

Submit A Saved Request

Paste a base64 encoded PKCS #10 certificate request or PKCS #7 renewal request generated by an external application (such as a web server) into the request field to submit the request to the certification authority (CA).

Saved Request:

Base64 Encoded Certificate Request (PKCS #10 or #7):

```
-----BEGIN CERTIFICATE REQUEST-----
MIIBqjCCARCAQAwQTELHAKGA1UEBhMCVFcxEEDAO
BgkqhkiG9w0BCQEWEXBzYXNzQGRyYX10ZU9uY29t
A4GNADCB1QKBgQDQYB7mmZFfFhN9/ IeQnG03Xk++
hX4bp89cUF9d1oACGG1M/tcBoekdcZdPFFvIXcP3
x/G0A7CTv0/fQzpxroCw1JTjLSjS0/Bn9v50951G
-----END CERTIFICATE REQUEST-----
```

[Browse](#) for a file to insert.

Certificate Template:

Administrator

Additional Attributes:

Router (Offline request)

[Submit >](#)

Then you have done the request and the server now issues you a certificate. Select **Base 64 encoded certificate** and **Download CA certificate**. Now you should get a certificate (.cer file) and save it.

- Back to Vigor router, go to **Local Certificate**. Click **IMPORT** button and browse the file to import the certificate (.cer file) into Vigor router. When finished, click refresh and you will find the below window showing “-----BEGIN CERTIFICATE-----.....”

Certificate Management >> Local Certificate

| Valid From : | Aug 30 23:08:43 2005 GMT |
| Valid To : | Aug 30 23:17:47 2007 GMT |

Note: Before setting certificate configuration, please go to **System Maintenance >> Time and Date** to reset current time of the router first.

3.12 Creating an Account for MyVigor

The website of MyVigor (a server located on <http://myvigor.draytek.com>) provides several useful services (such as Web Content Filter) to filtering the web pages for the sake of protecting your system.

In general, **Service Activation Wizard** can activate WCF service for the router by using simple steps. However, if you (for example, a company) purchase several different routers and activate the services respectively, you might need an account to achieve the goal of management.

Please follow the sections below to create an account for MyVigor.

3.12.1 Creating an Account via Vigor Router

1. Click **CSM>> Web Content Filter Profile**. The following page will appear.

CSM >> Web Content Filter Profile

Web-Filter License [Activate](#)
[Status:Not Activated]

| | | |
|--------------------|---------------|---------------------------|
| Setup Query Server | auto-selected | Find more |
| Setup Test Server | auto-selected | Find more |

MyVigor for you

MyVigor website replaces the VigorPro site as DrayTek's portal site for the latest products and services in network security, including Anti-Virus, Anti-Spam, Web Content Filter... etc. The products and functions that are supported in this site include:

VigorPro Unified Security Firewall series:

- Activation of Commtouch™ GlobalView Web Content Filter license key
- Activation of DT Anti-Virus license key
- Activation of Kaspersky Anti-Virus license key
- Activation of Commtouch™ Anti-Spam license key and membership

Vigor routers (for models that support Commtouch™)

- Activation of Commtouch™ GlobalView Web Content Filter license key

The MyVigor website contains a trial version of Commtouch™ GlobalView Web Content Filter, which allows the users to set filters to block out undesirable web pages in the Internet jungle.

More customer-oriented services are planned for MyVigor site for the near future.

Please use IE 5.0 or above (resolution 1024 * 768) for best display. © DrayTek Corp.

MyVigor Agreement

1. Agreement

Draytek provides MyVigor(myvigor.draytek.com) service according to this agreement. When you use MyVigor service, it means that you have read, understand and agree to accept the items listed in this agreement. Draytek can modify or change the content of the items without any reasons. It is suggested for you to notice the modifications or changes at any time. If you still use MyVigor service after knowing the modifications and changes of this service, it means you have read, understand and agree to accept the modifications and changes. If you do not agree the content of this agreement, please stop using MyVigor service.

2. Registration

To use this service, you have to agree the following conditions:

(a) Provide your complete and correct information according to the registration steps of this service.

(b) If you provide any incorrect or fake information here, DrayTek has the right to pause or terminate your account.

I have read and understand the above Agreement. (Use the scroll bar to view the entire agreement)

<< Back Accept >>

3. Type your personal information in this page and then click **Continue**.

If you are having difficulty logging in, contact our customer service.
Customer Service : (886) 3 597 2727 or
email to : webmaster@draytek.com

Now, click **Login**. Your account has been activated. You can access into MyVigor server to activate the service (e.g., WCF) that you want.

4 Advanced Web Configuration

This chapter will guide users to execute advanced (full) configuration through admin mode operation.

1. Open a web browser on your PC and type **http://192.168.1.1**. The window will ask for typing username and password.
2. Please type “admin/admin” on Username/Password for administration operation.

Now, the **Main Screen** will appear. Be aware that “Admin mode” will be displayed on the bottom left side.

4.1 WAN

Quick Start Wizard offers user an easy method to quick setup the connection mode for the router. Moreover, if you want to adjust more settings for different WAN modes, please go to **WAN** group.

4.1.1 Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC

has reserved certain addresses that will never be registered publicly. These are known as *private* IP addresses, and are listed in the following ranges:

From 10.0.0.0 to 10.255.255.255

From 172.16.0.0 to 172.31.255.255

From 192.168.0.0 to 192.168.255.255

What are Public IP Address and Private IP Address

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default **private IP** address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a **public IP** address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

Get Your Public IP Address from ISP

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

When a router begins to connect to your ISP, a serial of discovery process will occur to ask for a connection. Then a session will be created. Your user ID and password is authenticated via **PAP** or **CHAP** with **RADIUS** authentication system. And your IP address, DNS server, and other related information will usually be assigned by your ISP.

Network Connection by 3G USB Modem

For 3G mobile communication through Access Point is popular more and more, Vigor2920 adds the function of 3G network connection for such purpose. By connecting 3G USB Modem to the USB port of Vigor2920, it can support HSDPA/UMTS/EDGE/GPRS/GSM and the future 3G standard (HSUPA, etc). Vigor2920n/Vn with 3G USB Modem allows you to receive 3G signals at any place such as your car or certain location holding outdoor activity and share the bandwidth for using by more people. Users can use four LAN ports on the router to access Internet. Also, they can access Internet via 802.11n wireless function of Vigor2920/Vn, and enjoy the powerful firewall, bandwidth management, VPN features of Vigor2920n/Vn series.

After connecting into the router, 3G USB Modem will be regarded as the third WAN port. However, the original Ethernet WAN1/WAN2 still can be used and Load-Balance can be done in the router. Besides, 3G USB Modem in WAN3 also can be used as backup device. Therefore, when WAN1/WAN2 is not available, the router will use 3.5G for supporting automatically. The supported 3G USB Modem will be listed on Draytek web site. Please visit www.draytek.com for more detailed information.

Network Connection by IPv6

Due to the shortage of IPv4 address, more and more countries use IPv6 to solve the problem. However, to continually use the original rich resources of IPv4, both IPv6 and IPv4 networks shall communicate for each other via intercommunication mechanism to complete the shifting job from IPv4 to IPv6 gradually. At present, there are three common types of intercommunication mechanisms:

- **Dual Stack**

The user can use both IPv4 and IPv6 techniques at the same time. That means adding an IPv6 stack on the origin network layer to let the host own the communication capability of IPv4 and IPv6.

- **Tunnel**

Both IPv6 hosts can communication for each other via existing IPv4 network environment. The IPv6 packets will be encapsulated with the header of IPv4 first. Later, the packets will be transformed and judged by IPv4 router. Once the packets arrive the border between IPv4 and IPv6, the header of IPv4 on the packets will be removed. Then, the packets with IPv6 address will be forwarded to the destination of IPv6 network.

- **Translation**

Such feature is active only for the user who uses IPv4 to communicate with other user using IPv4 service.

Before configuring the settings on Vigor2920, you need to know which connection type that your IPv6 service used.

Note: For the IPv6 service, you have to configure WAN/LAN settings before using the service.

Below shows the menu items for **WAN**.

4.1.2 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN1, WAN2 and WAN3 in details.

This router supports multiple-WAN function. It allows users to access Internet and combine the bandwidth of the multiple-WAN to speed up the transmission through the network. Each WAN port can connect to different ISPs even if the ISPs use different technology to provide telecommunication service (such as Cable modem). If any connection problem occurred on one of the ISP connections, all the traffic will be guided and switched to the normal communication port for proper operation. Please configure WAN1, WAN2 and WAN3 settings.

This webpage allows you to set general setup for WAN1, WAN2 and WAN3 respectively.

Note: In default, WAN1 is enabled. WAN2 is optional.

WAN >> General Setup

Load Balance Mode:

| Setup | | | | |
|----------------------|--------|---------------------------|----------------------------------|-------------|
| Index | Enable | Physical Mode/Type | Line Speed(Kbps) DownLink/UpLink | Active Mode |
| WAN1 | V | Ethernet/Auto negotiation | 0/0 | Always On |
| WAN2 | V | Ethernet/Auto negotiation | 0/0 | Always On |
| WAN3 | V | USB/- | 0/0 | Always On |

Note: Line Speed only used for load balance mode: according to Line Speed

OK

Each item is explained as follows:

| Item | Description |
|-----------------------------|--|
| Load Balance Mode | <p>This option is available for multiple-WAN for getting enough bandwidth for each WAN port. If you know the practical bandwidth for your WAN interface, please choose the setting of According to Line Speed. Otherwise, please choose Auto Weight to let the router reach the best load balance.</p> <p>Load Balance Mode: <input type="text" value="Auto Weight"/> <input type="text" value="Auto Weight"/> <input type="text" value="According to Line Speed"/></p> |
| Index | Click the WAN interface link under Index to access into the WAN configuration page. |
| Enable | V means such WAN interface is enabled and ready to be used. |
| Physical Mode / Type | Display the physical mode and physical type of such WAN interface. |
| Line Speed | Display the downstream and upstream rate of such WAN interface. |
| Active Mode | Display whether such WAN interface is connected and allows to access into Internet always, or such WAN interface will be treated as backup WAN interface. |

Note: In default, each WAN port is enabled.

Detailed Settings for WAN1/WAN2 Interface (via Ethernet)

Be aware that WAN2 is fixed with physical mode of Giga Ethernet.

WAN >> General Setup

WAN 1

| | |
|---|---|
| Enable: | Yes ▾ |
| Display Name: | <input type="text"/> |
| Physical Mode: | Ethernet |
| Physical Type: | Auto negotiation ▾ |
| Line Speed(Kbps): | |
| DownLink | <input type="text" value="0"/> |
| UpLink | <input type="text" value="0"/> |
| VLAN Tag insertion : | Disable ▾ |
| Tag value: | <input type="text" value="0"/> (0~4095) |
| Priority: | <input type="text" value="0"/> (0~7) |
| Active Mode: | Backup ▾ |
| | <input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 2 <input type="checkbox"/> WAN 3 |

Available settings are explained as follows:

| Item | Description |
|---------------------------|--|
| Enable | Choose Yes to invoke the settings for this WAN interface. Choose No to disable the settings for this WAN interface. |
| Display Name | Type the description for such WAN interface. |
| Physical Mode | Display the physical mode of such WAN interface. |
| Physical Type | You can change the physical type for WAN2 or choose Auto negotiation for determined by the system. Physical Type:  |
| Line Speed | Type the real line speed for downloading and uploading for such WAN interface. The unit is kbps. |
| VLAN Tag insertion | <p>Enable – Enable the function of VLAN with tag.</p> <p>The router will add specific VLAN number to all packets on the WAN while sending them out.</p> <p>Please type the tag value and specify the priority for the packets sending by WAN1.</p> <p>Disable – Disable the function of VLAN with tag.</p> <p>Tag value – Type the value as the VLAN ID number. The</p> |

| | |
|---|--|
| | <p>range is from 0 to 4095.</p> <p>Priority – Type the packet priority number for such VLAN. The range is from 0 to 7.</p> |
| <p>Active Mode and Backup Type</p> | <p>Active Mode – Determine the WAN interface will be active for always (Always On) or be treated as a backup WAN interface (Backup Type).</p> <div data-bbox="673 454 853 568" style="border: 1px solid black; padding: 2px;"> <p>Always On ▾</p> <p>Always On</p> <p>Backup</p> </div> <p>Backup Type – Determine the role of such WAN interface. It will be changed according to the Active Mode specified.</p> <p>If you choose Always On as Active Mode, such interface will be used for access into Internet all the time.</p> <p>If you choose Backup as the Active Mode, you have to specify which WAN interface will be selected to backup multiple WANs. However, ignore this setting if you want to backup a single WAN.</p> <div data-bbox="673 913 1316 1041" style="border: 1px solid black; padding: 5px;"> <p>Active Mode: Backup ▾</p> <p style="text-align: right;"><input type="checkbox"/> WAN 1 <input checked="" type="checkbox"/> WAN 2 <input type="checkbox"/> WAN 3</p> <p>Backup Type (Only for Backup Multiple WAN): <input checked="" type="radio"/> When any WAN disconnect <input type="radio"/> When all WAN disconnect</p> </div> <p>When any WAN disconnect – Such backup WAN will be activated when any master WAN interface disconnects.</p> <p>When all WAN disconnect – Such backup WAN will be activated only when all master WAN interfaces disconnect.</p> |

After finished the above settings, click **OK** to save the settings.

Detailed Settings for WAN3 Interface (via USB)

To use 3G network connection through 3G USB Modem, please configure **WAN3** interface.

WAN >> General Setup

WAN 3

| | |
|---|---|
| Enable: | Yes ▾ |
| Display Name: | <input type="text"/> |
| Physical Mode: | USB |
| Physical Type: | Auto negotiation ▾ |
| Line Speed(Kbps): | |
| DownLink | <input type="text" value="0"/> |
| UpLink | <input type="text" value="0"/> |
| Active Mode: | Backup ▾ |
| | <input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 2 <input type="checkbox"/> WAN 3 |
| Backup Type (Only if acting as backup for multiple WAN): | <input checked="" type="radio"/> When any of selected WAN disconnect <input type="radio"/> When all of selected WAN disconnect |

Available settings are explained as follows:

| Item | Description |
|------------------------------------|---|
| Enable | Choose Yes to invoke the settings for this WAN interface. Choose No to disable the settings for this WAN interface. |
| Display Name | Type the description for such WAN interface. |
| Physical Mode | Display the physical mode of such WAN interface. |
| Physical Type | In such WAN interface, no type can be selected. |
| Line Speed | Type the line speed for downloading and uploading for such WAN interface. The unit is kbps. |
| Active Mode and Backup Type | <p>Active Mode – Determine the WAN interface will be active for always (Always On) or be treated as a backup WAN interface (Backup WAN).</p> <div style="border: 1px solid black; padding: 2px; width: fit-content;"> Always On ▾ Always On Backup </div> <p>Backup Type – Determine the role of such WAN interface. It will be changed according to the Active Mode specified.</p> <p>If you choose Always On as Active Mode, such interface will be used for access into Internet all the time.</p> <p>If you choose Backup as the Active Mode, you have to specify which WAN interface will be selected to backup multiple WANs. However, ignore this setting if you want to backup a single WAN.</p> |

| | |
|--|---|
| | Active Mode: Backup ▾ <input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 2 <input type="checkbox"/> WAN 3 Backup Type (Only for Backup Multiple WAN): <input checked="" type="radio"/> When any WAN disconnect <input type="radio"/> When all WAN disconnect When any WAN disconnect – Such backup WAN will be activated when any master WAN interface disconnects. When all WAN disconnect – Such backup WAN will be activated only when all master WAN interfaces disconnect. |
|--|---|

After finished the above settings, click **OK** to save the settings.

4.1.3 Internet Access

For the router supports multi-WAN function, the users can set different WAN settings (for WAN1/WAN2/WAN3) for Internet Access. Due to different Physical Mode for WAN interfaces, the Access Mode for these connections also varies. Refer to the following figures

WAN >> Internet Access

Internet Access

| Index | Display Name | Physical Mode | Access Mode | Details Page | IPv6 |
|-------|--------------|---------------|-----------------------------------|--------------|------|
| WAN1 | | Ethernet | Static or Dynamic IP ▾ | Details Page | IPv6 |
| WAN2 | | Ethernet | None PPPoE | Details Page | IPv6 |
| WAN3 | | USB | Static or Dynamic IP PPTP/L2TP | Details Page | IPv6 |

Note : Only one WAN can support IPv6.

WAN >> Internet Access

Internet Access

| Index | Display Name | Physical Mode | Access Mode | Details Page | IPv6 |
|-------|--------------|---------------|------------------------|--------------|------|
| WAN1 | | Ethernet | Static or Dynamic IP ▾ | Details Page | IPv6 |
| WAN2 | | Ethernet | None ▾ | Details Page | IPv6 |
| WAN3 | | USB | None ▾ | Details Page | IPv6 |

Note : Only one WAN can support IPv6.

Each item is explained as follows:

| Item | Description |
|----------------------|--|
| Index | Display the WAN interface. |
| Display Name | It shows the name of the WAN1/WAN2/WAN3 that entered in general setup. |
| Physical Mode | It shows the physical connection for WAN1(Ethernet)/WAN2 (Ethernet) /WAN3 (3G USB Modem) according to the real network connection. |
| Access Mode | Use the drop down list to choose a proper access mode. The details page of that mode will be popped up. If not, click Details Page for accessing the page to configure the settings. |
| Details Page | This button will open different web page according to the access mode that you choose in WAN interface. |
| IPv6 | This button will open different web page (based on Physical Mode) to setup IPv6 Internet Access Mode for WAN interface. If IPv6 service is active on this WAN interface, the color of “IPv6” will become green. |

Details Page for PPPoE in WAN1/WAN2

To choose PPPoE as the accessing protocol of the internet, please select **PPPoE** from the **Internet Access** menu. The following web page will be shown.

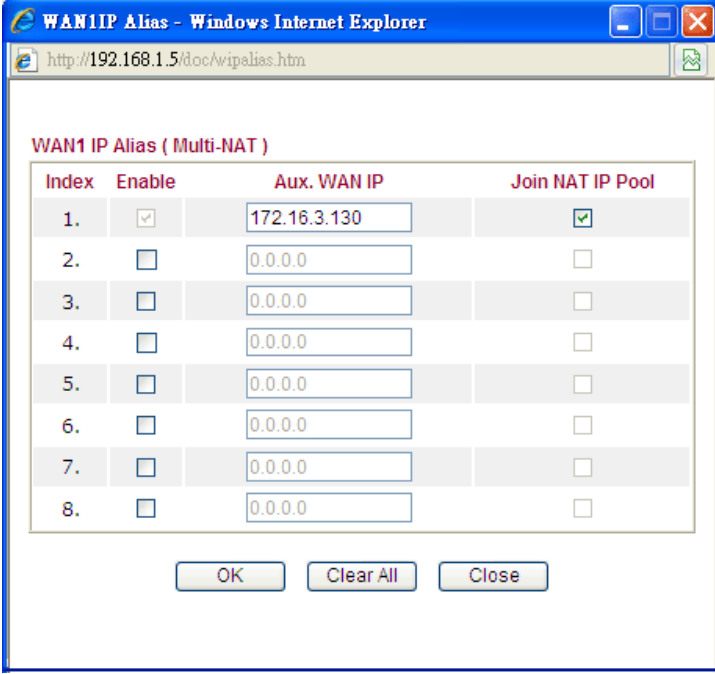

WAN >> Internet Access

WAN 1

| | |
|---|--|
| <p>PPPoE Client Mode <input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <hr/> <p>ISP Access Setup Username <input type="text"/> Password <input type="text"/> Index(1-15) in Schedule Setup: => <input type="text"/>, <input type="text"/>, <input type="text"/>, <input type="text"/></p> <hr/> <p>WAN Connection Detection Mode <input type="text" value="ARP Detect"/> Ping IP <input type="text"/> TTL: <input type="text"/></p> <hr/> <p>MTU <input type="text" value="1442"/> (Max:1492)</p> <hr/> <p>PPPoE Pass-through <input type="checkbox"/> For Wired LAN <input type="checkbox"/> For Wireless LAN</p> | <p>PPP/MP Setup PPP Authentication <input type="text" value="PAP or CHAP"/> Idle Timeout <input type="text" value="180"/> second(s)</p> <p>IP Address Assignment Method (ICP) <input type="text" value="WAN IP Alias"/></p> <p>Fixed IP: <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP) Fixed IP Address <input type="text"/></p> <hr/> <p><input checked="" type="radio"/> Default MAC Address <input type="radio"/> Specify a MAC Address MAC Address: <input type="text" value="00"/> <input type="text" value=".50"/> <input type="text" value=".7F"/> <input type="text" value=":00"/> <input type="text" value=".00"/> <input type="text" value=".01"/></p> |
|---|--|

Available settings are explained as follows:

| Item | Description |
|--|---|
| PPPoE Client Mode | Click Enable for activating this function. If you click Disable , this function will be closed and all the settings that you adjusted in this page will be invalid. |
| ISP Access Setup | Enter your allocated username, password and authentication parameters according to the information provided by your ISP. Username – Type in the username provided by ISP in this field. Password – Type in the password provided by ISP in this field. Index (1-15) in Schedule Setup - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application – Schedule web page and you can use the number that you have set in that web page. |
| WAN Connection Detection | Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect. Mode – Choose ARP Detect or Ping Detect for the system to execute for WAN detection. Ping IP – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging. TTL (Time to Live) – Displays value for your reference. TTL value is set by telnet command. |
| MTU | It means Max Transmit Unit for packet. The default setting is 1442. |
| PPPoE Pass-through | The router offers PPPoE dial-up connection. Besides, you also can establish the PPPoE connection directly from local clients to your ISP via the Vigor router. When PPPoA protocol is selected, the PPPoE package transmitted by PC will be transformed into PPPoA package and sent to WAN server. Thus, the PC can access Internet through such direction. For Wired LAN – If you check this box, PCs on the same network can use another set of PPPoE session (different with the Host PC) to access into Internet. For Wireless LAN – If you check this box, PCs on the same wireless network can use another set of PPPoE session (different with the Host PC) to access into Internet. |
| PPP/MP Setup | PPP Authentication – Select PAP only or PAP or CHAP for PPP. If you want to connect to Internet all the time, you can check Always On . Idle Timeout – Set the timeout for breaking down the Internet after passing through the time without any action. |
| IP Address Assignment Method (IPCP) | Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function. |

| Item | Description |
|------|--|
| | <p>WAN IP Alias - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using.</p>  <p>Fixed IP – Click Yes to use this function and type in a fixed IP address in the box of Fixed IP Address.</p> <p>Default MAC Address – You can use Default MAC Address or specify another MAC address by typing on the boxes of MAC Address for the router.</p> <p>Specify a MAC Address – Type the MAC address for the router manually.</p> |

After finishing all the settings here, please click **OK** to activate them.

Details Page for Static or Dynamic IP in WAN1/WAN2

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your ISP service providers. In most cases, a Cable service provider will offer a fixed public IP. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use **Static or Dynamic IP** as the accessing protocol of the internet, please choose **Static or Dynamic IP** mode from **Internet Access** menu. The following web page will be shown.

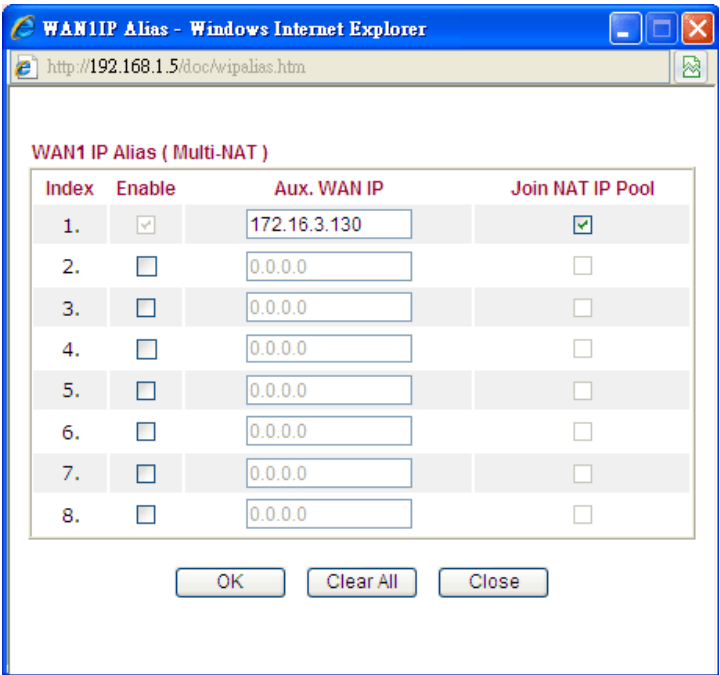

WAN >> Internet Access

WAN 1

|--|--|

Available settings are explained as follows:

| Item | Description |
|-----------------------------|--|
| Static or Dynamic IP | Click Enable for activating this function. If you click Disable , this function will be closed and all the settings that you adjusted in this page will be invalid. |
| Keep WAN Connection | Normally, this function is designed for Dynamic IP environments because some ISPs will drop connections if there is no traffic within certain periods of time. Check Enable PING to keep alive box to activate this function. PING to the IP - If you enable the PING function, please specify the IP address for the system to PING it for keeping alive. PING Interval - Enter the interval for the system to execute the PING operation. |
| WAN Connection | Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect. |

| Item | Description |
|--------------------------------|--|
| Detection | <p>Mode – Choose ARP Detect or Ping Detect for the system to execute for WAN detection.</p> <p>Ping IP – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging.</p> <p>TTL (Time to Live) – Displays value for your reference. TTL value is set by telnet command.</p> |
| MTU | It means Max Transmit Unit for packet. The default setting is 1442. |
| RIP Protocol | Routing Information Protocol is abbreviated as RIP(RFC1058) specifying how routers exchange routing tables information. Click Enable RIP for activating this function. |
| Bridge Mode | If you check this box to invoke the function, the router will work as a bridge. |
| WAN IP Network Settings | <p>This group allows you to obtain an IP address automatically and allows you type in IP address manually.</p> <p>WAN IP Alias - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using.</p>  <p>Obtain an IP address automatically – Click this button to obtain the IP address automatically if you want to use Dynamic IP mode.</p> <p>Router Name: Type in the router name provided by ISP.</p> <p>Domain Name: Type in the domain name that you have assigned.</p> <p>Specify an IP address – Click this radio button to specify some data if you want to use Static IP mode.</p> |

| Item | Description |
|------|---|
| | <p>IP Address: Type the IP address.</p> <p>Subnet Mask: Type the subnet mask.</p> <p>Gateway IP Address: Type the gateway IP address.</p> <p>Default MAC Address: Click this radio button to use default MAC address for the router.</p> <p>Specify a MAC Address: Some Cable service providers specify a specific MAC address for access authentication. In such cases you need to click the Specify a MAC Address and enter the MAC address in the MAC Address field.</p> <p>DNS Server IP Address - Type in the primary IP address for the router if you want to use Static IP mode. If necessary, type in secondary IP address for necessity in the future.</p> |

After finishing all the settings here, please click **OK** to activate them.

Details Page for PPTP/L2TP in WAN1/WAN2

Details Page for IPv6 – PPP in WAN1/WAN2

During the procedure of IPv4 PPPoE connection, we can get the IPv6 Link Local Address between the gateway and Vigor router through IPv6CP. Later, use DHCPv6 or Accept RA to acquire the IPv6 prefix address (such as: 2001:B010:7300:200::/64) offered by the ISP. In addition, PCs under LAN also can have the public IPv6 address for Internet access by means of the generated prefix.

No need to type any other information for PPP mode.

WAN >> Internet Access

WAN 1 IPv6

| | |
|--|--------------------------------------|
| Internet Access Mode | |
| Connection Type | PPP <input type="button" value="v"/> |
| Note : IPv4 WAN setting should be PPPoE client. | |

Below shows an example for successful IPv6 connection based on PPPoE mode.

Online Status

| Physical Connection | | System Uptime: 0:0:30 | |
|--|-------------------|------------------------|-----------------|
| IPv4 | IPv6 | | |
| LAN Status | | | |
| IP Address | | | |
| 2001:B010:7300:200:21D:AAFF:FE7A:3E58/64 (Global) | | | |
| FE80::21D:AAFF:FE7A:3E58/64 (Link) | | | |
| TX Packets | RX Packets | TX Bytes | RX Bytes |
| 7 | 8 | 618 | 672 |
| WAN2 IPv6 Status | | | |
| Enable | Mode | Up Time | |
| Yes | PPP | 0:00:11 | |
| IP | | | |
| 2001:B010:7300:200:21D:AAFF:FE7A:3E5A/128 (Global) | | Gateway IP | |
| FE80::1D:AAFF:FE7A:3E5A/128 (Link) | | FE80::90:1A00:242:AD52 | |
| DNS IP | | | |
| 2001:B000:168::1 | | | |
| 2001:B000:168::2 | | | |
| TX Packets | RX Packets | TX Bytes | RX Bytes |
| 7 | 4 | 544 | 616 |

Note: At present, the **IPv6 prefix** can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

Details Page for IPv6 – TSPC in WAN1/WAN2/WAN3

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (<http://gogonet.gogo6.com/page/freenet6-account>) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

WAN >> Internet Access

Available settings are explained as follows:

| Item | Description |
|--|---|
| Static IPv6 Address configuration | IPv6 Address – Type the IPv6 Static IP Address. Prefix Length – Type the fixed value for prefix length. Add – Click it to add a new entry. Delete – Click it to remove an existed entry. |
| Current IPv6 Address Table | Display current interface IPv6 address. |
| Static IPv6 Gateway Configuration | IPv6 Gateway Address - Type your IPv6 gateway address here. |

4.1.4 Load-Balance Policy

This router supports the function of load balancing. It can assign traffic with protocol type, IP address for specific host, a subnet of hosts, and port range to be allocated in WAN interface. The user can assign traffic category and force it to go to dedicate network interface based on the following web page setup. Twenty policies of load-balance are supported by this router.

Note: Load-Balance Policy is running only when more than one WAN interface is activated.

WAN >> Load-Balance Policy

Load-Balance Policy

| Index | Enable | Protocol | WAN | Src IP Start | Src IP End | Dest IP Start | Dest IP End | Dest Port Start | Dest Port End | Move Up | Move Down |

After finishing all the settings here, please click **OK** to save the configuration.

4.1.5 Multi-VLAN

This router allows you to create multi-VLAN for different purposes of data transferring. Simply go to **WAN** and select **Multi-VLAN**.

General

The system allows you to set up to eight channels for multi-VLAN.

WAN >> Multi-VLAN

| General | | Bridge | | |
|---------|--------------------------|------------|--------------------------------|--------------------------------|
| Channel | Enable | | Add Tag | Priority |
| 1. | <input type="checkbox"/> | | <input type="text" value="0"/> | <input type="text" value="0"/> |
| 2. | <input type="checkbox"/> | | <input type="text" value="0"/> | <input type="text" value="0"/> |
| 3. | <input type="checkbox"/> | | <input type="text" value="0"/> | <input type="text" value="0"/> |
| 4. | <input type="checkbox"/> | | <input type="text" value="0"/> | <input type="text" value="0"/> |
| 5. | <input type="checkbox"/> | WAN | <input type="text" value="0"/> | <input type="text" value="0"/> |
| 6. | <input type="checkbox"/> | WAN | <input type="text" value="0"/> | <input type="text" value="0"/> |
| 7. | <input type="checkbox"/> | WAN | <input type="text" value="0"/> | <input type="text" value="0"/> |
| 8. | <input type="checkbox"/> | | <input type="text" value="0"/> | <input type="text" value="0"/> |

- Note:**
1. Tag value must be set between 1 ~ 4095 and unique for each channel.
 2. Only one channel can be untagged (equal to 0) at a time.
 3. Channel 1 and channel 2 are reserved for NAT/Route application.
 4. Channel 5 to channel 8 can be used for Router-borne application.

Available settings are explained as follows:

| Item | Description |
|----------------|---|
| Channel | Display the number of each channel. |
| Enable | Check this box to enable that channel. The channels that you enabled here will be shown in the Multi-VLAN channel drop |

| Item | Description |
|-----------------|---|
| | down list on the web page of Internet Access . Though you can enable eight channels in this page, yet only one channel can be chosen on the web page of Internet Access . |
| Add Tag | To identify the usage of VLAN, check this box to invoke this setting. And type the number for VLAN ID (number). |
| Priority | To add the packet priority number for such VLAN. The range is from 0 to 7. |

After finishing all the settings here, please click **OK** to save the configuration.

WAN link for Channel 5, 6 and 7

They are provided for router-borne application such as **TR-069**. The settings must be applied and obtained from your ISP. For your special request, please contact with your ISP and then click WAN link of Channel 5, 6 or 7 to configure your router.

WAN >> Multi-VLAN >> PVC Channel 5

Note: P1 is reserved for Nat/Route use.

Available settings are explained as follows:

| Item | Description |
|-----------------|--|
| Enable | Check this box to enable that channel. Only channel 3 to 8 can be set in this page, for channel 1 to 2 are reserved for NAT using. |
| P1 to P4 | It means the LAN port 1 to 4. Check the box to designate the LAN port for channel 3 to 8. |

Click **Clear** to remove all the configurations in this page if you do not satisfy it. When you finish the configuration, please click **OK** to save and exit this page.

4.2 LAN

Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

4.2.1 Basics of LAN

The most generic function of Vigor router is NAT. It creates a private subnet of your own. As mentioned previously, the router will talk to other public hosts on the Internet by using public IP address and talking to local hosts by using its private IP address. What NAT does is to translate the packets from public IP address to private IP address to forward the right packets to the right host and vice versa. Besides, Vigor router has a built-in DHCP server that assigns private IP address to each local host. See the following diagram for a briefly understanding.

In some special case, you may have a public IP subnet from your ISP such as 220.135.240.0/24. This means that you can set up a public subnet or call second subnet that each host is equipped with a public IP address. As a part of the public subnet, the Vigor router will serve for IP routing to help hosts in the public subnet to communicate with other public hosts or servers outside. Therefore, the router should be set as the gateway for public hosts.

What is Routing Information Protocol (RIP)

Vigor router will exchange routing information with neighboring routers using the RIP to accomplish IP routing. This allows users to change the information of the router such as IP address and the routers will automatically inform for each other.

What is Static Route

When you have several subnets in your LAN, sometimes a more effective and quicker way for connection is the **Static routes** function rather than other method. You may simply set rules to forward data from one specified subnet to another specified subnet without the presence of RIP.

What are Virtual LANs and Rate Control

You can group local hosts by physical ports and create up to 4 virtual LANs. To manage the communication between different groups, please set up rules in Virtual LAN (VLAN) function and the rate of each.

4.2.2 General Setup

This page provides you the general settings for LAN. Click **LAN** to open the LAN settings page and choose **General Setup**.

There are four subnets provided by the router which allow users to divide groups into different subnets (LAN1 – LAN4). In addition, different subnets can link for each other by configuring **Inter-LAN Routing**. At present, LAN1 setting is fixed with NAT mode only. LAN2 – LAN4 can be operated under **NAT** or **Route** mode. IP Routed Subnet can be operated under Route mode.

After finishing all the settings here, please click **OK** to save the configuration.

Details Page for LAN1 – IPv6 Setup

There are two configuration pages for LAN1, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information. Below shows the settings page for IPv6.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup
LAN 1 IPv6 Setup

RADVD Configuration

Enable Disable

Advertisement Lifetime Seconds (Range : 600 - 9000)

DHCPv6 Server Configuration

Enable Server Disable Server

Start IPv6 Address

End IPv6 Address

DNS Server IPv6 Address

Primary DNS Server

Secondary DNS Server

Static IPv6 Address configuration

IPv6 Address / Prefix Length

Current IPv6 Address Table

| Index | IPv6 Address/Prefix Length | Scope |
|-------|-----------------------------|-------|
| 1 | FE80::250:7FFF:FEEA:7EC8/64 | Link |

It provides 2 daemons for LAN side IPv6 address configuration. One is **RADVD**(stateless) and the other is **DHCPv6 Server** (Stateful).

Available settings are explained as follows:

| Item | Description |
|----------------------------|---|
| RADVD Configuration | <p>Enable – Click it to enable RADVD server. The router advertisement daemon (radvd) sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.</p> <p>Disable – Click it to disable RADVD server.</p> <p>Advertisement Lifetime - The lifetime associated with the default router in units of seconds. It's used to control the lifetime of the prefix. The maximum value corresponds to 18.2 hours. A lifetime of 0 indicates that the router is not a default router and should not appear on the default router</p> |

| | |
|--|---|
| | list. |
| DHCPv6 Server Configuration | <p>Enable Server –Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration.</p> <p>Disable Server –Click it to disable DHCPv6 server.</p> <p>Start IPv6 Address / End IPv6 Address –Type the start and end address for IPv6 server.</p> |
| DNS Server IPv6 Address | <p>Primary DNS Sever – Type the IPv6 address for Primary DNS server.</p> <p>Secondary DNS Server –Type another IPv6 address for DNS server if required.</p> |
| Static IPv6 Address configuration | <p>IPv6 Address –Type static IPv6 address for LAN.</p> <p>Prefix Length – Type the fixed value for prefix length.</p> <p>Add – Click it to add a new entry.</p> <p>Delete – Click it to remove an existed entry.</p> |
| Current IPv6 Address Table | Display current used IPv6 addresses. |

Details Page for LAN2/LAN3/LAN4

Details Page for LAN2 to LAN4 will be available only when VLAN settings for LAN2 to LAN4 are configured and activated.

Status: v --- Active, x --- Inactive, ? --- Empty

Each item is explained as follows:

| Item | Description |
|-----------------------------------|---|
| Index | The number (1 to 40) under Index allows you to open next page to set up static route. |
| Destination Address | Displays the destination address of the static route. |
| Status | Displays the status of the static route. |
| Set to Factory Default | Clear all of the settings and return to factory default settings. |
| Viewing IPv6 Routing Table | Displays the routing table for your reference. |

Click any underline of index number to get the following page.

[LAN >> Static Route Setup](#)

Index No. 1

Enable

Destination IPv6 Address / Prefix Len: /

Gateway IPv6 Address:

Network Interface:

Available settings are explained as follows:

| Item | Description |
|---------------|----------------------------------|
| Enable | Click it to enable this profile. |

| | |
|--|--|
| Destination IPv6 Address / Prefix Len | Type the IP address with the prefix length for this entry. |
| Gateway IPv6 Address | Type the gateway address for this entry. |
| Network Interface | Use the drop down list to specify an interface for this static route.  |

After finishing all the settings here, please click **OK** to save the configuration.

Add Static Routes to Private and Public Networks (based on IPv4)

Here is an example of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

1. Go to **LAN** page and click **General Setup**, select 1st Subnet as the **RIP Protocol Control**. Then click the **OK** button.

Note: There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those

hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

- Click the **LAN - Static Route** and click on the **Index Number 1**. Check the **Enable** box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click **OK**.

LAN >> Static Route Setup

Index No. 1

Enable

Destination IP Address: 192.168.10.0

Subnet Mask: 255.255.255.0

Gateway IP Address: 192.168.1.2

Network Interface: LAN1

OK Cancel Delete

- Return to **Static Route Setup** page. Click on another **Index Number** to add another static route as show below, which regulates all packets destined to 211.100.88.0 will be forwarded to 192.168.1.3.

LAN >> Static Route Setup

Index No. 2

Enable

Destination IP Address: 211.100.88.0

Subnet Mask: 255.255.255.0

Gateway IP Address: 192.168.1.3

Network Interface: LAN1

OK Cancel Delete

- Go to **Diagnostics** and choose **Routing Table** to verify current routing table.

Diagnostics >> View Routing Table

| Current Running Routing Table | IPv6 Routing Table | Refresh |
|---|-------------------------|---------|
| Key: C - connected, S - static, R - RIP, * - default, ~ - private | | |
| * 0.0.0.0/ 0.0.0.0 | via 172.16.1.1 WAN2 | |
| S~ 192.168.10.0/ 255.255.255.0 | via 192.168.1.2 LAN1 | |
| C~ 192.168.1.0/ 255.255.255.0 | directly connected LAN1 | |
| C 172.16.0.0/ 255.255.0.0 | directly connected WAN2 | |
| S~ 211.100.88.0/ 255.255.255.0 | via 192.168.1.3 LAN1 | |

Note: WAN5, WAN6, WAN7 are router-borne WANs.

4.2.4 VLAN

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. You can also manage the in/out rate of each port. Go to **LAN** page and select **VLAN**. The following page will appear. Click **Enable** to invoke VLAN function.

LAN >> VLAN Configuration

VLAN Configuration

Enable

| | LAN | | | | Wireless LAN | | | | VLAN Tag | | | |
|-------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|----------|--------------------------|--------------------------------|----------|

1. Tag based VLAN only applied for LAN Ports;
2. The checked Wireless LAN SSID will not has VLAN tagging function but regarded as joining VLAN group;
3. The set VLAN ID (VID) must be unique and not duplicate.

Available settings are explained as follows:

| Item | Description |
|---------------------|--|
| LAN | P1 – P4 – Check the LAN port(s) to be grouped under the selected VLAN. |
| Wireless LAN | SSID1 – SSID4 – Check the SSID box (es) for the wireless clients to be grouped under the selected VLAN. |
| Subnet | Choose one of them to make the selected VLAN mapping to the specified subnet only. For example, LAN1 is specified for VLAN0. It means that PCs grouped under VLAN0 can get the IP address (es) that specified by the subnet. |
| VLAN Tag | <p>Enable – Enable the function of VLAN with tag. The router will add specific VLAN number to all packets on the LAN while sending them out. Please type the tag value and specify the priority for the packets sending by LAN.</p> <p>Disable – Disable the function of VLAN with tag.</p> <p>VID – Type the value as the VLAN ID number. The range is form 0 to 4095.</p> <p>Priority – Type the packet priority number for such VLAN. The range is from 0 to 7.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

Note: Settings in this page only applied to LAN port but not WAN port.

4.2.5 Bind IP to MAC

This function is used to bind the IP and MAC address in LAN to have a strengthening control in network. When this function is enabled, all the assigned IP and MAC address binding together cannot be changed. If you modified the binding IP or MAC address, it might cause you not access into the Internet.

Click **LAN** and click **Bind IP to MAC** to open the setup page.

LAN >> Bind IP to MAC

Bind IP to MAC

Enable Disable Strict Bind

ARP Table | [Select All](#) | [Sort](#) | [Refresh](#) | **IP Bind List** | [Select All](#) | [Sort](#) |

| IP Address | Mac Address |
|--------------|-------------------|
| 192.168.1.10 | E0-CB-4E-DA-48-79 |
| 192.168.1.12 | D8-B3-77-12-AF-9A |

| Index | IP Address | Mac Address |
|-------|------------|-------------|
|-------|------------|-------------|

Add and Edit

IP Address:

Mac Address: : : : :

Comment:

Show Comment

Note: IP-MAC binding presets DHCP Allocations.
If you select Strict Bind, unspecified LAN clients cannot access the Internet.

Available settings are explained as follows:

| Item | Description |
|--------------------|---|
| Enable | Click this radio button to invoke this function. However, IP/MAC which is not listed in IP Bind List also can connect to Internet. |
| Disable | Click this radio button to disable this function. All the settings on this page will be invalid. |
| Strict Bind | Click this radio button to block the connection of the IP/MAC which is not listed in IP Bind List. |
| ARP Table | This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking Add below. |

| | |
|---------------------|---|
| Select All | Click this link to select all the items in the ARP table. |
| Sort | Reorder the table based on the IP address. |
| Refresh | Refresh the ARP table listed below to obtain the newest ARP table information. |
| Add and Edit | <p>IP Address – Type the IP address that will be used for the specified MAC address.</p> <p>Mac Address – Type the MAC address that is used to bind with the assigned IP address.</p> <p>Comment – Type a brief description for such list.</p> |
| IP Bind List | It displays a list for the IP bind to MAC information. |
| Add | It allows you to add the one you choose from the ARP table or the IP/MAC address typed in Add and Edit to the table of IP Bind List . |
| Edit | It allows you to edit and modify the selected IP address and MAC address that you create before. |
| Delete | You can remove any item listed in IP Bind List . Simply click and select the one, and click Delete . The selected item will be removed from the IP Bind List . |

After finishing all the settings here, please click **OK** to save the configuration.

Note: Before you select **Strict Bind**, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web user interface of the router might not be accessed.

4.2.6 LAN Port Mirror

LAN port mirror can be applied for the users in LAN. Generally speaking, this function copies traffic from one or more specific ports to a target port. This mechanism helps manager track the network errors or abnormal packets transmission without interrupting the flow of data access the network. By the way, user can apply this function to monitor all traffics which user needs to check.

There are some advantages supported in this feature. First, it is more economical without other detecting equipments to be set up. Second, it may be able to view traffic on one or more ports within a VLAN at the same time. Third, it can transfer all data traffics to be mirrored to one analyzer connect to the mirroring port. Last, it is more convenient and easy to configure in user's interface.

LAN >> LAN Port Mirror

LAN Port Mirror

Port Mirror:
 Enable Disable

Mirror port:
 P2 P3 P4

Mirrored port:
 P1 P2 P3 P4

Note :The selected mirror port will only serve debug purposes and should not be used as a part of the LAN.

OK

Available settings are explained as follows:

| Item | Description |
|----------------------|---|
| Port Mirror | Check Enable to activate this function. Or, check Disable to close this function. |
| Mirror Port | Select a port to view traffic sent from mirrored ports. |
| Mirrored port | Select which ports are necessary to be mirrored. |

After finishing all the settings here, please click **OK** to save the configuration.

4.2.7 Wired 802.1x

IEEE 802.1x is an IEEE Standard for port-based Network Access Control (PNAC). It is part of the IEEE 802.1 group of networking protocols. It provides an authentication mechanism for the device that is attached to a LAN or WLAN.

Wired 802.1x provides authentication for one network device on each LAN port. The RADIUS Server settings must be configured before enabling 802.1x because the EAP (Extensible Authentication Protocol) Authenticator relies on the RADIUS Server in its authentication process. Each LAN port with Wired 802.1x configured will only forward 802.1x packets and block all other packets until the authentication has successfully completed.

LAN >> Wired 802.1x

Wired 802.1x

LAN 802.1x:

Enable

802.1x ports:

P1 P2 P3 P4

Please note that 802.1x enabled LAN ports will support EAPOL authentication for one network device only. Therefore, 802.1x enabled LAN ports will have issues when connecting to a L2 switch. If you want 802.1x support for multiple network devices, please disable 802.1x here and configure 802.1x on the connecting switch. This feature supports PEAP and EAP-TLS.

OK

Available settings are explained as follows:

| Item | Description |
|---------------------|---|
| Enable | Check the box to enable LAN 802.1x function. |
| 802.1x ports | After enabling the function, simply specify the LAN port(s) to apply such function. |

After finishing all the settings here, please click **OK** to save the configuration.

4.2.8 Web Portal Setup

This page allows you to configure a profile with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router. No matter what the purpose of the wireless/LAN client is, he/she will be forced into the URL configured here while trying to access into the Internet or the desired web page through this router. That is, a company which wants to have an advertisement for its products to users can specify the URL in this page to reach its goal.

LAN >> Web Portal Setup

Web Portal Table:

| Profile | Status | Interface | |
|--------------------|---------|-----------|--|
| 1. | Disable | None | <input type="button" value="Preview"/> |
| 2. | Disable | None | <input type="button" value="Preview"/> |
| 3. | Disable | None | <input type="button" value="Preview"/> |
| 4. | Disable | None | <input type="button" value="Preview"/> |

Each item is explained as follows:

| Item | Description |
|------------------|--|
| Profile | Display the number link which allows you to configure the profile. |
| Status | Display the content (Disable, URL Redirect or Message) of the profile. |
| Interface | Display the applied interfaced of the profile. |
| Preview | Open a preview window according to the configured settings. |

To configure the profile, click any index number link to open the following page.

LAN >> Web Portal Setup

Profile Index: 1

Disable
 URL Redirect
 Message

http://

e.g. http://www.draytek.com

Note : If the User Management application is enabled, it will override the Web Portal settings seen here.

```

        <h1><font color="red">Vigor</font></h1><h2> -
        Reliable connectivity</h2><h2> - Robust firewall
        protection</h2><h2> - Multi-site secure
        communication</h2>
      
```

(Max 255 characters)

Applied Interfaces

LAN1 LAN2 LAN3 LAN4
 SSID1 SSID2 SSID3 SSID4

Available settings are explained as follows:

| Item | Description |
|---------------------------|--|
| Disable | Click this button to close this function. |
| URL Redirect | Any user who wants to access into Internet through this router will be redirected to the URL specified here first. It is a useful method for the purpose of advertisement. For example, force the wireless user(s) in hotel to access into the web page that the hotel wants the user(s) to visit. |
| Message | Type words or sentences here. The message will be displayed on the screen for several seconds when the wireless users access into the web page through the router. |
| Applied Interfaces | Check the box (es) representing different interfaces to be applied by such profile. The advantage is that each LAN (1/2/3/4) interface and/or each SSID (1/2/3/4) for wireless network can be applied with different web portal separately. |

After finishing all the settings here, please click **OK** to save the configuration.

4.3 NAT

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- **Save cost on applying public IP address and apply efficient usage of IP address.** NAT allows the internal IP addresses of local hosts to be translated into one public IP address, thus you can have only one IP address on behalf of the entire internal hosts.
- **Enhance security of the internal network by obscuring the IP address.** There are many attacks aiming victims based on the IP address. Since the attacker cannot be aware of any private IP addresses, the NAT function can protect the internal network.

On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

Below shows the menu items for NAT.

- LAN
- NAT
 - ▶ Port Redirection
 - ▶ DMZ Host
 - ▶ Open Ports
 - ▶ Address Mapping
 - ▶ Port Triggering
- Firewall

4.3.1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with public IP address from external users to the mapping private IP address/port of the server.

The port redirection can only apply to incoming traffic.

To use this function, please go to **NAT** page and choose **Port Redirection** web page. The **Port Redirection Table** provides 20 port-mapping entries for the internal hosts.

Port Redirection | [Set to Factory Default](#) |

| Index | Service Name | WAN Interface | Protocol | Public Port | Private IP | Status |
|---------------------|--------------|---------------|----------|-------------|------------|--------|
| 1. | | All | | | | x |
| 2. | | All | | | | x |
| 3. | | All | | | | x |
| 4. | | All | | | | x |
| 5. | | All | | | | x |
| 6. | | All | | | | x |
| 7. | | All | | | | x |
| 8. | | All | | | | x |
| 9. | | All | | | | x |
| 10. | | All | | | | x |

<< [1-10](#) | [11-20](#) >> [Next](#) >>

Each item is explained as follows:

| Item | Description |
|----------------------|--|
| Index | Display the number of the profile. |
| Service Name | Display the description of the specific network service. |
| WAN Interface | Display the WAN IP address used by the profile. |
| Protocol | Display the transport layer protocol (TCP or UDP). |
| Public Port | Display the port number which will be redirected to the specified Private IP and Port of the internal host. |
| Private IP | Display the IP address of the internal host providing the service. |
| Status | Display if the profile is enabled (v) or not (x). |

Press any number under Index to access into next page for configuring port redirection.

Index No. 1

Enable

Mode: Range Single Range

Service Name:

Protocol: ---

WAN IP: 1.All

Public Port: -

Private IP: -

Private Port:

Note: In "Range" Mode the End IP will be calculated automatically once the Public Port and Start IP have been entered.

Available settings are explained as follows:

| Item | Description |
|---------------------|---|
| Enable | Check this box to enable such port redirection setting. |
| Mode | Two options (Single and Range) are provided here for you to choose. To set a range for the specific service, select Range . In Range mode, if the public port (start port and end port) and the starting IP of private IP had been entered, the system will calculate and display the ending IP of private IP automatically. |
| Service Name | Enter the description of the specific network service. |
| Protocol | Select the transport layer protocol (TCP or UDP). |
| WAN IP | Select the WAN IP used for port redirection. There are eight WAN IP alias that can be selected and used for port redirection. The default setting is All which means all the incoming data from any port will be redirected to specified range of IP address and port. |
| Public Port | Specify which port can be redirected to the specified Private IP and Port of the internal host. If you choose Range as the port redirection mode, you will see two boxes on this field. Simply type the required number on the first box. The second one will be assigned automatically later. |
| Private IP | Specify the private IP address of the internal host providing the service. If you choose Range as the port redirection mode, you will see two boxes on this field. Type a complete IP address in the first box (as the starting point) and the fourth digits in the second box (as the end point). |
| Private Port | Specify the private port number of the service offered by the internal host. |

After finishing all the settings here, please click **OK** to save the configuration.

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

For example, the built-in web user interface in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to **change the router's http port to any one other than the default port 80** to avoid conflict, such as 8080. This can be set in the **System Maintenance >>Management Setup**. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

OK

4.3.2 DMZ Host

As mentioned above, **Port Redirection** can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility **DMZ Host** that maps ALL unsolicited data on any protocol to a single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. **DMZ Host** allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

Click **DMZ Host** to open the following page:

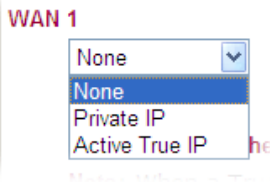

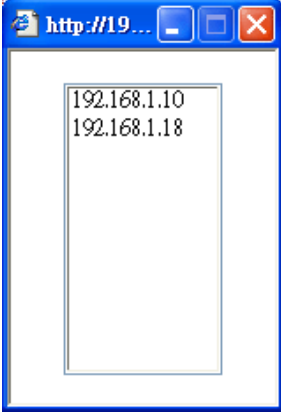

NAT >> DMZ Host Setup

DMZ Host Setup

| WAN1 | WAN2 | WAN3 |
|---|------|------|
| <p>WAN 1</p> <p>None <input type="button" value="v"/></p> <p>Private IP <input type="text"/> <input type="button" value="Choose PC"/></p> <p>MAC Address of the True IP DMZ Host <input type="text" value="00"/> <input type="text" value="00"/> <input type="text" value="00"/> <input type="text" value="00"/> <input type="text" value="00"/> <input type="text" value="00"/></p> <p>Note: When a True-IP DMZ host is turned on, it will force the router's WAN connection to be always on.</p> <p style="text-align: center;"><input type="button" value="OK"/></p> | | |

Available settings are explained as follows:

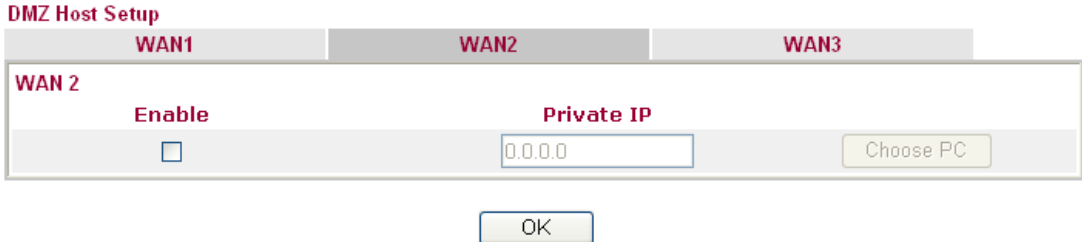

| Item | Description |
|--|--|
| <p>WAN 1</p> <p>None <input type="button" value="v"/></p> | <p>Choose Private IP or Active True IP first.</p> <p>Active True IP selection is available for WAN1 only.</p> |

| | |
|-------------------|--|
| |  |
| Private IP | Enter the private IP address of the DMZ host, or click Choose PC to select one. |
| Choose PC | <p>Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.</p>  <p>When you have selected one private IP from the above dialog, the IP address will be shown on the screen. Click OK to save the setting.</p> |

DMZ Host for WAN2 and WAN3 is slightly different with WAN1. **Active True IP** selection is available for WAN1 only. See the following figure.

See the following figure.

NAT >> DMZ Host Setup

If you previously have set up **WAN Alias** for **PPPoE** or **Static** or **Dynamic IP** mode in WAN2 interface, you will find them in **Aux. WAN IP** for your selection.

DMZ Host Setup

| WAN1 | | WAN2 | | WAN3 | |
|--------------|--------------------------|--------------|--------------------------------------|--|--|
| WAN 2 | | | | | |
| Index | Enable | Aux. WAN IP | Private IP | | |
| 1. | <input type="checkbox"/> | 172.16.3.102 | <input type="text" value="0.0.0.0"/> | <input type="button" value="Choose PC"/> | |
| 2. | <input type="checkbox"/> | 172.16.3.200 | <input type="text" value="0.0.0.0"/> | <input type="button" value="Choose PC"/> | |

Available settings are explained as follows:

| Item | Description |
|--|--|
| Enable | Check to enable the DMZ Host function. |
| Private IP | Enter the private IP address of the DMZ host, or click Choose PC to select one. |
| Choose PC | <p>Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.</p>  <p>When you have selected one private IP from the above dialog, the IP address will be shown on the following screen. Click OK to save the setting.</p> |
|  | |

After finishing all the settings here, please click **OK** to save the configuration.

4.3.3 Open Ports

Open Ports allows you to open a range of ports for the traffic of special applications.

Common application of Open Ports includes P2P application (e.g., BT, KaZaA, Gnutella, WinMX, eMule and others), Internet Camera etc. Ensure that you keep the application involved up-to-date to avoid falling victim to any security exploits.

Click **Open Ports** to open the following page:

[NAT >> Open Ports](#)

| Open Ports Setup | | | | Set to Factory Default |
|---------------------|---------|---------------|------------------|--|
| Index | Comment | WAN Interface | Local IP Address | Status |
| 1. | | | | X |
| 2. | | | | X |
| 3. | | | | X |
| 4. | | | | X |
| 5. | | | | X |
| 6. | | | | X |
| 7. | | | | X |
| 8. | | | | X |
| 9. | | | | X |
| 10. | | | | X |

<< [1-10](#) | [11-20](#) >> [Next](#) >>

Each item is explained as follows:

| Item | Description |
|-------------------------|---|
| Index | Indicate the relative number for the particular entry that you want to offer service in a local host. You should click the appropriate index number to edit or clear the corresponding entry. |
| Comment | Specify the name for the defined network service. |
| WAN Interface | Display the WAN interface of the profile. |
| Local IP Address | Display the private IP address of the local host offering the service. |
| Status | Display the state for the corresponding entry. X or V is to represent the Inactive or Active state. |

To add or edit port settings, click one index number on the page. The index entry setup page will pop up. In each index entry, you can specify 20 port ranges for diverse services.

Index No. 1

| 5. | <input type="text" value="-----"/> | <input type="text" value="0"/> | <input type="text" value="0"/> | 10. | <input type="text" value="-----"/> | <input type="text" value="0"/> | <input type="text" value="0"/> |

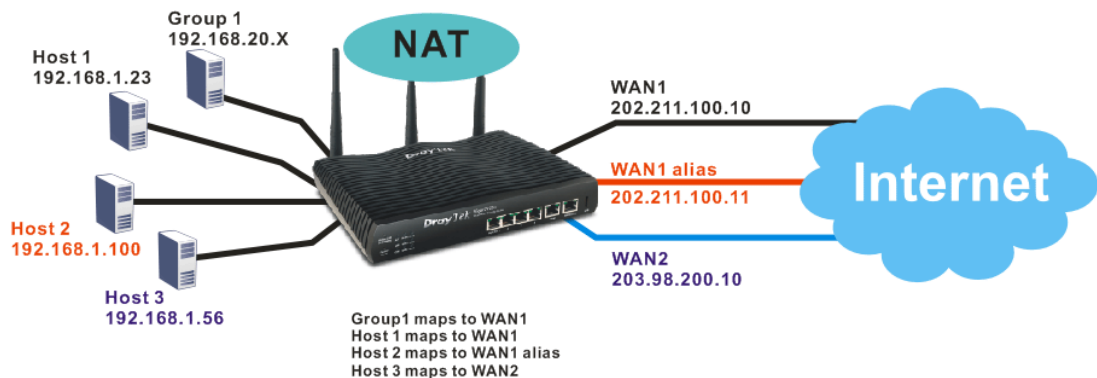

Available settings are explained as follows:

| Item | Description |
|--------------------------|--|
| Enable Open Ports | Check to enable this entry. |
| Comment | Make a name for the defined network application/service. |
| WAN Interface | Specify the WAN interface that will be used for this entry. |
| Local Computer | Enter the private IP address of the local host or click Choose PC to select one. Choose PC - Click this button and, subsequently, a window having a list of private IP addresses of local hosts will automatically pop up. Select the appropriate IP address of the local host in the list. |
| Protocol | Specify the transport layer protocol. It could be TCP , UDP , or ----- (none) for selection. |
| Start Port | Specify the starting port number of the service offered by the local host. |
| End Port | Specify the ending port number of the service offered by the local host. |

After finishing all the settings here, please click **OK** to save the configuration.

4.3.4 Address Mapping

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

Suppose the WAN settings for a router are configured as follows:

WAN1: 202.211.100.10, WAN1 alias: 202.211.100.11
WAN2: 203.98.200.10

Without address mapping feature, when a NAT host with an IP say "192.168.1.10" sends a packet to the WAN side (or the Internet), the source address of the NAT host will be mapped into either 202.211.100.10 or 203.98.200.10 (which IP or mapping is decided by the internal load balancing algorithm).

With address mapping feature, you can manually configure any host mapping to any WAN interface to fit the request. In the above example, you can configure NAT Host1 to always map to 202.211.100.10 (WAN1); Host2 to always map to 202.211.100.11 (WAN1 alias); Host3 always map to 203.98.200.10 (WAN2) and Group 1 to always map to 202.211.100.10 (WAN1).

NAT >> Address Mapping

Address Mapping Setup

| [Set to Factory Default](#) |

| Index | Protocol | Public IP | Private IP | Mask | Status |
|---------------------|----------|--------------|------------|------|--------|
| 1. | ALL | 172.16.3.130 | | /32 | x |
| 2. | ALL | 172.16.3.130 | | /32 | x |
| 3. | ALL | 172.16.3.130 | | /32 | x |
| 4. | ALL | 172.16.3.130 | | /32 | x |
| 5. | ALL | 172.16.3.130 | | /32 | x |
| 6. | ALL | 172.16.3.130 | | /32 | x |
| 7. | ALL | 172.16.3.130 | | /32 | x |
| 8. | ALL | 172.16.3.130 | | /32 | x |
| 9. | ALL | 172.16.3.130 | | /32 | x |
| 10. | ALL | 172.16.3.130 | | /32 | x |

Available settings are explained as follows:

| Item | Description |
|--------------|---|
| Index | Indicate the relative number for the particular entry that you want to configure. You should click the appropriate index number to edit or clear the corresponding entry. |

| | |
|-------------------|--|
| Protocol | Display the protocol used for this address mapping. |
| Public IP | Display the public IP address selected for this entry, e.g., 172.16.3.102. |
| Private IP | Display the private IP set for this address mapping, e.g., 192.168.1.10. |
| Mask | Display the subnet mask selected for this address mapping. |
| Status | Display the status for the entry, enable or disable. |

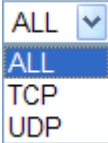

Click the index number link to open the configuration page.

NAT >> Address Mapping

Index No. 1

Enable
 Protocol: ALL ▾
 WAN Interface: WAN1 ▾
 WAN IP: 1-172.16.3.130 ▾
 Private IP:
 Subnet Mask: /32 ▾

Available settings are explained as follows:

| Item | Description |
|----------------------|--|
| Enable | Check to enable this entry. |
| Protocol | Specify the transport layer protocol. It could be TCP , UDP , or ALL for selection.  |
| WAN Interface | Choose the WAN interface for such address mapping profile. |
| WAN IP | This is the source IP of a packet captured on the WAN side and sent by a NAT host specified in the Private IP field. The drop down menu contains WAN interface IPs and WAN IP alias IPs. |
| Private IP | This is the source IP of a NAT host which wishes to send packets to the WAN side and have source address as configured in the WAN IP field. |
| Subnet Mask | Select a value of subnet mask for private IP address. |

After finishing all the settings here, please click **OK** to save the configuration.

4.3.5 Port Triggering

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

[NAT >> Port Triggering](#)

| Port Triggering | | | | | | Set to Factory Default |
|---------------------|---------|---------------------|-----------------|-------------------|---------------|--|

| |  |
| Incoming Port | Type the port or port range for the incoming packets. |

After finishing all the settings here, please click **OK** to save the configuration.

4.4 Firewall

4.4.1 Basics for Firewall

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet. Furthermore, it can filter out specific packets that trigger the router to build an unwanted outgoing connection.

Firewall Facilities

The users on the LAN are provided with secured protection by the following firewall facilities:

- User-configurable IP filter (Call Filter/ Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) /Distributed DoS (DDoS) attacks protection

IP Filters

Depending on whether there is an existing Internet connection, or in other words “the WAN link status is up or down”, the IP filter architecture categorizes traffic into two: **Call Filter** and **Data Filter**.

- **Call Filter** - When there is no existing Internet connection, **Call Filter** is applied to all traffic, all of which should be outgoing. It will check packets according to the filter rules. If legal, the packet will pass. Then the router shall “**initiate a call**” to build the Internet connection and send the packet to Internet.
- **Data Filter** - When there is an existing Internet connection, **Data Filter** is applied to incoming and outgoing traffic. It will check packets according to the filter rules. If legal, the packet will pass the router.

The following illustrations are flow charts explaining how router will treat incoming traffic and outgoing traffic respectively.

Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not just examine the header information also monitor the state of the connection.

Denial of Service (DoS) Defense

The **DoS Defense** functionality helps you to detect and mitigate the DoS attack. The attacks are usually categorized into two types, the flooding-type attacks and the vulnerability attacks. The flooding-type attacks will attempt to exhaust all your system's resource while the vulnerability attacks will try to paralyze the system by offending the vulnerabilities of the protocol or operation system.

The **DoS Defense** function enables the Vigor router to inspect every incoming packet based on the attack signature database. Any malicious packet that might duplicate itself to paralyze the host in the secure LAN will be strictly blocked and a Syslog message will be sent as warning, if you set up Syslog server.

Also the Vigor router monitors the traffic. Any abnormal traffic flow violating the pre-defined parameter, such as the number of thresholds, is identified as an attack and the Vigor router will activate its defense mechanism to mitigate in a real-time manner.

The below shows the attack types that DoS/DDoS defense function can detect:

- | | |
|----------------------|--------------------------|
| 1. SYN flood attack | 9. SYN fragment |
| 2. UDP flood attack | 10. Fraggle attack |
| 3. ICMP flood attack | 11. TCP flag scan |
| 4. Port Scan attack | 12. Tear drop attack |
| 5. IP options | 13. Ping of Death attack |
| 6. Land attack | 14. ICMP fragment |
| 7. Smurf attack | 15. Unknown protocol |
| 8. Trace route | |

Below shows the menu items for Firewall.

4.4.2 General Setup

General Setup allows you to adjust settings of IP Filter and common options. Here you can enable or disable the **Call Filter** or **Data Filter**. Under some circumstance, your filter set can be linked to work in a serial manner. So here you assign the **Start Filter Set** only. Also you can configure the **Log Flag** settings, **Apply IP filter to VPN incoming packets**, and **Accept incoming fragmented UDP packets**.

Click **Firewall** and click **General Setup** to open the general setup page.

Firewall >> General Setup

General Setup

General Setup

Start Filter Set

Set#1

Data Filter

Enable

Disable

Start Filter Set

Set#2

Accept large incoming fragmented UDP or ICMP packets (for some games, ex. CS)

Enable Strict Security Firewall

OK
Cancel

Available settings are explained as follows:

| Item | Description |
|--|--|
| Call Filter | Check Enable to activate the Call Filter function. Assign a start filter set for the Call Filter. |
| Data Filter | Check Enable to activate the Data Filter function. Assign a start filter set for the Data Filter. |
| Accept large incoming... | Some on-line games (for example: Half Life) will use lots of fragmented UDP packets to transfer game data. Instinctively as a secure firewall, Vigor router will reject these fragmented packets to prevent attack unless you enable “ Accept large incoming fragmented UDP or ICMP Packets ”. By checking this box, you can play these kinds of on-line games. If security concern is in higher priority, you cannot enable “ Accept large incoming fragmented UDP or ICMP Packets ”. |
| Enable Strict Security Firewall | For the sake of security, the router will execute strict security checking for data transmission. Such feature is enabled in default. All the packets, while transmitting through Vigor router, will be filtered by firewall. If the firewall system (e.g., content filter server) does not make any response (pass or block) for these packets, then the router’s firewall will block the packets directly. |

After finishing all the settings here, please click **OK** to save the configuration.

Default Rule Page

Such page allows you to choose filtering profiles including QoS, Load-Balance policy, WCF, APP Enforcement, URL Content Filter for data transmission via Vigor router.

Firewall >> General Setup

General Setup

Default Rule

Actions for default rule:

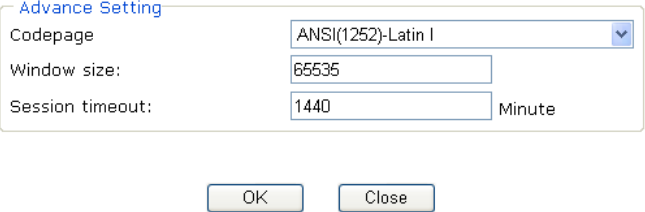

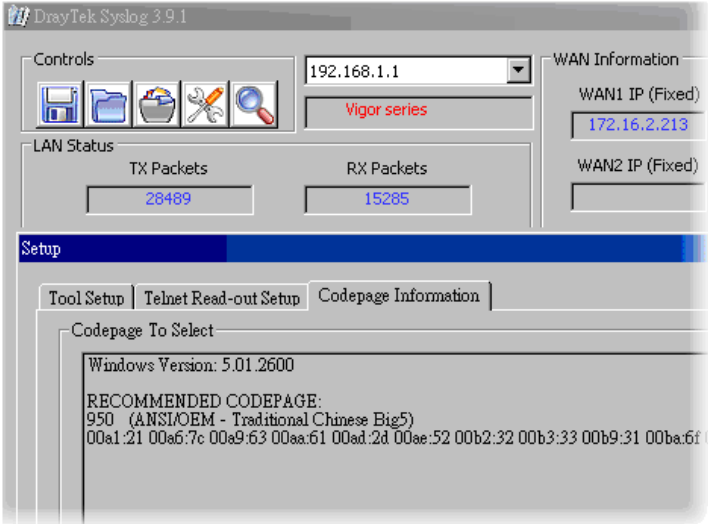

| Application | Action/Profile | Syslog |
|---------------------|--|--------------------------|
| Filter | Pass <input type="button" value="v"/> | <input type="checkbox"/> |
| Sessions Control | 26 / <input type="text" value="60000"/> | <input type="checkbox"/> |
| Quality of Service | None <input type="button" value="v"/> | <input type="checkbox"/> |
| Load-Balance policy | Auto-Select <input type="button" value="v"/> | <input type="checkbox"/> |
| User Management | None <input type="button" value="v"/> | <input type="checkbox"/> |
| APP Enforcement | None <input type="button" value="v"/> | <input type="checkbox"/> |
| URL Content Filter | None <input type="button" value="v"/> | <input type="checkbox"/> |
| Web Content Filter | None <input type="button" value="v"/> | <input type="checkbox"/> |

Advance Setting

Available settings are explained as follows:

| Item | Description |
|---------------------------|---|
| Filter | <p>Select Pass or Block for the packets that do not match with the filter rules.</p> <p>Filter <input style="display: inline-block; vertical-align: middle;" type="button" value="Pass v"/></p> <div style="border: 1px solid #ccc; padding: 2px; display: inline-block; vertical-align: middle;"> Pass v Pass Block </div> |
| Sessions Control | The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 60000. |
| Quality of Service | Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later. |

| Item | Description |
|----------------------------|---|
| | <div data-bbox="683 248 823 456" style="border: 1px solid black; padding: 2px;"> None ▾ None Class 1 Class 2 Class 3 Default </div> |
| Load-Balance Policy | Choose the WAN interface for applying Load-Balance Policy. <div data-bbox="683 517 871 696" style="border: 1px solid black; padding: 2px;"> Auto-Select ▾ Auto-Select WAN1 WAN2 WAN3 </div> |
| User Management | Such item is available only when Rule-Based is selected in User Management>>General Setup . The general firewall rule will be applied to the user/user group/all users specified here. <div data-bbox="683 824 970 1070" style="border: 1px solid black; padding: 2px;"> None ▾ None User Object [Create New User] User Group [Create New Group] ALL </div> <div data-bbox="687 1077 1422 1189" style="border: 1px solid black; padding: 5px;"> <p>Note: When there is no user profile or group profile existed, Create New User or Create New Group item will appear for you to click to create a new one.</p> </div> |
| APP Enforcement | Select an APP Enforcement profile for global IM/P2P application blocking. If there is no profile for you to select, please choose [Create New] from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the APP Enforcement profile selected here. For detailed information, refer to the section of APP Enforcement profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information. |
| URL Content Filter | Select one of the URL Content Filter profile settings (created in CSM>> URL Content Filter) for applying with this router. Please set at least one profile for choosing in CSM>> URL Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for URL Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information. |
| Web Content Filter | Select one of the Web Content Filter profile settings (created in CSM>> Web Content Filter) for applying with this router. Please set at least one profile for anti-virus in CSM>> Web Content Filter web page first. Or choose [Create New] from |

| Item | Description |
|-------------------------------|--|
| | <p>the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for Web Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p> |
| <p>Advance Setting</p> | <p>Click Edit to open the following window. However, it is strongly recommended to use the default settings here.</p> <p>Firewall >> General Setup</p>  <p>Codepage - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage. If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.</p>  <p>Window size – It determines the size of TCP protocol (0~65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.</p> <p>Session timeout – Setting timeout for sessions can make the best utilization of network resources.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

4.4.3 Filter Setup

Click **Firewall** and click **Filter Setup** to open the setup page.

Firewall >> Filter Setup

| Filter Setup | | Set to Factory Default | |
|--------------------|---------------------|--|----------|
| Set | Comments | Set | Comments |
| 1. | Default Call Filter | 7. | |

When the resource is inadequate, the packets will be blocked if Strict Security Checking is enabled. If Strict Security Checking is not enabled, then the packets will pass through the router.</p> <p data-bbox="678 1720 1366 1785">APP Enforcement – Check this box to execute the critical checking for all the files transferred via IM/P2P.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

Example

As stated before, all the traffic will be separated and arbitrated using one of two IP filters: call filter or data filter. You may preset 12 call filters and data filters in **Filter Setup** and even link them in a serial manner. Each filter set is composed by 7 filter rules, which can be further defined. After that, in **General Setup** you may specify one set for call filter and one set for data filter to execute first.

Firewall >> General Setup

General Setup

Call Filter: Enable, Disable. Start Filter Set: Set#1

Data Filter: Enable, Disable. Start Filter Set: Set#2

Accept large incoming fragmented UDP or ICMP packets (for some games, ex. CS)

| <input type="checkbox"/> Block Land | <input type="checkbox"/> Block Tear Drop | | |
| <input type="checkbox"/> Block Smurf | <input type="checkbox"/> Block Ping of Death | | |
| <input type="checkbox"/> Block trace route | <input type="checkbox"/> Block ICMP fragment | | |
| <input type="checkbox"/> Block SYN fragment | <input type="checkbox"/> Block UnknownProtocol | | |
| <input type="checkbox"/> Block Fraggle Attack | | | |

Enable DoS defense function to prevent the attacks from hacker or crackers.

Available settings are explained as follows:

| Item | Description |
|---------------------------------|--|
| Enable Dos Defense | Check the box to activate the DoS Defense Functionality. |
| Select All | Click this button to select all the items listed below. |
| Enable SYN flood defense | <p>Check the box to activate the SYN flood defense function. Once detecting the Threshold of the TCP SYN packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent TCP SYN packets for a period defined in Timeout. The goal for this is prevent the TCP SYN packets' attempt to exhaust the limited-resource of Vigor router.</p> <p>By default, the threshold and timeout values are set to 50 packets per second and 10 seconds, respectively. That means, when 50 packets per second received, they will be regarded as "attack event" and the session will be paused for 10 seconds.</p> |
| Enable UDP flood defense | <p>Check the box to activate the UDP flood defense function. Once detecting the Threshold of the UDP packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent UDP packets for a period defined in Timeout.</p> <p>The default setting for threshold and timeout are 150 packets per</p> |

| Item | Description |
|----------------------------------|--|
| | second and 10 seconds, respectively. That means, when 150 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds. |
| Enable ICMP flood defense | <p>Check the box to activate the ICMP flood defense function. Similar to the UDP flood defense function, once if the Threshold of ICMP packets from Internet has exceeded the defined value, the router will discard the ICMP echo requests coming from the Internet.</p> <p>The default setting for threshold and timeout are 50 packets per second and 10 seconds, respectively. That means, when 50 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds.</p> |
| Enable PortScan detection | <p>Port Scan attacks the Vigor router by sending lots of packets to many ports in an attempt to find ignorant services would respond. Check the box to activate the Port Scan detection. Whenever detecting this malicious exploration behavior by monitoring the port-scanning Threshold rate, the Vigor router will send out a warning.</p> <p>By default, the Vigor router sets the threshold as 150 packets per second. That means, when 150 packets per second received, they will be regarded as “attack event”.</p> |
| Block IP options | <p>Check the box to activate the Block IP options function. The Vigor router will ignore any IP packets with IP option field in the datagram header. The reason for limitation is IP option appears to be a vulnerability of the security for the LAN because it will carry significant information, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages...etc. An eavesdropper outside might learn the details of your private networks.</p> |
| Block Land | <p>Check the box to enforce the Vigor router to defense the Land attacks. The Land attack combines the SYN attack technology with IP spoofing. A Land attack occurs when an attacker sends spoofed SYN packets with the identical source and destination addresses, as well as the port number to victims.</p> |
| Block Smurf | <p>Check the box to activate the Block Smurf function. The Vigor router will ignore any broadcasting ICMP echo request.</p> |
| Block trace router | <p>Check the box to enforce the Vigor router not to forward any trace route packets.</p> |
| Block SYN fragment | <p>Check the box to activate the Block SYN fragment function. The Vigor router will drop any packets having SYN flag and more fragment bit set.</p> |
| Block Fraggle Attack | <p>Check the box to activate the Block fraggle Attack function. Any broadcast UDP packets received from the Internet is blocked.</p> <p>Activating the DoS/DDoS defense functionality might block some legal packets. For example, when you activate the fraggle attack defense, all broadcast UDP packets coming from the Internet are blocked. Therefore, the RIP packets from the</p> |

| Item | Description | | |
|---|---|---|--|
| | Internet might be dropped. | | |
| Block TCP flag scan | Check the box to activate the Block TCP flag scan function. Any TCP packet with anomaly flag setting is dropped. Those scanning activities include <i>no flag scan</i> , <i>FIN without ACK scan</i> , <i>SYN FINscan</i> , <i>Xmas scan</i> and <i>full Xmas scan</i> . | | |
| Block Tear Drop | Check the box to activate the Block Tear Drop function. Many machines may crash when receiving ICMP datagrams (packets) that exceed the maximum length. To avoid this type of attack, the Vigor router is designed to be capable of discarding any fragmented ICMP packets with a length greater than 1024 octets. | | |
| Block Ping of Death | Check the box to activate the Block Ping of Death function. This attack involves the perpetrator sending overlapping packets to the target hosts so that those target hosts will hang once they re-construct the packets. The Vigor routers will block any packets realizing this attacking activity. | | |
| Block ICMP Fragment | Check the box to activate the Block ICMP fragment function. Any ICMP packets with more fragment bit set are dropped. | | |
| Block Unassigned Numbers | Check the box to activate the Block Unknown Protocol function. Individual IP packet has a protocol field in the datagram header to indicate the protocol type running over the upper layer. However, the protocol types greater than 100 are reserved and undefined at this time. Therefore, the router should have ability to detect and reject this kind of packets. | | |
| Warning Messages | <p>We provide Syslog function for user to retrieve message from Vigor router. The user, as a Syslog Server, shall receive the report sending from Vigor router which is a Syslog Client.</p> <p>All the warning messages related to DoS Defense will be sent to user and user can review it through Syslog daemon. Look for the keyword DoS in the message, followed by a name to indicate what kind of attacks is detected.</p> <p style="color: red; font-size: small;">System Maintenance >> SysLog / Mail Alert Setup</p> <hr/> <div style="border: 1px solid gray; padding: 5px;"> <p style="color: red; font-size: small;">SysLog / Mail Alert Setup</p> <table border="0" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; vertical-align: top; border-right: 1px solid gray; padding: 5px;"> <p style="color: red; font-size: small;">SysLog Access Setup</p> <input checked="" type="checkbox"/> Enable Server IP Address <input type="text"/> Destination Port <input type="text" value="514"/> Enable syslog message: <input checked="" type="checkbox"/> Firewall Log <input checked="" type="checkbox"/> VPN Log <input checked="" type="checkbox"/> User Access Log <input checked="" type="checkbox"/> Call Log <input checked="" type="checkbox"/> WAN Log <input checked="" type="checkbox"/> Router/DSL information </td> <td style="width: 50%; vertical-align: top; padding: 5px;"> <p style="color: red; font-size: small;">Mail Alert Setup</p> <input checked="" type="checkbox"/> Enable <input type="button" value="Send a test e-mail"/> SMTP Server <input type="text"/> Mail To <input type="text"/> Return-Path <input type="text"/> <input type="checkbox"/> Authentication User Name <input type="text"/> Password <input type="text"/> Enable E-Mail Alert: <input checked="" type="checkbox"/> DoS Attack <input checked="" type="checkbox"/> IM-P2P </td> </tr> </table> <p style="text-align: center; margin-top: 10px;"> <input type="button" value="OK"/> <input type="button" value="Clear"/> <input type="button" value="Cancel"/> </p> </div> | <p style="color: red; font-size: small;">SysLog Access Setup</p> <input checked="" type="checkbox"/> Enable Server IP Address <input type="text"/> Destination Port <input type="text" value="514"/> Enable syslog message: <input checked="" type="checkbox"/> Firewall Log <input checked="" type="checkbox"/> VPN Log <input checked="" type="checkbox"/> User Access Log <input checked="" type="checkbox"/> Call Log <input checked="" type="checkbox"/> WAN Log <input checked="" type="checkbox"/> Router/DSL information | <p style="color: red; font-size: small;">Mail Alert Setup</p> <input checked="" type="checkbox"/> Enable <input type="button" value="Send a test e-mail"/> SMTP Server <input type="text"/> Mail To <input type="text"/> Return-Path <input type="text"/> <input type="checkbox"/> Authentication User Name <input type="text"/> Password <input type="text"/> Enable E-Mail Alert: <input checked="" type="checkbox"/> DoS Attack <input checked="" type="checkbox"/> IM-P2P |

After finishing all the settings here, please click **OK** to save the configuration.

4.5 User Management

User Management is a security feature which disallows any IP traffic (except DHCP-related packets) from a particular host until that host has correctly supplied a valid username and password. Instead of managing with IP address/MAC address, User Management function manages hosts with user account. Network administrator can give different firewall policies or rules for different hosts with different User Management accounts. This is more flexible and convenient for network management. Not only offering the basic checking for Internet access, User Management also provides additional firewall rules, e.g. CSM checking for protecting hosts.

Note: Filter rules configured under Firewall usually are applied to the host (the one that the router installed) only. With user management, the rules can be applied to every user connected to the router with customized profiles.

Note: If **Transparency Mode** is selected in **Firewall>>General Setup**, User Management cannot be used any more. Please uncheck Transparency Mode first if you want to utilize user management to handle users in LAN, WAN or WLAN.

4.5.1 General Setup

General Setup can determine the standard (rule-based or user-based) for the users controlled by User Management. The mode (standard) selected here will influence the contents of the filter rule(s) applied to every user.

User Management >> General Setup

General Setup

Mode:

Web Authentication:

Notice :

1. User Management will refer to active rules in Data Filter as whitelists and blacklists in user-based firewall mode.
2. Users match the above lists will not be required for authentication. The firewall rules policy will still valid.
3. Otherwise, authentication required for users not matched the above lists. The firewall rules designated in the user profile's policy will still valid.

| <input type="checkbox"/> Enable | Default Time Quota <input type="text" value="0"/> min. Default Data Quota <input type="text" value="0"/> MB |

Available settings are explained as follows:

| Item | Description |
|----------------------------|---|
| Enable this account | Check this box to enable such user profile. |
| User Name | Type a name for such user profile (e.g., <i>LAN_User_Group_1</i> , <i>WLAN_User_Group_A</i> , <i>WLAN_User_Group_B</i> , etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to type the User Name specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router. However the accessing operation will be restricted with the conditions configured in this user profile. |
| Password | Type a password for such profile (e.g., <i>lug123</i> , <i>wug123</i> , <i>wug456</i> , etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to type the password specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router with the limitation configured in this user profile. |
| Confirm Password | Type the password again for confirmation. |
| Idle Timeout | If the user is idle over the limitation of the timer, the network connection will be stopped for such user . By default, the Idle Timeout is set to 10 minutes. |

| Item | Description |
|--|--|
| Max User Login | Such profile can be used by many users. You can set the limitation for the number of users accessing Internet with the conditions of such profile. The default setting is 0 which means no limitation in the number of users. |
| Policy | <p>It is available only when User-Based mode selected in User Management>>General Setup.</p>  <p>Default – If you choose such item, the filter rules pre-configured in Firewall can be adopted for such user profile.</p> <p>Create New Policy – If you choose such item, the following page will be popped up for you to define another filter rule as a new policy.</p> <p style="text-align: center;">Firewall >> Edit Filter Set >> Edit Filter Rule</p>  <p>For the detailed configuration, simply refer to Firewall>>Filter Rule. The firewall filter rules that are not selected in Firewall>>General>>Default rule can be available for use in User Management>>User Profile.</p> |
| External Service Authentication | <p>The router will authenticate the dial-in user by itself or by external service such as LDAP server or Radius server. If LDAP or Radius is selected here, it is not necessary to configure the password setting above.</p>  |
| Log | <p>Time of login/log out, block/unblock for the user(s) can be sent to and displayed in Syslog. Please choose any one of the log items to take down relational records for the user(s).</p>  |
| Pop Browser Tracking | If such function is enabled, a pop up window will be displayed |

| Item | Description |
|---------------------------------------|--|
| Window | on the screen with time remaining for connection if Idle Timeout is set. However, the system will update the time periodically to keep the connection always on. Thus, Idle Timeout will not interrupt the network connection. |
| Authentication | <p>Any user (from LAN side or WLAN side) tries to connect to Internet via Vigor router must be authenticated by the router first. There are three ways offered by the router for the user to choose for authentication.</p> <p>Web – If it is selected, the use can type the URL of the router from any browser. Then, a login window will be popped up and ask the user to type the user name and password for authentication. If succeed, a Welcome Message (configured in User Management >> General Setup) will be displayed. After authentication, the destination URL (if requested by the user) will be guided automatically by the router.</p> <p>Alert Tool – If it is selected, the user can open Alert Tool and type the user name and password for authentication. A window with remaining time of connection for such user will be displayed. Next, the user can access Internet through any browser on Windows. Note that Alert Tool can be downloaded from DrayTek web site.</p> <p>Telnet – If it is selected, the user can use Telnet command to perform the authentication job.</p> |
| Landing Page | <p>When a user tries to access into the web user interface of Vigor2920 series with the user name and password specified in this profile, he/she will be lead into the web page configured in Landing Page field in User Management>>General Setup. Check this box to enable such function.</p> |
| Index (1-15) in Schedule Setup | <p>You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.</p> |
| Enable Time Quota | <p>Time quota means the total connection time allowed by the router for the user with such profile. Check the box to enable the function of time quota. Then, type the number of time (unit is minute) which is available for the user (using such profile) to access Internet in the value box. The unit is minutes.</p> <p><input type="checkbox"/> + – Click this box to set and increase the time quota for such profile.</p> <p><input type="checkbox"/> - – Click this box to decrease the time quota for such profile.</p> |
| Enable Data Quota | <p>Data Quota means the total amount for data transmission allowed for the user. The unit is MB.</p> <p><input type="checkbox"/> + – Click this box to set and increase the data quota for such profile.</p> <p><input type="checkbox"/> - – Click this box to decrease the data quota for such profile.</p> |

| Item | Description |
|--|--|
| Reset quota to default when scheduling time expired | <p>Set default time quota and data quota for such profile. When the scheduling time is up, the router will use the default quota settings automatically.</p> <p>Enable – Check it to use the default setting for time quota and data quota.</p> <p>Default Time Quota – Type the value for the time manually.</p> <p>Default Data Quota – Type the value for the data manually.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

4.5.3 User Group

This page allows you to bind several user profiles into one group. These groups will be used in **Firewall>>General Setup** as part of filter rules.

User Group Table: | [Set to Factory Default](#) |

| Index | Name | Index | Name |
|---------------------|------|---------------------|------|
| 1. | | 17. | |
| 2. | | 18. | |
| 3. | | 19. | |

- 3-LAN_User_Group_1
- 4-WLAN_User_Group_A
- 5-WLAN_User_Group_B

>>

<<

Selected User Objects(Max 32 Objects)

OK Clear Cancel

Available settings are explained as follows:

| Item | Description |
|-------------------------------|--|
| Name | Type a name for this user group. |
| Available User Objects | You can gather user profiles (objects) from User Profile page within one user group. All the available user objects that you have created will be shown in this box. Notice that user object, Admin and Dial-In User are factory settings. User defined profiles will be numbered with 3, 4, 5 and so on. |
| Selected User Objects | Click  button to add the selected user objects in this box. |

After finishing all the settings here, please click **OK** to save the configuration.

4.5.4 User Online Status

This page displays the user(s) connected to the router and refreshes the connection status in an interval of several seconds.

[User Management >> User Online Status](#)

Current Time : 10-27 06:24:50 Refresh Seconds: Page: | [Refresh](#)

| Index | Active User | IP Address | Last Login Time | Expired Time | Idle Time | Action |
|-------|-----------------------|--------------|-----------------|--------------|-----------|--|
| 1 | admin | 192.168.1.10 | 10-27 03:57:23 | Unlimited | Unlimited | Block Logout |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Total Number : 1

Available settings are explained as follows:

| Item | Description |
|------------------------|---|
| Refresh Seconds | Use the drop down list to choose the time interval of refreshing data flow that will be done by the system automatically. Refresh Seconds: <input type="text" value="10"/> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> 10 15 30 </div> |
| Refresh | Click this link to refresh this page manually. |
| Index | Display the number of the data flow. |
| Active User | Display the users which connect to Vigor router currently. You can click the link under the username to open the user profile setting page for that user. |

| Item | Description |
|------------------------|---|
| IP Address | Display the IP address of the device. |
| Last Login Time | Display the login time that such user connects to the router last time. |
| Expired Time | Display the expired time of the network connection for the user. |
| Idle Time | Display the idle timeout setting for such profile. |
| Action | Block - can prevent specified user accessing into Internet. Unblock – the user will be blocked. Logout – the user will be logged out forcefully. |

4.6 Objects Settings

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with *objects* and bind them with *groups* for using conveniently. Later, we can select that object/group that can apply it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address).

4.6.1 IP Object

You can set up to 192 sets of IP Objects with different conditions.

[Objects Setting >> IP Object](#)

<< [1-32](#) | [33-64](#) | [65-96](#) | [97-128](#) | [129-160](#) | [161-192](#) | [193-200](#) >> [Next](#) >>

Available settings are explained as follows:

| Item | Description |
|-------------------------------|--|
| Set to Factory Default | Clear all profiles. |
| Index | Display the profile number that you can configure. |
| Name | Display the name of the object profile. |

To set a new profile, please do the steps listed below:

1. Click the number (e.g., #1) under Index column for configuration in details.

[Objects Setting >> Keyword Object](#)

Keyword Object Profiles:

| Index | Name |
|--------------------|------|
| 1. | |
| 2. | |
| 3. | |

2. The configuration page will be shown as follows:

Objects Setting >> Keyword Object Setup

Profile Index : 1

| | |
|----------|----------------------|
| Name | <input type="text"/> |
| Contents | <input type="text"/> |

Limit of Contents: Max 3 Words and 63 Characters.
Each word should be separated by a single space.

You can replace a character with %HEX.
Example:
Contents: backdoo%72 virus keep%20out

Result:
1. backdoor
2. virus
3. keep out

Available settings are explained as follows:

| Item | Description |
|-----------------|--|
| Name | Type a name for this profile, e.g., game. |
| Contents | Type the content for such profile. For example, type <i>gambling</i> as Contents. When you browse the webpage, the page with gambling information will be watched out and be passed/blocked based on the configuration on Firewall settings. |

3. After finishing all the settings here, please click **OK** to save the configuration.

Objects Setting >> Keyword Object

Keyword Object Profiles: [Set to Factory Default](#)

| 2. | | 6. | |
| 3. | | 7. | |
| 4. | | 8. | |

4.6.10 SMS/Mail Service Object

SMS Service Object

This page allows you to set ten profiles which will be applied in **Application>>SMS/Mail Alert Service**.

[Object Settings >> SMS / Mail Service Object](#)

| SMS Provider | | Mail Server | Set to Factory Default |
|---------------------|--------------|--------------------|--|
| Index | Profile Name | SMS Provider | |
| 1. | | kotsms.com.tw (TW) | |
| 2. | | kotsms.com.tw (TW) | |
| 3. | | kotsms.com.tw (TW) | |
| 4. | | kotsms.com.tw (TW) | |
| 5. | | kotsms.com.tw (TW) | |
| 6. | | kotsms.com.tw (TW) | |
| 7. | | kotsms.com.tw (TW) | |
| 8. | | kotsms.com.tw (TW) | |
| 9. | Custom 1 | | |
| 10. | Custom 2 | | |

Each item is explained as follows:

| Item | Description |
|-------------------------------|---|
| Set to Factory Default | Clear all of the settings and return to factory default settings. |
| Index | Display the profile number that you can configure. |
| Profile Name | Display the name for such SMS profile. |
| SMS Provider | Display the service provider which offers SMS service. |

To set a new profile, please do the steps listed below:

1. Click the **SMS Provider** tab, and click the number (e.g., #1) under Index column for configuration in details.

[Object Settings >> SMS / Mail Service Object](#)

| SMS Provider | | Mail Server |
|--------------------|--------------|-------------|
| Index | Profile Name | |
| 1. | | |
| 2. | | |
| 3. | | |

- The configuration page will be shown as follows:

Object Settings >> SMS / Mail Service Object

Profile Index: 1

| | |
|------------------|---|
| Profile Name | <input type="text" value="Line_down"/> |
| Service Provider | <input type="text" value="kotsms.com.tw (TW)"/> |
| Username | <input type="text" value="line1"/> |
| Password | <input type="password" value="****"/> |
| Quota | <input type="text" value="10"/> |
| Sending Interval | <input type="text" value="3"/> (seconds) |

Available settings are explained as follows:

| Item | Description |
|-------------------------|---|
| Profile Name | Type a name for such SMS profile. |
| Service Provider | Use the drop down list to specify the service provider which offers SMS service. |
| Username | Type a user name that the sender can use to register to selected SMS provider. |
| Password | Type a password that the sender can use to register to selected SMS provider. |
| Quota | Type the number (e.g., 5, 10, etc.) of the SMS text message allowed to be sent out by this profile. When WAN interface disconnects frequently, the text message will be sent for several time (e.g., 5, 10, etc.) within the time interval. Once the quota ran out, no SMS will be sent out. Note: The number of the credit can be purchased from the service provider chosen above. One credit equals to one SMS text message on the standard route. |
| Sending Interval | To avoid quota being exhausted soon, type time interval for sending the SMS. |

- After finishing all the settings here, please click **OK** to save the configuration.

Object Settings >> SMS / Mail Service Object

| SMS Provider | Mail Server | Set to Factory Default |
|--------------|--------------|--|
| Index | Profile Name | SMS Provider |
| 1. | Line_down | kotsms.com.tw (TW) |
| 2. | | kotsms.com.tw (TW) |
| 3. | | kotsms.com.tw (TW) |

Customized SMS Service

Vigor router offers several SMS service provider to offer the SMS service. However, if your service provider cannot be found from the service provider list, simply use Index 9 and Index 10 to make customized SMS service. The profile name for Index 9 and Index 10 are fixed.

Object Settings >> SMS / Mail Service Object

| SMS Provider | Mail Server | | Set to Factory Default |
|--------------|-------------|---------------------|--|
| | | Index | Profile Name |
| | | SMS Provider | |
| | | 1. | kotsms.com.tw (TW) |
| | | 2. | kotsms.com.tw (TW) |
| | | 3. | kotsms.com.tw (TW) |
| | | 4. | kotsms.com.tw (TW) |
| | | 5. | kotsms.com.tw (TW) |
| | | 6. | kotsms.com.tw (TW) |
| | | 7. | kotsms.com.tw (TW) |
| | | 8. | kotsms.com.tw (TW) |
| | | 9. | Custom 1 |
| | | 10. | Custom 2 |

You can click the number (e.g., #9) under Index column for configuration in details.

Object Settings >> SMS / Mail Service Object

Profile Index: 9

| | |
|--|--|
| Profile Name | <input type="text" value="Custom 1"/> |
| Service Provider | <input type="text"/> |
| <div style="border: 1px solid black; height: 40px; width: 100%;"></div> | |
| <p>Please contact with your SMS provide to get the exact URL String eg: bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0?username=###txtUser### &password=###txtPwd###&msisdn=###txtDest###&message=###txtMsg###</p> | |
| Username | <input type="text"/> |
| Password | <input type="text"/> |
| Quota | <input type="text" value="10"/> |
| Sending Interval | <input type="text" value="3"/> (seconds) |

Available settings are explained as follows:

| Item | Description |
|-------------------------|--|
| Profile Name | Display the name of this profile. It cannot be modified. |
| Service Provider | Type the website of the service provider. Type the URL string in the box under the filed of Service Provider. You have to contact your SMS provider to obtain the exact URL string. |

| | |
|-------------------------|--|
| Username | Type a user name that the sender can use to register to selected SMS provider. |
| Password | Type a password that the sender can use to register to selected SMS provider. |
| Quota | Type the total number of the messages that the router will send out. |
| Sending Interval | Type the shortest time interval for the system to send SMS. |

After finishing all the settings here, please click **OK** to save the configuration.

Mail Service Object

This page allows you to set ten profiles which will be applied in **Application>>SMS/Mail Alert Service**.

[Object Settings >> SMS / Mail Service Object](#)

| SMS Provider | Mail Server | Set to Factory Default |

| <u>1.</u> | Notify_attack | WAN |
| <u>2.</u> | | |
| <u>3.</u> | | |
| <u>4.</u> | | |

4.7 CSM Profile

Content Security Management (CSM)

CSM is an abbreviation of **Content Security Management** which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

APP Enforcement Filter

As the popularity of all kinds of instant messenger application arises, communication cannot become much easier. Nevertheless, while some industry may leverage this as a great tool to connect with their customers, some industry may take reserve attitude in order to reduce employee misuse during office hour or prevent unknown security leak. It is similar situation for corporation towards peer-to-peer applications since file-sharing can be convenient but insecure at the same time. To address these needs, we provide CSM functionality.

URL Content Filter

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

Web Content Filter

We all know that the content on the Internet just like other types of media may be inappropriate sometimes. As a responsible parent or employer, you should protect those in your trust against the hazards. With Web filtering service of the Vigor router, you can protect your business from common primary threats, such as productivity, legal liability, network and security threats. For parents, you can protect your children from viewing adult websites or chat rooms.

Once you have activated your Web Filtering service in Vigor router and chosen the categories of website you wish to restrict, each URL address requested (e.g. www.bbc.co.uk) will be checked against our server database. This database is updated as frequent as daily by a global team of Internet researchers. The server will look up the URL and return a category to your router. Your Vigor router will then decide whether to allow access to this site according to the categories you have selected. Please note that this action will not introduce any delay in your Web surfing because each of multiple load balanced database servers can handle millions of requests for categorization.

Note: The priority of URL Content Filter is higher than Web Content Filter.

4.7.1 APP Enforcement Profile

You can define policy profiles for IM (Instant Messenger)/P2P (Peer to Peer)/Protocol/Misc application. This page allows you to set 32 profiles for different requirements. The APP Enforcement Profile will be applied in **Default Rule of Firewall>>General Setup** for filtering.

CSM >> APP Enforcement Profile

APP Enforcement Profile Table:

| [Set to Factory Default](#) |

| Profile | Name | Profile | Name |
|---------------------|------|---------------------|------|
| 1. | | 17. | |
| 2. | | 18. | |
| 3. | | 19. | |
| 4. | | 20. | |
| 5. | | 21. | |
| 6. | | 22. | |
| 7. | | 23. | |
| 8. | | 24. | |
| 9. | | 25. | |
| 10. | | 26. | |
| 11. | | 27. | |
| 12. | | 28. | |
| 13. | | 29. | |
| 14. | | 30. | |
| 15. | | 31. | |
| 16. | | 32. | |

Each item is explained as follows:

| Item | Description |
|-------------------------------|--|
| Set to Factory Default | Clear all profiles. |
| Profile | Display the number of the profile which allows you to click to set different policy. |
| Name | Display the name of the APP Enforcement Profile. |

Click the number under Index column for settings in detail.

There are four tabs IM, P2P, Protocol and Misc displayed on this page. Each tab will bring out different items that you can choose to disallow people using.

Below shows the items which are categorized under **IM**.

CSM >> APP Enforcement Profile

Profile Index : 1 Profile Name:

| IM | P2P | Protocol | Misc | |
|---|--|-------------------------------------|--|--|
| <input type="button" value="Select All"/> | <input type="button" value="Clear All"/> | | | |

4.7.2 URL Content Filter Profile

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

For example, if you add key words such as "sex", Vigor router will limit web access to web sites or web pages such as "www.sex.com", "www.backdoor.net/images/sex/p_386.html". Or you may simply specify the full or partial URL such as "www.sex.com" or "sex.com".

Also the Vigor router will discard any request that tries to retrieve the malicious code.

Click **CSM** and click **URL Content Filter Profile** to open the profile setting page.

CSM >> URL Content Filter Profile

URL Content Filter Profile Table: | [Set to Factory Default](#) |

| Profile | Name | Profile | Name |

2.Web Feature

Enable Restrict Web Feature

Action: Cookie Proxy Upload File Extension Profile:

Available settings are explained as follows:

| Item | Description |
|---------------------|--|
| Profile Name | Type a name for the CSM profile. |
| Priority | <p>It determines the action that this router will apply.</p> <p>Both: Pass – The router will let all the packages that match with the conditions specified in URL Access Control and Web Feature below passing through. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p>Both: Block –The router will block all the packages that match with the conditions specified in URL Access Control and Web Feature below. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p>Either: URL Access Control First – When all the packages matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for URL first, then Web feature second.</p> <p>Either: Web Feature First –When all the packages matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for</p> |

| Item | Description |
|---------------------------|---|
| | <p>web feature first, then URL second.</p>  |
| Log | <p>None – There is no log file will be recorded for this profile. Pass – Only the log about Pass will be recorded in Syslog. Block – Only the log about Block will be recorded in Syslog. All – All the actions (Pass and Block) will be recorded in Syslog.</p>  |
| URL Access Control | <p>Enable URL Access Control - Check the box to activate URL Access Control. Note that the priority for URL Access Control is higher than Restrict Web Feature. If the web content match the setting set in URL Access Control, the router will execute the action specified in this field and ignore the action specified under Restrict Web Feature.</p> <p>Prevent web access from IP address - Check the box to deny any web surfing activity using IP address, such as http://202.6.3.2. The reason for this is to prevent someone dodges the URL Access Control. You must clear your browser cache first so that the URL content filtering facility operates properly on a web page that you visited before.</p> <p>Action – This setting is available only when Either : URL Access Control First or Either : Web Feature First is selected. Pass - Allow accessing into the corresponding webpage with the keywords listed on the box below. Block - Restrict accessing into the corresponding webpage with the keywords listed on the box below. If the web pages do not match with the keyword set here, it will be processed with reverse action.</p> <p>Action:</p>  <p>Group/Object Selections – The Vigor router provides several frames for users to define keywords and each frame supports multiple keywords. The keyword could be a noun, a partial noun, or a complete URL string. Multiple keywords within a frame are separated by space, comma, or semicolon. In addition, the maximal length of each frame is 32-character long. After specifying keywords, the Vigor router will decline the connection request to the website whose URL</p> |

| Item | Description |
|---------------------------|---|
| | <p>string matched to any user-defined keyword. It should be noticed that the more simplified the blocking keyword list is, the more efficiently the Vigor router performs.</p>  |
| <p>Web Feature</p> | <p>Enable Restrict Web Feature - Check this box to make the keyword being blocked or passed.</p> <p>Action - This setting is available only when Either: URL Access Control First or Either: Web Feature First is selected. Pass allows accessing into the corresponding webpage with the keywords listed on the box below.</p> <p>Pass - Allow accessing into the corresponding webpage with the keywords listed on the box below.</p> <p>Block - Restrict accessing into the corresponding webpage with the keywords listed on the box below. If the web pages do not match with the specified feature set here, it will be processed with reverse action.</p> <p>Cookie - Check the box to filter out the cookie transmission from inside to outside world to protect the local user's privacy.</p> <p>Proxy - Check the box to reject any proxy transmission. To control efficiently the limited-bandwidth usage, it will be of great value to provide the blocking mechanism that filters out the multimedia files downloading from web pages.</p> <p>Upload - Check the box to block the file upload by way of web page.</p> <p>File Extension Profile - Choose one of the profiles that you configured in Object Setting>> File Extension Objects previously for passing or blocking the file downloading.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

4.7.3 Web Content Filter Profile

Note: Web Content Filter (WCF) service is powered by **CommTouch**, the partner of DrayTek. The product name is GlobalView WCF.

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

Service Activation Wizard allows you to use trial version or update the license of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>.

However, if you use the **Web Content Filter Profile** page to activate WCF feature, it is necessary for you to access into the server (**MyVigor**) located on <http://myvigor.draytek.com>. Therefore, you need to register an account on <http://myvigor.draytek.com> for using corresponding service. Please refer to section of creating MyVigor account.

WCF adopts the mechanism developed and offered by certain service provider (e.g., DrayTek). No matter activating WCF feature or getting a new license for web content filter, you have to click **Activate** to satisfy your request. Be aware that service provider matching with Vigor router currently offers a period of time for trial version for users to experiment. If you want to purchase a formal edition, simply contact with the channel partner or your dealer.

Click **CSM** and click **Web Content Filter Profile** to open the profile setting page. The default setting for Setup Query Server /Setup Test Server is **auto-selected**. You can choose another server for your necessity by clicking **Find more** to open <http://myvigor.draytek.com> for searching another qualified and suitable one.

<br>that is categorized with %$CL% <br>has been blocked by %$RNAME% Web Content
Filter.<p>Please contact your system administrator for further
information.</center></body>
```

Available settings are explained as follows:

| Item | Description |
|---------------------------|--|
| Activate | Click it to access into MyVigor for activating WCF service. |
| Setup Query Server | It is recommended for you to use the default setting, auto-selected. You need to specify a server for categorize |

| Item | Description |
|-------------------------------|---|
| | searching when you type URL in browser based on the web content filter profile. Such server is powered by Commtouch. |
| Setup Test Server | It is recommended for you to use the default setting, auto-selected. Such server is powered by Commtouch. |
| Find more | Click it to open http://myvigor.draytek.com for searching another qualified and suitable server. |
| Set to Factory Default | Click this link to retrieve the factory settings. |
| Default Message | You can type the message manually for your necessity or click this button to get the default message which will be displayed on the field of Administration Message . |
| Cache | <p>None – the router will check the URL that the user wants to access via WCF precisely, however, the processing rate is normal. Such item can provide the most accurate URL matching.</p> <p>L1 – the router will check the URL that the user wants to access via WCF. If the URL has been accessed previously, it will be stored for a short time (about 1 second) in the router to be accessed quickly if required. Such item can provide accurate URL matching with faster rate.</p> <p>L2 – the router will check the URL that the user wants to access via WCF. If the data has been accessed previously, the IP addresses of source and destination IDs will be memorized for a short time (about 1 second) in the router. When the user tries to access the same destination ID, the router will check it by comparing the record stored. If it matches, the page will be retrieved quickly. Such item can provide URL matching with the fastest rate.</p> <p>L1+L2 Cache – the router will check the URL with fast processing rate combining the feature of L1 and L2.</p> |

Eight profiles are provided here as Web content filters. Simply click the index number under Profile to open the following web page. The items listed in Categories will be changed according to the different service providers. If you have and activate another web content filter license, the items will be changed simultaneously. All of the configuration made for web content filter will be deleted automatically. Therefore, please backup your data before you change the web content filter license.

4.8 Bandwidth Management

Below shows the menu items for Bandwidth Management.

4.8.1 Sessions Limit

A PC with private IP address can access to the Internet via NAT router. The router will generate the records of NAT sessions for such connection. The P2P (Peer to Peer) applications (e.g., BitTorrent) always need many sessions for procession and also they will occupy over resources which might result in important accesses impacted. To solve the problem, you can use limit session to limit the session procession for specified Hosts.

In the **Bandwidth Management** menu, click **Sessions Limit** to open the web page.

Bandwidth Management >> Sessions Limit

Sessions Limit

Enable
 Disable

Default Max Sessions:

Limitation List

| Index | Start IP | End IP | Max Sessions |
|-------|----------|--------|--------------|
| | | | |

Specific Limitation

Start IP: End IP:

Maximum Sessions:

Administration Message (Max 256 characters)

Time Schedule

Index(1-15) in **Schedule** Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

To activate the function of limit session, simply click **Enable** and set the default session limit. Available settings are explained as follows:

| Item | Description |
|------|-------------|
|------|-------------|

| Item | Description |
|---------------------------------------|---|
| Enable | Click this button to activate the function of limit session. |
| Disable | Click this button to close the function of limit session. |
| Default session limit | Defines the default session number used for each computer in LAN. |
| Limitation List | Displays a list of specific limitations that you set on this web page. |
| Start IP | Defines the start IP address for limit session. |
| End IP | Defines the end IP address for limit session. |
| Maximum Sessions | Defines the available session number for each host in the specific range of IP addresses. If you do not set the session number in this field, the system will use the default session limit for the specific limitation you set for each index. |
| Add | Adds the specific session limitation onto the list above. |
| Edit | Allows you to edit the settings for the selected limitation. |
| Delete | Remove the selected settings existing on the limitation list. |
| Administration Message | Type the words which will be displayed when reaches the maximum number of Internet sessions permitted. |
| Default Message | Click this button to apply the default message offered by the router. |
| Index (1-15) in Schedule Setup | You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page. |

After finishing all the settings here, please click **OK** to save the configuration.

4.8.2 Bandwidth Limit

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Limit Bandwidth to make the bandwidth usage more efficient.

In the **Bandwidth Management** menu, click **Bandwidth Limit** to open the web page.

[Bandwidth Management >> Bandwidth Limit](#)

Bandwidth Limit

Enable
 IP Routed Subnet
 Disable

Default TX Limit:
 Default RX Limit:

Allow auto adjustment to make the best utilization of **available bandwidth**.

Limitation List

| Index | Start IP | End IP | TX limit | RX limit | Shared |
|-------|----------|--------|----------|----------|--------|
| | | | | | |

Specific Limitation

Start IP: End IP:

|------------------------------|---|
| | <p>downstream for each computer in LAN.</p> <p>Allow auto adjustment...- Check this box to make the best utilization of available bandwidth.</p> |
| Limitation List | <p>Display a list of specific limitations that you set on this web page.</p> |
| Specific Limitation | <p>Start IP - Define the start IP address for limit bandwidth.</p> <p>End IP - Define the end IP address for limit bandwidth.</p> <p>Each /Shared - Select Each to make each IP within the range of Start IP and End IP having the same speed defined in TX limit and RX limit fields; select Shared to make all the IPs within the range of Start IP and End IP share the speed defined in TX limit and RX limit fields.</p> <p>TX limit - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p>RX limit - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p>Add - Add the specific speed limitation onto the list above.</p> <p>Update - Allow you to edit the settings for the selected limitation.</p> <p>Delete - Remove the selected settings existing on the limitation list.</p> |
| Smart Bandwidth Limit | <p>Check this box to have the bandwidth limit determined by the system automatically.</p> <p>TX limit - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p>RX limit - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> |
| Time Schedule | <p>Index (1-15) in Schedule Setup - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

4.8.3 Quality of Service

Deploying QoS (Quality of Service) management to guarantee that all applications receive the service levels required and sufficient bandwidth to meet performance expectations is indeed one important aspect of modern enterprise network.

One reason for QoS is that numerous TCP-based applications tend to continually increase their transmission rate and consume all available bandwidth, which is called TCP slow start. If other applications are not protected by QoS, it will detract much from their performance in the overcrowded network. This is especially essential to those are low tolerant of loss, delay or jitter (delay variation).

Another reason is due to congestions at network intersections where speeds of interconnected circuits mismatch or traffic aggregates, packets will queue up and traffic can be throttled back to a lower speed. If there's no defined priority to specify which packets should be discarded (or in another term "dropped") from an overflowing queue, packets of sensitive applications mentioned above might be the ones to drop off. How this will affect application performance?

There are two components within Primary configuration of QoS deployment:

- Classification: Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- Scheduling: Based on classification of service level to assign packets to queues and associated service types

The basic QoS implementation in Vigor routers is to classify and schedule packets based on the service type information in the IP header. For instance, to ensure the connection with the headquarter, a teleworker may enforce an index of QoS Control to reserve bandwidth for HTTPS connection while using lots of application at the same time.

One more larger-scale implementation of QoS network is to apply DSCP (Differentiated Service Code Point) and IP Precedence disciplines at Layer 3. Compared with legacy IP Precedence that uses Type of Service (ToS) field in the IP header to define 8 service classes, DSCP is a successor creating 64 classes possible with backward IP Precedence compatibility. In a QoS-enabled network, or Differentiated Service (DiffServ or DS) framework, a DS domain owner should sign a Service License Agreement (SLA) with other DS domain owners to define the service level provided toward traffic from different domains. Then each DS node in these domains will perform the priority treatment. This is called per-hop-behavior (PHB). The definition of PHB includes Expedited Forwarding (EF), Assured Forwarding (AF), and Best Effort (BE). AF defines the four classes of delivery (or forwarding) classes and three levels of drop precedence in each class.

Vigor routers as edge routers of DS domain shall check the marked DSCP value in the IP header of bypassing traffic, thus to allocate certain amount of resource execute appropriate policing, classification or scheduling. The core routers in the backbone will do the same checking before executing treatments in order to ensure service-level consistency throughout the whole QoS-enabled network.

However, each node may take different attitude toward packets with high priority marking since it may bind with the business deal of SLA among different DS domain owners. It's not easy to achieve deterministic and consistent high-priority QoS traffic throughout the whole network with merely Vigor router's effort.

In the **Bandwidth Management** menu, click **Quality of Service** to open the web page.

| | service type. |
| Enable the First Priority for VoIP SIP/RTP | When this feature is enabled, the VoIP SIP/UDP packets will be sent with highest priority. SIP UDP Port – Set a port number used for SIP. |

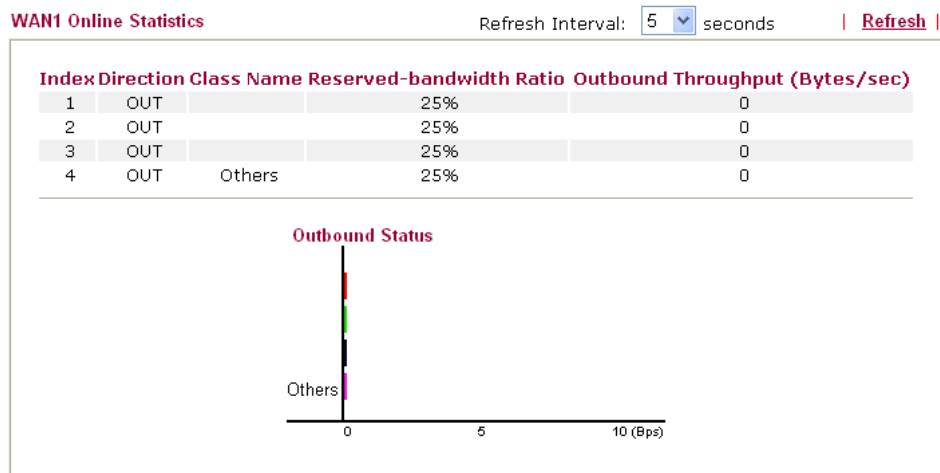

This page displays the QoS settings result of the WAN interface. Click the **Setup** link to access into next page for the general setup of WAN interface. As to class rule, simply click the **Edit** link to access into next for configuration.

You can configure general setup for the WAN interface, edit the Class Rule, and edit the Service Type for the Class Rule for your request.

Online Statistics

Display an online statistics for quality of service for your reference. This feature is available only when the Quality of Service for WAN interface is enabled.

[Bandwidth Management >> Quality of Service](#)

General Setup for WAN Interface

When you click **Setup**, you can configure the bandwidth ratio for QoS of the WAN interface. There are four queues allowed for QoS control. The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. Yet, the last one is reserved for the packets which are not suitable for the user-defined class rules.

WAN2 General Setup

Enable the QoS Control OUT v

| | | |
|---|-------------------|--|
| WAN Inbound Bandwidth | 10000 | Kbps |
| WAN Outbound Bandwidth | 10000 | Kbps |
| Index | Class Name | Reserved_bandwidth Ratio |
| Class 1 | | 25 % |
| Class 2 | | 25 % |
| Class 3 | | 25 % |
| | Others | 25 % |
| <input type="checkbox"/> Enable UDP Bandwidth Control | | Limited_bandwidth Ratio 25 % |
| <input type="checkbox"/> Outbound TCP ACK Prioritize | | |

Available settings are explained as follows:

| Item | Description |
|-------------------------------------|--|
| Enable the QoS Control | The factory default for this setting is checked. Please also define which traffic the QoS Control settings will apply to. IN- apply to incoming traffic only. OUT- apply to outgoing traffic only. BOTH- apply to both incoming and outgoing traffic. Check this box and click OK , then click Setup link again. You will see the Online Statistics link appearing on this page. |
| WAN Inbound Bandwidth | It allows you to set the connecting rate of data input for WAN. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 1000kbps for this box. The default value is 10000kbps. |
| WAN Outbound Bandwidth | It allows you to set the connecting rate of data output for WAN. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 256kbps for this box. The default value is 10000kbps. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> Note: The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance. </div> |
| Reserved Bandwidth Ratio | It is reserved for the group index in the form of ratio of reserved bandwidth to upstream speed and reserved bandwidth to downstream speed . |
| Enable UDP Bandwidth Control | Check this and set the limited bandwidth ratio on the right field. This is a protection of TCP application traffic since UDP application traffic such as streaming video will exhaust lots of |

| Item | Description |
|------------------------------------|---|
| | bandwidth. |
| Outbound TCP ACK Prioritize | The difference in bandwidth between download and upload are great in ADSL2+ environment. For the download speed might be impacted by the uploading TCP ACK, you can check this box to push ACK of upload faster to speed the network traffic. |
| Limited_bandwidth Ratio | The ratio typed here is reserved for limited bandwidth of UDP application. |

Edit the Class Rule for QoS

- The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. To add, edit or delete the class rule, please click the **Edit** link of that one.

Bandwidth Management >> Quality of Service

| Port Number | <input type="text" value="0"/> - <input type="text" value="0"/> |

Available settings are explained as follows:

| Item | Description |
|---------------------------|---|
| Service Name | Type in a new service for your request. |
| Service Type | Choose the type (TCP, UDP or TCP/UDP) for the new service. |
| Port Configuration | <p>Click Single or Range as the Type. If you select Range, you have to type in the starting port number and the end porting number on the boxes below.</p> <p>Port Number – Type in the starting port number and the end porting number here if you choose Range as the type.</p> |

- By the way, you can set up to 10 service types. If you want to edit/delete an existed service type, please select the radio button of that one and click **Edit/Edit** for modification.

Retag the Packets for Identification

Packets coming from LAN IP can be retagged through QoS setting. When the packets sent out through WAN interface, all of them will be tagged with certain header and that will be easily to be identified by server on ISP.

For example, in the following illustration, the VoIP packets in LAN go into Vigor router without any header. However, when they go forward to the Server on ISP through Vigor router, all of the packets are tagged with AF (configured in Bandwidth >>QoS>>Class) automatically.

Class Index #1

Name

Tag packets as:

| NO | Status | Local Address | Remote Address | DiffServ CodePoint | Service Type |
|----|--------|---------------|----------------|--------------------|--------------|
| 1 | Active | Any | Any | ANY | ANY |

4.9 Applications

Below shows the menu items for Applications.

4.9.1 Dynamic DNS

The ISP often provides you with a dynamic IP address when you connect to the Internet via your ISP. It means that the public IP address assigned to your router changes each time you access the Internet. The Dynamic DNS feature lets you assign a domain name to a dynamic WAN IP address. It allows the router to update its online WAN IP address mappings on the specified Dynamic DNS server. Once the router is online, you will be able to use the registered domain name to access the router or internal virtual servers from the Internet. It is particularly helpful if you host a web server, FTP server, or other server behind the router.

Before you use the Dynamic DNS feature, you have to apply for free DDNS service to the DDNS service providers. The router provides up to three accounts from three different DDNS service providers. Basically, Vigor routers are compatible with the DDNS services supplied by most popular DDNS service providers such as www.dyndns.org, www.no-ip.com, www.dtdns.com, www.changeip.com, www.dynamic-nameserver.com. You should visit their websites to register your own domain name for the router.

Enable the Function and Add a Dynamic DNS Account

1. Assume you have a registered domain name from the DDNS provider, say *hostname.dyndns.org*, and an account with username: *test* and password: *test*.
2. In the DDNS setup menu, check **Enable Dynamic DNS Setup**.

Applications >> Dynamic DNS Setup

Auto-Update interval Min(s) (1~14400)

Accounts:

| Index | WAN Interface | Domain Name | Active |
|--------------------|---------------|-------------|--------|
| 1. | WAN1 First | . | x |
| 2. | WAN1 First | . | x |
| 3. | WAN1 First | . | x |

[OK](#) [Clear All](#)

Available settings are explained as follows:

| Item | Description |
|-------------------------------|---|
| Set to Factory Default | Clear all profiles and recover to factory settings. |

| Item | Description |
|---------------------------------|---|
| Enable Dynamic DNS Setup | Check this box to enable DDNS function. |
| Auto-Update interval | Set the time for the router to perform auto update for DDNS service. |
| View Log | Display DDNS log status. |
| Force Update | Force the router updates its information to DDNS server. |
| Index | Click the number below Index to access into the setting page of DDNS setup to set account(s). |
| WAN Interface | Display the WAN interface used. |
| Domain Name | Display the domain name that you set on the setting page of DDNS setup. |
| Active | Display if this account is active or inactive. |

3. Select Index number 1 to add an account for the router. Check **Enable Dynamic DNS Account**, and choose correct Service Provider: dyndns.org, type the registered hostname: *hostname* and domain name suffix: dyndns.org in the **Domain Name** block. The following two blocks should be typed your account Login Name: *test* and Password: *test*.

[Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup](#)

Index : 1

Enable Dynamic DNS Account

WAN Interface:

Service Provider:

Service Type:

Domain Name: .

Login Name: (max. 64 characters)

Password: (max. 23 characters)

Wildcards

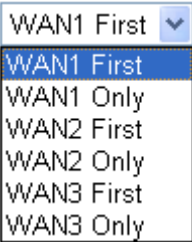

Backup MX

Mail Extender:

Determine Real WAN IP:

Available settings are explained as follows:

| Item | Description |
|-----------------------------------|---|
| Enable Dynamic DNS Account | Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2). |
| WAN Interface | <p>WAN1/WAN2/WAN3 First - While connecting, the router will use WAN1/WAN2/WAN3 as the first channel for such account. If WAN1/WAN2/WAN3 fails, the router will use another WAN interface instead.</p> <p>WAN1/WAN2/WAN3 Only - While connecting, the router will use WAN1/WAN2/WAN3 as the only channel</p> |

| Item | Description |
|-------------------------------|--|
| | for such account.  |
| Service Provider | Select the service provider for the DDNS account. |
| Service Type | Select a service type (Dynamic, Custom or Static). If you choose Custom, you can modify the domain that is chosen in the Domain Name field. |
| Domain Name | Type in one domain name that you applied previously. Use the drop down list to choose the desired domain. |
| Login Name | Type in the login name that you set for applying domain. |
| Password | Type in the password that you set for applying domain. |
| Wildcard and Backup MX | The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites. |
| Mail Extender | If the mail server is defined with another name, please type the name in this area. Such mail server will be used as backup mail exchange. |
| Determine Real WAN IP | If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP. When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update. There are two methods offered for you to choose: WAN IP - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away. Internet IP – If it is selected and the WAN IP of Vigor router is private, it will be converted to public IP before DDNS update takes place. |

- Click **OK** button to activate the settings. You will see your setting has been saved.

Disable the Function and Clear all Dynamic DNS Accounts

In the DDNS setup menu, uncheck **Enable Dynamic DNS Setup**, and push **Clear All** button to disable the function and clear all accounts from the router.

Delete a Dynamic DNS Account

In the DDNS setup menu, click the **Index** number you want to delete and then push **Clear All** button to delete the account.

4.9.2 Schedule

The Vigor router has a built-in real time clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

You have to set your time before set schedule. In **System Maintenance>> Time and Date** menu, press **Inquire Time** button to set the Vigor router's clock to current time of your PC. The clock will reset once if you power down or reset the router. There is another way to set up time. You can inquiry an NTP server (a time server) on the Internet to synchronize the router's clock. This method can only be applied when the WAN connection has been built up.

[Applications >> Schedule](#)

| Schedule: | | Set to Factory Default | |
|--------------------|--------|--|--------|
| Index | Status | Index | Status |
| 1. | x | 9. | x |
| 2. | x | 10. | x |
| 3. | x | 11. | x |
| 4. | x | 12. | x |
| 5. | x | 13. | x |
| 6. | x | 14. | x |
| 7. | x | 15. | x |
| 8. | x | | |

Status: v --- Active, x --- Inactive

Each item is explained as follows:

| Item | Description |
|-------------------------------|---|
| Set to Factory Default | Clear all profiles and recover to factory settings. |
| Index | Click the number below Index to access into the setting page of schedule. |
| Status | Display if this schedule setting is active or inactive. |

You can set up to 15 schedules. Then you can apply them to your **Internet Access** or **VPN and Remote Access >> LAN-to-LAN** settings.

To add a schedule:

1. Click any index, for example Index No.1.

[Applications >> Schedule](#)

| Schedule: | | Set to Factory Default | |
|--------------------|--------|--|--------|
| Index | Status | Index | Status |
| 1. | x | 9. | x |
| 2. | x | 10. | x |
| 3. | x | 11. | x |
| 4. | x | 12. | x |
| 5. | x | 13. | x |
| 6. | x | 14. | x |
| 7. | x | 15. | x |
| 8. | x | | |

Status: v --- Active, x --- Inactive

- The detailed settings of the call schedule with index 1 are shown below.

Applications >> Schedule

Index No. 1

Enable Schedule Setup

Start Date (yyyy-mm-dd) 2000 1 1

Start Time (hh:mm) 0 : 0

Duration Time (hh:mm) 0 : 0

Action Force On

Idle Timeout 0 minute(s).(max. 255, 0 for default)

How Often

Once

Weekdays

Sun Mon Tue Wed Thu Fri Sat

OK Clear Cancel

Available settings are explained as follows:

| Item | Description |
|--------------------------------|--|
| Enable Schedule Setup | Check to enable the schedule. |
| Start Date (yyyy-mm-dd) | Specify the starting date of the schedule. |
| Start Time (hh:mm) | Specify the starting time of the schedule. |
| Duration Time (hh:mm) | Specify the duration (or period) for the schedule. |
| Action | Specify which action Call Schedule should apply during the period of the schedule. Force On -Force the connection to be always on. Force Down -Force the connection to be always down. Enable Dial-On-Demand -Specify the connection to be dial-on-demand and the value of idle timeout should be specified in Idle Timeout field. Disable Dial-On-Demand -Specify the connection to be up when it has traffic on the line. Once there is no traffic over idle timeout, the connection will be down and never up again during the schedule. |
| Idle Timeout | Specify the duration (or period) for the schedule. How often -Specify how often the schedule will be applied Once -The schedule will be applied just once Weekdays -Specify which days in one week should perform the schedule. |

- Click **OK** to save the settings.

Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

1. Make sure the PPPoE connection and **Time Setup** is working properly.
2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
3. Configure the **Force Down** from 18:00 to next day 9:00 for whole week.
4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform **Force On** or **Force Down** action according to the time plan that has been pre-defined in the schedule profiles.

4.9.3 RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Applications >> RADIUS

RADIUS Setup

Enable

Server IP Address

Destination Port

Shared Secret

Confirm Shared Secret

OK Clear Cancel

Available settings are explained as follows:

| Item | Description |
|--------------------------|--|
| Enable | Check to enable RADIUS client feature. |
| Server IP Address | Enter the IP address of RADIUS server |
| Destination Port | The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138. |
| Shared Secret | The RADIUS server and client share a secret that is used to |

| Item | Description |
|------------------------------|---|
| | authenticate the messages sent between them. Both sides must be configured to use the same shared secret. |
| Confirm Shared Secret | Re-type the Shared Secret for confirmation. |

After finished the above settings, click **OK** button to save the settings.

4.9.4 UPnP

The **UPnP** (Universal Plug and Play) protocol is supported to bring to network connected devices the ease of installation and configuration which is already available for directly connected PC peripherals with the existing Windows 'Plug and Play' system. For NAT routers, the major feature of UPnP on the router is "NAT Traversal". This enables applications inside the firewall to automatically open the ports that they need to pass through a router. It is more reliable than requiring a router to work out by itself which ports need to be opened. Further, the user does not have to manually set up port mappings or a DMZ. **UPnP is available on Windows XP** and the router provide the associated support for MSN Messenger to allow full use of the voice, video and messaging features.

Applications >> UPnP

UPnP

Enable UPnP Service

Enable Connection control Service

Enable Connection Status Service

Default WAN ▼

Default WAN

WAN1

WAN2

WAN3

Note: If you intend running UPnP service inside your LAN, you should check the appropriate service above to allow control, as well as the appropriate UPnP settings.

Available settings are explained as follows:

| Item | Description |
|----------------------------|--|
| Enable UPNP Service | Accordingly, you can enable either the Connection Control Service or Connection Status Service . |
| Default WAN | It is used to specify the WAN interface for applying such function. |

After setting **Enable UPNP Service** setting, an icon of **IP Broadband Connection on Router** on Windows XP/Network Connections will appear. The connection status and control status will be able to be activated. The NAT Traversal of UPnP enables the multimedia features of your applications to operate. This has to manually set up port mappings or use other similar methods. The screenshots below show examples of this facility.

The UPnP facility on the router enables UPnP aware applications such as MSN Messenger to discover what are behind a NAT router. The application will also learn the external IP address and configure port mappings on the router. Subsequently, such a facility forwards packets from the external ports of the router to the internal ports used by the application.

The reminder as regards concern about Firewall and UPnP

Can't work with Firewall Software
 Enabling firewall applications on your PC may cause the UPnP function not working properly. This is because these applications will block the accessing ability of some network ports.

Security Considerations
 Activating the UPnP function on your network may incur some security threats. You should consider carefully these risks before activating the UPnP function.

- Some Microsoft operating systems have found out the UPnP weaknesses and hence you need to ensure that you have applied the latest service packs and patches.
- Non-privileged users can control some router functions, including removing and adding port mappings.

The UPnP function dynamically adds port mappings on behalf of some UPnP-aware applications. When the applications terminate abnormally, these mappings may not be removed.

4.9.5 IGMP

IGMP is the abbreviation of *Internet Group Management Protocol*. It is a communication protocol which is mainly used for managing the membership of Internet Protocol multicast groups.

Applications >> IGMP

IGMP

Enable IGMP Proxy WAN1 ▾
 IGMP Proxy is to act as a multicast proxy for hosts on the LAN side. Enable IGMP Proxy, if you will access any multicast group. But this function **take no affect when Bridge Mode is enabled**.

Enable IGMP Snooping
 Enable IGMP Snooping, multicast traffic is only forwarded to ports that have members of that group. Disable IGMP snooping, multicast traffic is treated in the same manner as broadcast traffic.

| [Refresh](#) |

| Working Multicast Groups | | | | | | |
|--------------------------|----------|----|----|----|----|--|
| Index | Group ID | P1 | P2 | P3 | P4 | |
| | | | | | | |

Available settings are explained as follows:

| Item | Description |
|-----------------------------|--|
| Enable IGMP Proxy | Check this box to enable this function. The application of multicast will be executed through WAN port. In addition, such function is available in NAT mode. |
| Enable IGMP Snooping | Check this box to enable this function. Multicast traffic will be forwarded to ports that have members of that group. Disabling IGMP snooping will make multicast traffic treated in the same manner as broadcast traffic. |
| Group ID | This field displays the ID port for the multicast group. The available range for IGMP starts from 224.0.0.0 to 239.255.255.254. |
| P1 to P4 | It indicates the LAN port used for the multicast group. |
| Refresh | Click this link to renew the working multicast group status. |

After finishing all the settings here, please click **OK** to save the configuration.

4.9.6 Wake on LAN

A PC client on LAN can be woken up by the router it connects. When a user wants to wake up a specified PC through the router, he/she must type correct MAC address of the specified PC on this web page of **Wake on LAN** of this router.

In addition, such PC must have installed a network card supporting WOL function. By the way, WOL function must be set as “Enable” on the BIOS setting.

[Application >> Wake on LAN](#)

Wake on LAN

Note: Wake on LAN cooperate with [Bind IP to MAC](#) function, only binded PCs can wake up through IP.

Wake by:

IP Address:

MAC Address:

Result

Available settings are explained as follows:

| Item | Description |
|--------------------|---|
| Wake by | Two types provide for you to wake up the bound IP. If you choose Wake by MAC Address, you have to type the correct MAC address of the host in MAC Address boxes. If you choose Wake by IP Address, you have to choose the correct IP address. |
| | <p>Wake by: <input type="text" value="MAC Address"/></p> <div style="border: 1px solid #ccc; padding: 2px;"> <input type="text" value="MAC Address"/> <input type="text" value="IP Address"/> </div> |
| IP Address | The IP addresses that have been configured in Firewall>>Bind IP to MAC will be shown in this drop down list. Choose the IP address from the drop down list that you want to wake up. |
| MAC Address | Type any one of the MAC address of the bound PCs. |
| Wake Up | Click this button to wake up the selected IP. See the following figure. The result will be shown on the box. |

[Application >> Wake on LAN](#)

Wake on LAN

Note: Wake on LAN cooperate with [Bind IP to MAC](#) function, only binded PCs can wake up through IP.

Wake by:

IP Address:

MAC Address:

Result

Send command to client done.

4.9.7 SMS/Mail Alert Service

The function of Short Message Service is that Vigor router sends a message to user's mobile through specified service provider to assist the user knowing the real-time abnormal situations.

Vigor router allows you to set up to 8 SMS profiles which will be sent out according to different conditions.

SMS Provider

This page allows you to specify SMS provider, who will get the SMS, what the content is and when the SMS will be sent.

Application >> SMS / Mail Alert Service

| SMS Provider | | Mail Server | | Set to Factory Default | |
|---------------------------------------|----------------|-------------|----------------|------------------------|--|
| Index | SMS Provider | Recipient | Notify Profile | Schedule(1-15) | |
| 1 <input checked="" type="checkbox"/> | 1 - Line_down | | 1 - ??? | | |
| 2 <input checked="" type="checkbox"/> | 1 - Line_down | | 1 - ??? | | |
| 3 <input type="checkbox"/> | 1 - Line_down | | 1 - ??? | | |
| 4 <input type="checkbox"/> | 2 - ??? | | 1 - ??? | | |
| 5 <input type="checkbox"/> | 3 - ??? | | 1 - ??? | | |
| 6 <input type="checkbox"/> | 4 - ??? | | 1 - ??? | | |
| 7 <input type="checkbox"/> | 5 - ??? | | 1 - ??? | | |
| 8 <input type="checkbox"/> | 6 - ??? | | 1 - ??? | | |
| 9 <input type="checkbox"/> | 7 - ??? | | 1 - ??? | | |
| 10 <input type="checkbox"/> | 8 - ??? | | 1 - ??? | | |
| | 9 - Custome 1 | | 1 - ??? | | |
| | 10 - Custome 2 | | 1 - ??? | | |
| | 1 - Line_down | | 1 - ??? | | |
| | 1 - Line_down | | 1 - ??? | | |
| | 1 - Line_down | | 1 - ??? | | |

Available settings are explained as follows:

| Item | Description |
|-------------------------------|---|
| Set to Factory Default | Clear all profiles and recover to factory settings. |
| Index | Check the box to enable such profile. |
| SMS Provider | Use the drop down list to choose SMS service provider. You can click SMS Provider link to define the SMS server. |
| Recipient | Type the name of the one who will receive the SMS. |
| Notify | Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the Notify Profile link to define the content of the SMS. |
| Schedule | Type the schedule number that the SMS will be sent out. You can click the Schedule(1-15) link to define the schedule. |

After finishing all the settings here, please click **OK** to save the configuration.

Mail Server

This page allows you to specify Mail Server profile, who will get the notification e-mail, what the content is and when the message will be sent.

Application >> SMS / Mail Alert Service

| SMS Provider | | Mail Server | | | Set to Factory Default | |
|---------------------------------------|----------------------------|----------------------|----------------|----------------------|------------------------|--|
| Index | Mail Service | Recipient | Notify Profile | Schedule(1-15) | | |
| 1 <input checked="" type="checkbox"/> | 1 - Mail_Notify | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 2 <input checked="" type="checkbox"/> | 1 - Mail_Notify | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 3 <input type="checkbox"/> | 1 - Mail_Notify 2 - ??? | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 4 <input type="checkbox"/> | 3 - ??? 4 - ??? | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 5 <input type="checkbox"/> | 5 - ??? 6 - ??? | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 6 <input type="checkbox"/> | 7 - ??? 8 - ??? | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 7 <input type="checkbox"/> | 9 - ??? 10 - ??? | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 8 <input type="checkbox"/> | 1 - Mail_Notify | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 9 <input type="checkbox"/> | 1 - Mail_Notify | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |
| 10 <input type="checkbox"/> | 1 - Mail_Notify | <input type="text"/> | 1 - ??? | <input type="text"/> | <input type="text"/> | |

Available settings are explained as follows:

| Item | Description |
|-------------------------------|--|
| Set to Factory Default | Clear all profiles and recover to factory settings. |
| Index | Check the box to enable such profile. |
| Mail Service | Use the drop down list to choose mail service provider. You can click Mail Service link to define the mail server. |
| Recipient | Type the e-mail address of the one who will receive the notification message. |
| Notify Profile | Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the Notify Profile link to define the content of the mail message. |
| Schedule (1-15) | Type the schedule number that the notification will be sent out. You can click the Schedule(1-15) link to define the schedule. |

After finishing all the settings here, please click **OK** to save the configuration.

4.10 VPN and Remote Access

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

Below shows the menu items for VPN and Remote Access.

4.10.1 VPN Client Wizard

Such wizard is used to configure VPN settings for VPN client. Such wizard will guide to set the LAN-to-LAN profile for VPN dial out connection (from server to client) step by step.

1. Open **VPN and Remote Access>>VPN Client Wizard**. The following page will appear.

VPN and Remote Access >> VPN Client Wizard

Choose VPN Establishment Environment

LAN-to-LAN VPN Client Mode Selection:

Please choose a LAN-to-LAN Profile:

Note: For a typical LAN-to-LAN tunnel, please select Route Mode.
If the remote network is expecting only a single client or ip and is not configured to route the subnet and then select NAT mode.
If in doubt then select Route Mode

Available settings are explained as follows:

| Item | Description |
|---|---|
| LAN-to-LAN Client Mode Selection | Choose the client mode. Route Mode/NAT Mode – If the remote network only allows you to dial in with single IP, please choose this mode, otherwise please choose Route Mode. |

| Item | Description | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---------|----------|--------|---|---|-----|---|---|-----|---|---|-----|---|---|-----|---|---|-----|---|---|-----|---|---|-----|---|---|-----|---|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|----|---|-----|
| | <div style="border: 1px solid black; padding: 2px;"> Route Mode ▼ <div style="border: 1px solid black; padding: 2px; margin-top: 2px;"> Route Mode NAT Mode </div> </div> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Please choose a LAN-to-LAN Profile | <p>There are 32 VPN profiles for users to set.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>[Index]</th> <th>[Status]</th> <th>[Name]</th> </tr> </thead> <tbody> <tr><td>1</td><td>x</td><td>???</td></tr> <tr><td>2</td><td>x</td><td>???</td></tr> <tr style="background-color: #e0e0e0;"><td>3</td><td>x</td><td>???</td></tr> <tr><td>4</td><td>x</td><td>???</td></tr> <tr><td>5</td><td>x</td><td>???</td></tr> <tr><td>6</td><td>x</td><td>???</td></tr> <tr><td>7</td><td>x</td><td>???</td></tr> <tr><td>8</td><td>x</td><td>???</td></tr> <tr><td>9</td><td>x</td><td>???</td></tr> <tr><td>10</td><td>x</td><td>???</td></tr> <tr><td>11</td><td>x</td><td>???</td></tr> <tr><td>12</td><td>x</td><td>???</td></tr> <tr><td>13</td><td>x</td><td>???</td></tr> <tr><td>14</td><td>x</td><td>???</td></tr> <tr><td>15</td><td>x</td><td>???</td></tr> <tr><td>16</td><td>x</td><td>???</td></tr> <tr><td>17</td><td>x</td><td>???</td></tr> <tr><td>18</td><td>x</td><td>???</td></tr> <tr><td>19</td><td>x</td><td>???</td></tr> <tr><td>20</td><td>x</td><td>???</td></tr> <tr><td>21</td><td>x</td><td>???</td></tr> <tr><td>22</td><td>x</td><td>???</td></tr> <tr><td>23</td><td>x</td><td>???</td></tr> <tr><td>24</td><td>x</td><td>???</td></tr> <tr><td>25</td><td>x</td><td>???</td></tr> <tr><td>26</td><td>x</td><td>???</td></tr> <tr><td>27</td><td>x</td><td>???</td></tr> <tr><td>28</td><td>x</td><td>???</td></tr> <tr><td>29</td><td>x</td><td>???</td></tr> </tbody> </table> | [Index] | [Status] | [Name] | 1 | x | ??? | 2 | x | ??? | 3 | x | ??? | 4 | x | ??? | 5 | x | ??? | 6 | x | ??? | 7 | x | ??? | 8 | x | ??? | 9 | x | ??? | 10 | x | ??? | 11 | x | ??? | 12 | x | ??? | 13 | x | ??? | 14 | x | ??? | 15 | x | ??? | 16 | x | ??? | 17 | x | ??? | 18 | x | ??? | 19 | x | ??? | 20 | x | ??? | 21 | x | ??? | 22 | x | ??? | 23 | x | ??? | 24 | x | ??? | 25 | x | ??? | 26 | x | ??? | 27 | x | ??? | 28 | x | ??? | 29 | x | ??? |

Available settings are explained as follows:

| Item | Description |
|---------------------|---|
| Profile Name | Type a name for such profile. The length of the file is limited to 10 characters. |

| Item | Description |
|----------------------------------|---|
| VPN Dial-Out Through | <p>Use the drop down menu to choose a proper WAN interface for this profile. This setting is useful for dial-out only.</p>  <p>WAN1 First/ WAN2 First/ WAN3 First - While connecting, the router will use WAN1/WAN2/WAN3 as the first channel for VPN connection. If WAN1/WAN2/WAN3 fails, the router will use another WAN interface instead.</p> <p>WAN1 Only /WAN2 Only/WAN 3 Only- While connecting, the router will use WAN1/WAN2/WAN3 as the only channel for VPN connection.</p> <p>WAN1 Only: Backup WAN2/WAN2 Only: Backup WAN1 - While connecting, the router will use WAN1/WAN2 as the only channel for VPN connection. If WAN1/WAN2 fails, the router will use backup WAN2/backup WAN1 interface instead.</p> |
| Always On | <p>Check to enable router always keep VPN connection.</p> |
| Pre-Shared Key | <p>IKE Authentication Method usually applies to those are remote dial-in user or node (LAN to LAN) which uses dynamic IP address and IPSec-related VPN connections such as L2TP over IPSec and IPSec tunnel.</p> <p>Pre-Shared Key- Specify a key for IKE authentication.</p> <p>Confirm Pre-Shared Key-Confirm the pre-shared key.</p> |
| Digital Signature (X.509) | <p>Click Digital Signature to invoke this function. Use the drop down list to choose one of the certificates for using. You have to configure one certificate at least previously in Certificate Management >> Local Certificate. Otherwise, the setting you choose here will not be effective.</p> <p>Peer ID – Choose the peer ID selection from the drop down list.</p> <p>Local ID – Choose Alternative Subject Name First or Subject Name First.</p> |
| IPSec Security Method | <p>Medium - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p>High - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> |
| User Name | <p>This field is used to authenticate for connection when you select PPTP or L2TP with or without IPSec policy above.</p> |
| Password | <p>This field is used to authenticate for connection when you</p> |

| Item | Description |
|----------------------------|---|
| | select PPTP or L2TP with or without IPSec policy above. |
| Remote Network IP | Please type one LAN IP address (according to the real location of the remote host) for building VPN connection. |
| Remote Network Mask | Please type the network mask (according to the real location of the remote host) for building VPN connection. |

3. After finishing the configuration, please click **Next**. The confirmation page will be shown as follows. If there is no problem, you can click one of the radio buttons listed on the page and click **Finish** to execute the next action.

VPN and Remote Access >> VPN Client Wizard

Please confirm your settings

| | |
|----------------------------|---------------------------|
| LAN-to-LAN Index: | 3 |
| Profile Name: | VPN-1 |
| VPN Connection Type: | L2TP over IPSec (Must) |
| VPN Connection Through: | WAN1 First |
| Always on: | No |
| Server IP/Host Name: | draytek.com |
| IKE Authentication Method: | Digital Signature (X.509) |
| IPSec Security Method: | AH-SHA1 |
| Remote Network IP: | 192.168.1.6 |
| Remote Network Mask: | 255.255.255.0 |

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and proceed to the following action:

- Go to the VPN Connection Management.
- Do another VPN Client Wizard setup.
- View more detailed configurations.

Available settings are explained as follows:

| Item | Description |
|--|--|
| Go to the VPN Connection Management | Click this radio button to access VPN and Remote Access>>Connection Management for viewing VPN Connection status. |
| Do another VPN Server Wizard Setup | Click this radio button to set another profile of VPN Server through VPN Server Wizard. |
| View more detailed configuration | Click this radio button to access VPN and Remote Access>>LAN to LAN for viewing detailed configuration. |

4.10.2 VPN Server Wizard

Such wizard is used to configure VPN settings for VPN server. Such wizard will guide to set the LAN-to-LAN profile for VPN dial in connection (from client to server) step by step.

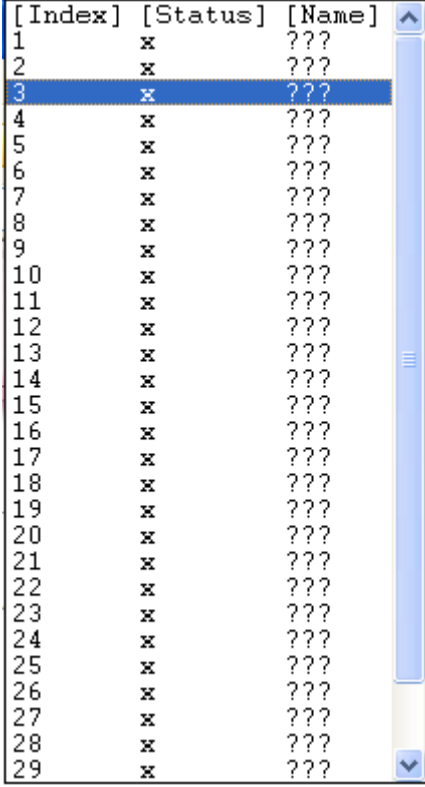

VPN and Remote Access >> VPN Server Wizard

Choose VPN Establishment Environment

| | |
|--|--|
| VPN Server Mode Selection: | Site to Site VPN (LAN-to-LAN) ▾ |
| Please choose a LAN-to-LAN Profile: | [Index] [Status] [Name] ▾ |
| Please choose a Dial-in User Accounts: | [Index] [Status] [Name] ▾ |
| Allowed Dial-in Type: | <input type="checkbox"/> PPTP <input type="checkbox"/> IPSec <input type="checkbox"/> L2TP with IPSec Policy None ▾ |

Available settings are explained as follows:

| Item | Description |
|---|---|
| VPN Server Mode Selection | <p>Choose the direction for the VPN server.</p> <p>Site to Site VPN – To set a LAN-to-LAN profile automatically, please choose Site to Site VPN.</p> <p>Remote Dial-in User – You can manage remote access by maintaining a table of remote user profile, so that users can be authenticated to dial-in via VPN connection.</p> <div style="border: 1px solid #000; padding: 2px;"> <p>Site to Site VPN (LAN-to-LAN) ▾</p> <p style="background-color: #000080; color: #ffffff;">Site to Site VPN (LAN-to-LAN)</p> <p>Remote Dial-in User (Teleworker)</p> </div> |
| Please choose a LAN-to-LAN Profile | <p>This item is available when you choose Site to Site VPN (LAN-to-LAN) as VPN server mode. There are 32 VPN profiles for users to set.</p> |

| Remote Network Mask | 255.255.255.0 |

Available settings are explained as follows:

| Item | Description |
|----------------------------------|---|
| Profile Name | Type a name for such profile. The length of the file is limited to 10 characters. |
| User Name | This field is used to authenticate for connection when you select PPTP or L2TP with or without IPSec policy above. |
| Password | This field is used to authenticate for connection when you select PPTP or L2TP with or without IPSec policy above. |
| Pre-Shared Key | For IPSec/L2TP IPSec authentication, you have to type a pre-shared key. |
| Confirm Pre-Shared Key | Type the pre-shared key again for confirmation. |
| Digital Signature (X.509) | Check the box of Digital Signature to invoke this function. Use the drop down list to choose one of the certificates for using. You have to configure one certificate at least previously in Certificate Management >> Local Certificate. Otherwise, the setting you choose here will not be effective. |
| Peer IP/VPN Client IP | Type the WAN IP address or VPN client IP address for the remote client. |
| Peer ID | Type the ID name for the remote client. |
| Remote Network IP | Please type one LAN IP address (according to the real location of the remote host) for building VPN connection. |
| Remote Network Mask | Please type the network mask (according to the real location of the remote host) for building VPN connection. |

- After finishing the configuration, please click **Next**. The confirmation page will be shown as follows.

VPN and Remote Access >> VPN Server Wizard

Please Confirm Your Settings

| | |
|------------------------|-------------------------------|
| VPN Environment: | Site to Site VPN (LAN-to-LAN) |
| Index: | 3 |
| Profile Name: | VPN-Ser1 |
| Username: | server1 |
| Allowed Service: | PPTP+IPSec |
| Peer IP/VPN Client IP: | |
| Peer ID: | |
| Remote Network IP: | 0.0.0.0 |
| Remote Network Mask: | 255.255.255.0 |

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and proceed to the following action:

- Go to the VPN Connection Management.
- Do another VPN Server Wizard setup.
- View more detailed configurations.

Available settings are explained as follows:

| Item | Description |
|--|--|
| Go to the VPN Connection Management | Click this radio button to access VPN and Remote Access>>Connection Management for viewing VPN Connection status. |
| Do another VPN Server Wizard Setup | Click this radio button to set another profile of VPN Server through VPN Server Wizard. |
| View more detailed configuration | Click this radio button to access VPN and Remote Access>>LAN to LAN for viewing detailed configuration. |

- If there is no problem, you can click one of the radio buttons listed on the page and click **Finish** to execute the next action.

4.10.3 Remote Access Control

Enable the necessary VPN service as you need. If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port.

VPN and Remote Access >> Remote Access Control Setup

Remote Access Control Setup

| | |
|-------------------------------------|--------------------------|
| <input checked="" type="checkbox"/> | Enable PPTP VPN Service |
| <input checked="" type="checkbox"/> | Enable IPSec VPN Service |
| <input checked="" type="checkbox"/> | Enable L2TP VPN Service |

Note: If you intend running a VPN server inside your LAN, you should uncheck the appropriate protocol above to allow pass-through, as well as the appropriate NAT settings.

After finishing all the settings here, please click **OK** to save the configuration.

4.10.4 PPP General Setup

This submenu only applies to PPP-related VPN connections, such as PPTP, L2TP, L2TP over IPSec.

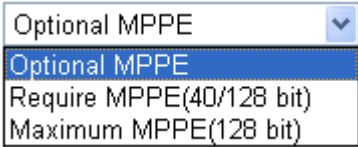

VPN and Remote Access >> PPP General Setup

PPP General Setup

| | |
|---|---|
| PPP/MP Protocol | |
| Dial-In PPP Authentication | <input type="text" value="PAP or CHAP"/> |
| Dial-In PPP Encryption (MPPE) | <input type="text" value="Optional MPPE"/> |
| Mutual Authentication (PAP) | <input type="radio"/> Yes <input checked="" type="radio"/> No |
| Username | <input type="text"/> |
| Password | <input type="text"/> |
| IP Address Assignment for Dial-In Users (When DHCP Disable set) | |
| Assigned IP start | LAN 1 <input type="text" value="192.168.1.200"/> |
| | LAN 2 <input type="text" value="192.168.2.200"/> |
| | LAN 3 <input type="text" value="192.168.3.200"/> |
| | LAN 4 <input type="text" value="192.168.4.200"/> |

Available settings are explained as follows:

| Item | Description |
|-----------------------------------|---|
| Dial-In PPP Authentication | <p>PAP Only - elect this option to force the router to authenticate dial-in users with the PAP protocol.</p> <p>PAP or CHAP - Selecting this option means the router will attempt to authenticate dial-in users with the CHAP protocol first. If the dial-in user does not support this protocol, it will fall back to use the PAP protocol for authentication.</p> |

| Item | Description |
|--|---|
| Dial-In PPP Encryption (MPPE Optional MPPE) | <p>Optional MPPE - This option represents that the MPPE encryption method will be optionally employed in the router for the remote dial-in user. If the remote dial-in user does not support the MPPE encryption algorithm, the router will transmit “no MPPE encrypted packets”. Otherwise, the MPPE encryption scheme will be used to encrypt the data.</p>  <p>Require MPPE (40/128bits) - Selecting this option will force the router to encrypt packets by using the MPPE encryption algorithm. In addition, the remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data.</p> <p>Maximum MPPE - This option indicates that the router will use the MPPE encryption scheme with maximum bits (128-bit) to encrypt the data.</p> |
| Mutual Authentication (PAP) | <p>The Mutual Authentication function is mainly used to communicate with other routers or clients who need bi-directional authentication in order to provide stronger security, for example, Cisco routers. So you should enable this function when your peer router requires mutual authentication. You should further specify the User Name and Password of the mutual authentication peer.</p> |
| Assigned IP Start | <p>Enter a start IP address for the dial-in PPP connection. You should choose an IP address from the local private network. For example, if the local private network is 192.168.1.0/255.255.255.0, you could choose 192.168.1.200 as the Start IP Address.</p> <p>You can configure up to four start IP addresses for LAN1 ~ LAN4.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

4.10.5 IPsec General Setup

In **IPsec General Setup**, there are two major parts of configuration.

There are two phases of IPsec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPsec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPSec, **Transport** and **Tunnel**. The **Transport** mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPSec. The **Tunnel** mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

Authentication Header (AH) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

Encapsulating Security Payload (ESP) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

VPN and Remote Access >> IPSec General Setup

VPN IKE/IPSec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

IKE Authentication Method

Pre-Shared Key

Confirm Pre-Shared Key

IPSec Security Method

Medium (AH)
Data will be authentic, but will not be encrypted.

High (ESP) DES 3DES AES
Data will be encrypted and authentic.

Available settings are explained as follows:

| Item | Description |
|----------------------------------|---|
| IKE Authentication Method | <p>This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPSec-related VPN connections such as L2TP over IPSec and IPSec tunnel.</p> <p>Pre-Shared Key -Currently only support Pre-Shared Key authentication.</p> <p>Pre-Shared Key- Specify a key for IKE authentication</p> <p>Confirm Pre-Shared Key- Retype the characters to confirm the pre-shared key.</p> |
| IPSec Security Method | <p>Medium - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p>High (ESP) - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

4.10.6 IPsec Peer Identity

To use digital certificate for peer authentication in either LAN-to-LAN connection or Remote User Dial-In connection, here you may edit a table of peer certificate for selection. As shown below, the router provides **32** entries of digital certificates for peer dial-in users.

VPN and Remote Access >> IPsec Peer Identity

X509 Peer ID Accounts: [Set to Factory Default](#)

| Index | Name | Status | Index | Name | Status |
|---------------------|------|--------|---------------------|------|--------|
| 1. | ??? | X | 17. | ??? | X |
| 2. | ??? | X | 18. | ??? | X |
| 3. | ??? | X | 19. | ??? | X |
| 4. | ??? | X | 20. | ??? | X |
| 5. | ??? | X | 21. | ??? | X |

| 14. | ??? | X | 30. | ??? | X |
| 15. | ??? | X | 31. | ??? | X |
| 16. | ??? | X | 32. | ??? | X |

Each item will be explained as follows:

| Item | Description |
|-------------------------------|--|
| Set to Factory Default | Click it to clear all indexes. |
| Index | Click the number below Index to access into the setting page of IPsec Peer Identity. |
| Name | Display the profile name of that index. |

Click each index to edit one peer digital certificate. There are three security levels of digital signature authentication: Fill each necessary field to authenticate the remote peer. The following explanation will guide you to fill all the necessary fields.

Profile Index : 1

Profile Name

Enable this account

Accept Any Peer ID

Accept Subject Alternative Name

Type

IP

Accept Subject Name

Country (C)

State (ST)

Location (L)

Organization (O)

Organization Unit (OU)

Common Name (CN)

Email (E)

Available settings are explained as follows:

| Item | Description |
|--|--|
| Profile Name | Type the name of the profile. |
| Accept Any Peer ID | Click to accept any peer regardless of its identity. |
| Accept Subject Alternative Name | Click to check one specific field of digital signature to accept the peer with matching value. The field can be IP Address , Domain , or E-mail Address . The box under the Type will appear according to the type you select and ask you to fill in corresponding setting. |
| Accept Subject Name | Click to check the specific fields of digital signature to accept the peer with matching value. The field includes Country (C) , State (ST) , Location (L) , Organization (O) , Organization Unit (OU) , Common Name (CN) , and Email (E) . |

After finishing all the settings here, please click **OK** to save the configuration.

4.10.7 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profile, so that users can be authenticated to dial-in via VPN connection. You may set parameters including specified connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router provides 32 access accounts for dial-in users. Besides, you can extend the user accounts to the RADIUS server through the built-in RADIUS client function. The following figure shows the summary table.

VPN and Remote Access >> Remote Dial-in User

Remote Access User Accounts: | [Set to Factory Default](#) |

| Index | User | Active | Status | Index | User | Active | Status |
|---------------------|------|--------------------------|--------|---------------------|------|--------------------------|--------|
| 1. | ??? | <input type="checkbox"/> | --- | 17. | ??? | <input type="checkbox"/> | --- |
| 2. | ??? | <input type="checkbox"/> | --- | 18. | ??? | <input type="checkbox"/> | --- |
| 3. | ??? | <input type="checkbox"/> | --- | 19. | ??? | <input type="checkbox"/> | --- |
| 4. | ??? | <input type="checkbox"/> | --- | 20. | ??? | <input type="checkbox"/> | --- |
| 5. | ??? | <input type="checkbox"/> | --- | 21. | ??? | <input type="checkbox"/> | --- |
| 6. | ??? | <input type="checkbox"/> | --- | 22. | ??? | <input type="checkbox"/> | --- |
| 7. | ??? | <input type="checkbox"/> | --- | 23. | ??? | <input type="checkbox"/> | --- |
| 8. | ??? | <input type="checkbox"/> | --- | 24. | ??? | <input type="checkbox"/> | --- |
| 9. | ??? | <input type="checkbox"/> | --- | 25. | ??? | <input type="checkbox"/> | --- |
| 10. | ??? | <input type="checkbox"/> | --- | 26. | ??? | <input type="checkbox"/> | --- |
| 11. | ??? | <input type="checkbox"/> | --- | 27. | ??? | <input type="checkbox"/> | --- |
| 12. | ??? | <input type="checkbox"/> | --- | 28. | ??? | <input type="checkbox"/> | --- |
| 13. | ??? | <input type="checkbox"/> | --- | 29. | ??? | <input type="checkbox"/> | --- |
| 14. | ??? | <input type="checkbox"/> | --- | 30. | ??? | <input type="checkbox"/> | --- |
| 15. | ??? | <input type="checkbox"/> | --- | 31. | ??? | <input type="checkbox"/> | --- |
| 16. | ??? | <input type="checkbox"/> | --- | 32. | ??? | <input type="checkbox"/> | --- |

Each item will be explained as follows:

| Item | Description |
|-------------------------------|--|
| Set to Factory Default | Click to clear all indexes. |
| Index | Click the number below Index to access into the setting page of Remote Dial-in User. |
| User | Display the username for the specific dial-in user of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty. |
| Active | Check the box to enable the selected profile. |
| Status | Display the access state of the specific dial-in user. The symbol V and X represent the specific dial-in user to be active and inactive, respectively. |

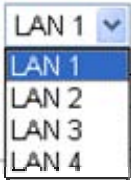

Click each index to edit one remote user profile. **Each Dial-In Type requires you to fill the different corresponding fields on the right.** If the fields gray out, it means you may leave it untouched. The following explanation will guide you to fill all the necessary fields.

Index No. 1

| | |
|---|---|
| <p>User account and Authentication</p> <p><input type="checkbox"/> Enable this account</p> <p>Idle Timeout <input type="text" value="300"/> second(s)</p> <hr/> <p>Allowed Dial-In Type</p> <p><input checked="" type="checkbox"/> PPTP</p> <p><input checked="" type="checkbox"/> IPSec Tunnel</p> <p><input checked="" type="checkbox"/> L2TP with IPSec Policy <input type="text" value="None"/></p> <p><input type="checkbox"/> Specify Remote Node</p> <p>Remote Client IP or Peer ISDN Number <input type="text"/></p> <p>or Peer ID <input type="text"/></p> <p>Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block</p> <p>Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block <i>(for some IGMP, IP-Camera, DHCP Relay..etc.)</i></p> <hr/> <p>Subnet</p> <p><input type="text" value="LAN 1"/></p> <p><input type="checkbox"/> Assign Static IP Address</p> <p><input type="text" value="0.0.0.0"/></p> | <p>Username <input style="width: 100px;" type="text" value="???"/></p> <p>Password <input style="width: 100px;" type="password"/></p> <p><input type="checkbox"/> Enable Mobile One-Time Passwords(mOTP)</p> <p>PIN Code <input style="width: 100px;" type="text"/></p> <p>Secret <input style="width: 100px;" type="text"/></p> <hr/> <p>IKE Authentication Method</p> <p><input checked="" type="checkbox"/> Pre-Shared Key</p> <p>IKE Pre-Shared Key <input style="width: 100px;" type="text"/></p> <p><input type="checkbox"/> Digital Signature(X.509)</p> <p><input type="text" value="None"/></p> <hr/> <p>IPSec Security Method</p> <p><input checked="" type="checkbox"/> Medium(AH)</p> <p>High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES</p> <p>Local ID (optional) <input style="width: 100px;" type="text"/></p> |
|---|---|

Available settings are explained as follows:

| Item | Description |
|--|---|
| User account and Authentication | <p>Enable this account - Check the box to enable this function.</p> <p>Idle Timeout- If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds.</p> |
| Allowed Dial-In Type | <p>PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</p> <p>IPSec Tunnel - Allow the remote dial-in user to make an IPSec VPN connection through Internet.</p> <p>L2TP with IPSec Policy - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPSec. Select from below:</p> <ul style="list-style-type: none"> ● None - Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection. ● Nice to Have - Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection. ● Must -Specify the IPSec policy to be definitely applied on the L2TP connection. |

| Item | Description |
|--|---|
| | <p>Specify Remote Node - Check the checkbox to specify the IP address of the remote dial-in user, ISDN number or peer ID (used in IKE aggressive mode). If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.</p> <p>Netbios Naming Packet</p> <ul style="list-style-type: none"> ● Pass – Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. <p>Multicast via VPN - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> ● Pass – Click this button to let multicast packets pass through the router. ● Block – This is default setting. Click this button to let multicast packets be blocked by the router. |
| Subnet | <p>Vigor2920 offers multiple subnets (in default, LAN1 to LAN4) for different purposes. Simply use the drop down list to specify which subnet will be applied by this profile.</p> <p style="text-align: center;">Subnet</p>  <p>Assign Static IP Address – If you want to specify an IP address as the subnet for this profile. Check this box to enable it and type an IP address in this field.</p> |
| User Name | This field is applicable when you select PPTP or L2TP with or without IPSec policy above. |
| Password | This field is applicable when you select PPTP or L2TP with or without IPSec policy above. |
| Enable Mobile One-Time Passwords (mOTP) | <p>Check this box to make the authentication with mOTP function.</p> <p>PIN Code – Type the code for authentication (e.g, 1234).</p> <p>Secret – Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).</p> |
| IKE Authentication Method | This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node. |

| Item | Description |
|------------------------------|---|
| | <p>Pre-Shared Key - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</p> <p>Digital Signature (X.509) – Check the box of Digital Signature to invoke this function and Select one predefined Profiles set in the VPN and Remote Access >>IPSec Peer Identity.</p> |
| IPSec Security Method | <p>This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node. Check the Medium, DES, 3DES or AES box as the security method.</p> <p>Medium-Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p>High-Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> <p>Local ID - Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p> |

After finishing all the settings here, please click **OK** to save the configuration.

4.10.8 LAN to LAN

Here you can manage LAN-to-LAN connections by maintaining a table of connection profiles. You may set parameters including specified connection direction (dial-in or dial-out), connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router supports up to 32 VPN tunnels simultaneously. The following figure shows the summary table.

VPN and Remote Access >> LAN to LAN

[XXXXXX:This Dial-out profile has already joined for VPN Backup Mechanism]
 [XXXXXX:This Dial-out profile does not join for VPN TRUNK]

The following shows profiles joined into VPN Backup mechanism.

VPN and Remote Access >> LAN to LAN

LAN-to-LAN Profiles:

View: All Trunk

| Name | Activate | Members | Status |
|------|----------|---------|--------|
|------|----------|---------|--------|

[XXXXXX:This Dial-out profile has already joined for VPN Backup Mechanism]

Each item will be explained as follows:

| Item | Description |
|-------------------------------|---|
| Set to Factory Default | Click to clear all indexes. |
| View | All – Click it to show all of profiles. Trunk - Click it to show the profile which VPN tunnel is up. |
| Name | Indicate the name of the LAN-to-LAN profile. The symbol ??? |

| Item | Description |
|---------------|---|
| | represents that the profile is empty. |
| Active | Check the box to enable the selected profile. |
| Status | Indicate the status of individual profiles. The symbol V and X represent the profile to be active and inactive, respectively. |

To edit each profile:

1. Click each index to edit each profile and you will get the following page. Each LAN-to-LAN profile includes 4 subgroups. If the fields gray out, it means you may leave it untouched. The following explanations will guide you to fill all the necessary fields.

For the web page is too long, we divide the page into several sections for explanation.

VPN and Remote Access >> LAN to LAN

Profile Index : 1

1. Common Settings

| | |
|---|---|
| Profile Name <input type="text" value="???"/> <input type="checkbox"/> Enable this profile | Call Direction <input checked="" type="radio"/> Both <input type="radio"/> Dial-Out <input type="radio"/> Dial-in <input type="checkbox"/> Always on Idle Timeout <input type="text" value="300"/> second(s) <input type="checkbox"/> Enable PING to keep alive PING to the IP <input type="text"/> |
| VPN Dial-Out Through <input type="text" value="WAN1 First"/> Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block <small>(for some IGMP,IP-Camera,DHCP Relay..etc.)</small> | |

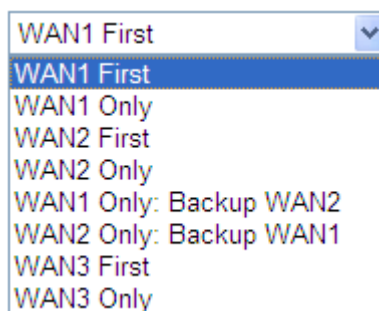

2. Dial-Out Settings

| | |
|---|--|
| Type of Server I am calling <input checked="" type="radio"/> PPTP <input type="radio"/> IPsec Tunnel <input type="radio"/> L2TP with IPsec Policy <input type="text" value="None"/> | Username <input type="text" value="???"/> Password <input type="text"/> PPP Authentication <input type="text" value="PAP/CHAP"/> VJ Compression <input checked="" type="radio"/> On <input type="radio"/> Off |
| Server IP/Host Name for VPN. <small>(such as 5551234, draytek.com or 123.45.67.89)</small> <input type="text"/> | IKE Authentication Method <input checked="" type="radio"/> Pre-Shared Key IKE Pre-Shared Key <input type="text"/> <input type="radio"/> Digital Signature(X.509) <input type="text" value="None"/> |
| | IPsec Security Method <input checked="" type="radio"/> Medium(AH) <input type="radio"/> High(ESP) <input type="text" value="DES without Authentication"/> <input type="button" value="Advanced"/> |
| | Index(1-15) in Schedule Setup: <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/> |

Available settings are explained as follows:

| Item | Description |
|------------------------|--|
| Common Settings | Profile Name – Specify a name for the profile of the LAN-to-LAN connection. Enable this profile - Check here to activate this profile. VPN Dial-Out Through - Use the drop down menu to |

choose a proper WAN interface for this profile. This setting is useful for dial-out only.

- **WAN1 First/ WAN2 First/ WAN3 First** - While connecting, the router will use WAN1/WAN2/WAN3 as the first channel for VPN connection. If WAN1/WAN2/WAN3 fails, the router will use another WAN interface instead.
- **WAN1 Only /WAN2 Only/WAN 3 Only**- While connecting, the router will use WAN1/WAN2/WAN3 as the only channel for VPN connection.
- **WAN1 Only: Backup WAN2/WAN2 Only: Backup WAN1** - While connecting, the router will use WAN1/WAN2 as the only channel for VPN connection. If WAN1/WAN2 fails, the router will use backup WAN2/backup WAN1 interface instead.

Netbios Naming Packet

- **Pass** – click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.
- **Block** – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.

Multicast via VPN - Some programs might send multicast packets via VPN connection.

- **Pass** – Click this button to let multicast packets pass through the router.
- **Block** – This is default setting. Click this button to let multicast packets be blocked by the router.

Call Direction - Specify the allowed call direction of this LAN-to-LAN profile.

- **Both**:-initiator/responder
- **Dial-Out**- initiator only
- **Dial-In**- responder only.

Always On-Check to enable router always keep VPN connection.

Idle Timeout: The default value is 300 seconds. If the connection has been idled over the value, the router will drop the connection.

Enable PING to keep alive - This function is to help the router to determine the status of IPSec VPN connection,

| | |
|---------------------------------|---|
| | <p>especially useful in the case of abnormal VPN IPsec tunnel disruption. For details, please refer to the note below. Check to enable the transmission of PING packets to a specified IP address.</p> <p>Enable PING to keep alive is used to handle abnormal IPsec VPN connection disruption. It will help to provide the state of a VPN connection for router's judgment of redial. Normally, if any one of VPN peers wants to disconnect the connection, it should follow a serial of packet exchange procedure to inform each other. However, if the remote peer disconnect without notice, Vigor router will by no where to know this situation. To resolve this dilemma, by continuously sending PING packets to the remote host, the Vigor router can know the true existence of this VPN connection and react accordingly. This is independent of DPD (dead peer detection).</p> <p>PING to the IP - Enter the IP address of the remote host that located at the other-end of the VPN tunnel.</p> |
| <p>Dial-Out Settings</p> | <p>Type of Server I am calling - PPTP - Build a PPTP VPN connection to the server through the Internet. You should set the identity like User Name and Password below for the authentication of remote server.</p> <p>IPsec Tunnel - Build an IPsec VPN connection to the server through Internet.</p> <p>L2TP with IPsec Policy - Build a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:</p> <ul style="list-style-type: none"> ● None: Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection. ● Nice to Have: Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-out VPN connection becomes one pure L2TP connection. <p>Must: Specify the IPsec policy to be definitely applied on the L2TP connection.</p> <p>User Name - This field is applicable when you select, PPTP or L2TP with or without IPsec policy above. The maximum length for username is 49 characters.</p> <p>Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The maximum length for password is 15 characters.</p> <p>PPP Authentication - This field is applicable when you select, PPTP or L2TP with or without IPsec policy above. PAP/CHAP is the most common selection due to wild compatibility.</p> <p>VJ compression - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. VJ Compression is used for TCP/IP protocol header compression. Normally set to Yes to improve bandwidth utilization.</p> |

IKE Authentication Method - This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy.

- **Pre-Shared Key** - Input 1-63 characters as pre-shared key.
- **Digital Signature (X.509)** - Click Digital Signature to invoke this function and select one predefined Profiles set in the **VPN and Remote Access >>IPSec Peer Identity** as **Peer ID**.

Local ID – Specify which one will be inspected first.

- **Alternative Subject Name First** – The alternative subject name (configured in **Certificate Management>>Local Certificate**) will be inspected first.
- **Subject Name First** – The subject name (configured in **Certificate Management>>Local Certificate**) will be inspected first.

IPSec Security Method - This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy.

- **Medium AH (Authentication Header)** means data will be authenticated, but not be encrypted. By default, this option is active.
- **High (ESP-Encapsulating Security Payload)**- means payload (data) will be encrypted and authenticated. Select from below:
- **DES without Authentication** -Use DES encryption algorithm and not apply any authentication scheme.
- **DES with Authentication**-Use DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.
- **3DES without Authentication**-Use triple DES encryption algorithm and not apply any authentication scheme.
- **3DES with Authentication**-Use triple DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.
- **AES without Authentication**-Use AES encryption algorithm and not apply any authentication scheme.
- **AES with Authentication**-Use AES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.

Advanced - Specify mode, proposal and key life of each IKE phase, Gateway, etc.

The window of advance setup is shown as below:

IKE phase 1 mode -Select from **Main** mode and **Aggressive** mode. The ultimate outcome is to exchange security proposals to create a protected secure channel. **Main** mode is more secure than **Aggressive** mode since more exchanges are done in a secure channel to set up the IPSec session. However, the **Aggressive** mode is faster. The default value in Vigor router is Main mode.

- **IKE phase 1 proposal**-To propose the local available authentication schemes and encryption algorithms to the VPN peers, and get its feedback to find a match. Two combinations are available for Aggressive mode and nine for **Main** mode. We suggest you select the combination that covers the most schemes.
 - **IKE phase 2 proposal**-To propose the local available algorithms to the VPN peers, and get its feedback to find a match. Three combinations are available for both modes. We suggest you select the combination that covers the most algorithms.
 - **IKE phase 1 key lifetime**-For security reason, the lifetime of key should be defined. The default value is 28800 seconds. You may specify a value in between 900 and 86400 seconds.
 - **IKE phase 2 key lifetime**-For security reason, the lifetime of key should be defined. The default value is 3600 seconds. You may specify a value in between 600 and 86400 seconds.
 - **Perfect Forward Secret (PFS)**-The IKE Phase 1 key will be reused to avoid the computation complexity in phase 2. The default value is inactive this function.
- Local ID**-In **Aggressive** mode, Local ID is on behalf of the IP address while identity authenticating with remote VPN server. The length of the ID is limited to 47 characters.

3. Dial-In Settings

| | | |
|---|--|--|
| Allowed Dial-In Type <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> IPsec Tunnel <input checked="" type="checkbox"/> L2TP with IPsec Policy None | | Username <input type="text" value="???"/> Password <input type="password"/> VJ Compression <input checked="" type="radio"/> On <input type="radio"/> Off |

|---|---|

Available settings are explained as follows:

| Item | Description |
|-----------------------------|--|
| Allowed Dial-In Type | <p>Determine the dial-in connection with different types.</p> <p>PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</p> <p>IPsec Tunnel- Allow the remote dial-in user to trigger an IPsec VPN connection through Internet.</p> <p>L2TP with IPsec Policy - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:</p> <ul style="list-style-type: none"> ● None - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection. ● Nice to Have - Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection. ● Must - Specify the IPsec policy to be definitely applied on the L2TP connection. <p>Specify Remote VPN Gateway - You can specify the IP</p> |

| | |
|---------------------------------------|---|
| | <p>address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side. If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.</p> <p>User Name - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. The maximum length for both username is 11 characters.</p> <p>Password - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. The maximum length for both username is 11 characters.</p> <p>VJ Compression - VJ Compression is used for TCP/IP protocol header compression. This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p>IKE Authentication Method - This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node.</p> <p>Pre-Shared Key - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key. Digital Signature (X.509) –Check the box of Digital Signature to invoke this function and select one predefined Profiles set in the VPN and Remote Access >>IPSec Peer Identity.</p> <p>Local ID – Specify which one will be inspected first.</p> <ul style="list-style-type: none"> ● Alternative Subject Name First – The alternative subject name (configured in Certificate Management>>Local Certificate) will be inspected first. ● Subject Name First – The subject name (configured in Certificate Management>>Local Certificate) will be inspected first. <p>IPSec Security Method - This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node.</p> <p>Medium- Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p>High- Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> |
| <p>GRE over IPSec Settings</p> | <p>Enable IPSec Dial-Out function GRE over IPSec: Check this box to verify data and transmit data in encryption with GRE over IPSec packet after configuring IPSec Dial-Out setting. Both ends must match for each other by setting same</p> |

| | |
|---------------------------------------|---|
| | <p>virtual IP address for communication.</p> <p>Logical Traffic: Such technique comes from RFC2890. Define logical traffic for data transmission between both sides of VPN tunnel by using the characteristic of GRE. Even hacker can decipher IPsec encryption, he/she still cannot ask LAN site to do data transmission with any information. Such function can ensure the data transmitted on VPN tunnel is really sent out from both sides. This is an optional function. However, if one side wants to use it, the peer must enable it, too.</p> <p>My GRE IP: Type the virtual IP for router itself for verified by peer.</p> <p>Peer GRE IP: Type the virtual IP of peer host for verified by router.</p> |
| <p>TCP/IP Network Settings</p> | <p>My WAN IP - This field is only applicable when you select PPTP or L2TP with or without IPsec policy above. The default value is 0.0.0.0, which means the Vigor router will get a PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <p>Remote Gateway IP - This field is only applicable when you select PPTP or L2TP with or without IPsec policy above. The default value is 0.0.0.0, which means the Vigor router will get a remote Gateway PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <p>Remote Network IP/ Remote Network Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPsec, this is the destination clients IDs of phase 2 quick mode.</p> <p>Local Network IP / Local Network Mask - Add a static route to direct all traffic destined to Local Network IP Address/Local Network Mask through the VPN connection.</p> <p>More - Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.</p> |

RIP Direction - The option specifies the direction of RIP (Routing Information Protocol) packets. You can enable/disable one of direction here. Herein, we provide four options: TX/RX Both, TX Only, RX Only, and Disable.

From first subnet to remote network, you have to do - If the remote network only allows you to dial in with single IP, please choose **NAT**, otherwise choose **Route**.

Change default route to this VPN tunnel - Check this box to change the default route with this VPN tunnel. Note that this setting is available only for one WAN interface is enabled. It is not available when both WAN interfaces are enabled.

2. After finishing all the settings here, please click **OK** to save the configuration.

4.10.9 VPN TRUNK Management

VPN Backup Management is a backup mechanism to set multiple VPN tunnels for using as backup tunnel. It can assure the network connection would not be cut off due to network environment blocked by any reason.

Features of VPN TRUNK – VPN Backup Mechanism

- VPN TRUNK-VPN Backup mechanism can judge abnormal situation for the environment of VPN server and correct it to complete the backup of VPN Tunnel in real-time.
- VPN TRUNK-VPN Backup mechanism is compliant with all WAN modes (single/multi)
- Dial-out connection types contain IPSec, PPTP, L2TP, L2TP over IPSec and ISDN (depends on hardware specification)
- The web page is simple to understand and easy to configure
- Fully compliant with VPN Server LAN Sit Single/Multi Network
- Mail Alert support, please refer to **System Maintenance >> SysLog / Mail Alert** for detailed configuration
- Syslog support, please refer to **System Maintenance >> SysLog / Mail Alert** for detailed configuration
- Specific ERD (Environment Recovery Detection) mechanism which can be operated by using Telnet command

VPN Backup profile will be activated when initial connection of single VPN tunnel is off-line. Before setting VPN TRUNK backup profile, please configure at least two sets of LAN to LAN profiles (with fully configured dial-out settings) first, otherwise you will not have selections for grouping Member1 and Member2.

Available settings are explained as follows:

| Item | Description |
|-----------------------------------|--|
| <p>Backup Profile List</p> | <p>Set to Factory Default - Click to clear all VPN TRUNK-VPN Backup mechanism profile.</p> <p>No – The order of VPN TRUNK-VPN Backup mechanism profile.</p> <p>Status - “v” means such profile is enabled; “x” means such profile is disabled.</p> <p>Name - Display the name of VPN TRUNK-VPN Backup mechanism profile.</p> <p>Member1 - Display the dial-out profile selected from the Member1 drop down list below.</p> <p>Member2 - Display the dial-out profile selected from the Member2 drop down list below.</p> <p>Active - “Yes” means normal condition. ”No” means the state might be disabled or that profile currently is set with Dial-in mode (for call direction) in LAN-to-LAN.</p> <p>Type - Display the connection type for that profile, such as IPSec, PPTP, L2TP, L2TP over IPSec (NICE), L2TP over IPSec(MUST) and so on.</p> <p>Advanced – This button is only available when there is one profile (or more) created in this page.</p>  <p>Detailed information for this dialog, see later section - Advanced Backup.</p> |
| <p>General Setup</p> | <p>Status- After choosing one of the profile listed above, please click Enable to activate this profile. If you click Disable, the selected or current used VPN TRUNK-Backup/Load Balance mechanism profile will not have any effect for VPN tunnel.</p> <p>Profile Name- Type a name for VPN TRUNK profile. Each profile can group two VPN connections set in LAN-to-LAN. The saved VPN profiles in LAN-to-LAN will be shown on Member1 and Member2 fields.</p> <p>Member 1/Member2 - Display the selection for LAN-to-LAN dial-out profiles (configured in VPN and Remote Access >> LAN-to-LAN) for you to choose for grouping under certain VPN TRUNK-VPN Backup/Load Balance mechanism profile.</p> <ul style="list-style-type: none"> ● No - Index number of LAN-to-LAN dial-out profile. ● Name - Profile name of LAN-to-LAN dial-out profile. ● Connection Type - Connection type of LAN-to-LAN dial-out profile. |

| Item | Description |
|------|---|
| | <ul style="list-style-type: none"> ● VPN ServerIP (Private Network) - VPN Server IP of LAN-to-LAN dial-out profiles. <p>Active Mode - Display available mode for you to choose. Choose Backup for your router.</p> <p>Add - Add and save new profile to the backup profile list.</p> <p>Update - Click this button to save the changes to the Status (Enable or Disable), profile name, member1 or member2.</p> <p>Delete - Click this button to delete the selected VPN TRUNK profile. The corresponding members (LAN-to-LAN profiles) grouped in the deleted VPN TRUNK profile will be released and that profiles in LAN-to-LAN will be displayed in black.</p> |

Time for activating VPN TRUNK – VPN Backup mechanism profile

VPN TRUNK – VPN Backup mechanism will be activated automatically after the initial connection of single VPN Tunnel off-line. The content in Member1/2 within VPN TRUNK – VPN Backup mechanism backup profile is similar to dial-out profile configured in LAN-to-LAN web page. VPN TRUNK – VPN Backup mechanism backup profile will process and handle everything unless it is off-line once it is activated.

How can you set a VPN TRUNK-VPN Backup mechanism profile?

1. First of all, go to **VPN and Remote Access>>LAN-to-LAN**. Set two or more LAN-to-LAN profiles first that will be used for Member1 and Member2. If you do not set enough LAN-to-LAN profiles, you cannot operate VPN TRUNK – VPN Backup mechanism profile management well.
2. Access into **VPN and Remote Access>>VPN TRUNK Management**.
3. Set one group of VPN TRUNK – VPN Backup mechanism backup profile by choosing **Enable** radio button; type a name for such profile (e.g., 071023); choose one of the LAN-to-LAN profiles from Member1 drop down list; choose one of the LAN-to-LAN profiles from Member2 drop down list; and click **Add** at last.

General Setup

| Status | <input checked="" type="radio"/> Enable <input type="radio"/> Disable | | | | | | | | | | | | |
|--------------|---|-------------------|-----------------|-------------------|-----------------|---|-----------------|--|---------------|---|-----------------|--|---------------|
| Profile Name | <input type="text"/> | | | | | | | | | | | | |
| Member1 | Please select a LAN-to-LAN Dial-Out profile. | | | | | | | | | | | | |
| Member2 | Please select a LAN-to-LAN Dial-Out profile. | | | | | | | | | | | | |
| Active Mode | <table border="1"> <thead> <tr> <th>No.</th> <th><Name></th> <th><Connection-Type></th> <th><VPN Server IP></th> </tr> </thead> <tbody> <tr> <td>1</td> <td>To-A PlaceIPSec</td> <td></td> <td>192.168.2.255</td> </tr> <tr> <td>2</td> <td>To-B Site IPSec</td> <td></td> <td>192.168.2.255</td> </tr> </tbody> </table> | No. | <Name> | <Connection-Type> | <VPN Server IP> | 1 | To-A PlaceIPSec | | 192.168.2.255 | 2 | To-B Site IPSec | | 192.168.2.255 |
| No. | <Name> | <Connection-Type> | <VPN Server IP> | | | | | | | | | | |
| 1 | To-A PlaceIPSec | | 192.168.2.255 | | | | | | | | | | |
| 2 | To-B Site IPSec | | 192.168.2.255 | | | | | | | | | | |

4. Take a look for LAN-to-LAN profiles. Index 1 is chosen as Member1; index 2 is chosen as Member2. For such reason, LAN-to-LAN profiles of 1 and 2 will be expressed in red to indicate that they are fixed. If you delete the VPN TRUNK – VPN Backup mechanism profile, the selected LAN-to-LAN profiles will be released and expressed in black.

LAN-to-LAN Profiles:

| Index | Name | Status |
|-------|------------|--------|
| 1. | To-A Place | √ |
| 2. | To-B Site | √ |
| 3. | To-C place | √ |
| 4. | To-D Site | √ |
| 5. | ??? | √ |

How can you set a GRE over IPSec profile?

1. Please go to LAN to LAN to set a profile with IPSec.
2. If the router will be used as the VPN Server (i.e., with virtual address 192.168.50.200). Please type 192.168.50.200 in the field of My GRE IP. Type IP address (192.168.50.100) of the client in the field of Peer GRE IP. See the following graphic for an example.

Callback Budget minute(s)

4. GRE over IPSec Settings

From first subnet to remote network, you have to do

Change default route to this VPN tunnel (Only single WAN supports this)

Advanced Backup

After setting profiles for load balance, you can choose any one of them and click **Advanced** for more detailed configuration. The windows for advanced load balance and backup are different. Refer to the following explanation:

Available settings are explained as follows:

| Item | Description |
|---------------------------|---|
| Profile Name | List the backup profile name. |
| ERD Mode | ERD means “Environment Recovers Detection”. Normal – choose this mode to make all dial-out VPN TRUNK backup profiles being activated alternatively. Resume – when VPN connection breaks down or disconnects, Member 1 will be the top priority for the system to do VPN connection. |
| Detail Information | This field will display detailed information for Environment Recovers Detection. |

4.10.10 Connection Management

You can find the summary table of all VPN connections. You may disconnect any VPN connection by clicking **Drop** button. You may also aggressively Dial-out by using Dial-out Tool and clicking **Dial** button.

VPN and Remote Access >> Connection Management

4.11 Certificate Management

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

Any entity wants to utilize digital certificates should first request a certificate issued by a CA server. It should also retrieve certificates of other trusted CA servers so it can authenticate the peer with certificates issued by those trusted CA servers.

Here you can manage generate and manage the local digital certificates, and set trusted CA certificates. Remember to adjust the time of Vigor router before using the certificate so that you can get the correct valid period of certificate.

Below shows the menu items for Certificate Management.

4.11.1 Local Certificate

Certificate Management >> Local Certificate

X509 Local Certificate Configuration

| Name | Subject | Status | Modify |
|-------|---------|--------|---|
| Local | --- | --- | <input type="button" value="View"/> <input type="button" value="Delete"/> |

X509 Local Certificate

Available settings are explained as follows:

| Item | Description |
|-----------------|---|
| Generate | Click this button to open Generate Certificate Request window. |

| Item | Description |

4.11.2 Trusted CA Certificate

Trusted CA certificate lists three sets of trusted CA certificate.

[Certificate Management >> Trusted CA Certificate](#)

X509 Trusted CA Certificate Configuration

| Name | Subject | Status | Modify | |
|--------------|---------|--------|-------------------------------------|---------------------------------------|
| Trusted CA-1 | --- | --- | <input type="button" value="View"/> | <input type="button" value="Delete"/> |
| Trusted CA-2 | --- | --- | <input type="button" value="View"/> | <input type="button" value="Delete"/> |
| Trusted CA-3 | --- | --- | <input type="button" value="View"/> | <input type="button" value="Delete"/> |

To import a pre-saved trusted CA certificate, please click **IMPORT** to open the following window. Use **Browse...** to find out the saved text file. Then click **Import**. The one you imported will be listed on the Trusted CA Certificate window. Then click **Import** to use the pre-saved file.

[Certificate Management >> Trusted CA Certificate](#)

Import X509 Trusted CA Certificate

Select a trusted CA certificate file.

Click [Import](#) to upload the certification.

For viewing each trusted CA certificate, click **View** to open the certificate detail information window. If you want to delete a CA certificate, choose the one and click **Delete** to remove all the certificate information.

4.11.3 Certificate Backup

Local certificate and Trusted CA certificate for this router can be saved within one file. Please click **Backup** on the following screen to save them. If you want to set encryption password for these certificates, please type characters in both fields of **Encrypt password** and **Confirm password**.

Also, you can use **Restore** to retrieve these two settings to the router whenever you want.

Certificate Management >> Certificate Backup

Certificate Backup / Restoration

Backup

Encrypt password:

Confirm password:

Click to download certificates to your local PC as a file.

Restoration

Select a backup file to restore.

Decrypt password:

Click to upload the file.

4.12 VoIP

Note: This function is used for “V” models.

Voice over IP network (VoIP) enables you to use your broadband Internet connection to make toll quality voice calls over the Internet.

There are many different call signaling protocols, methods by which VoIP devices can talk to each other. The most popular protocols are SIP, MGCP, Megaco and H.323. These protocols are not all compatible with each other (except via a soft-switch server).

The Vigor V models support the SIP protocol as this is an ideal and convenient deployment for the ITSP (Internet Telephony Service Provider) and softphone and is widely supported. SIP is an end-to-end, signaling protocol that establishes user presence and mobility in VoIP structure. Every one who wants to talk using his/her SIP Uniform Resource Identifier, “SIP Address”. The standard format of SIP URI is

sip: user:password @ host: port

Some fields may be optional in different use. In general, “host” refers to a domain. The “userinfo” includes the user field, the password field and the @ sign following them. This is very similar to a URL so some may call it “SIP URL”. SIP supports peer-to-peer direct calling and also calling via a SIP proxy server (a role similar to the gatekeeper in H.323 networks), while the MGCP protocol uses client-server architecture, the calling scenario being very similar to the current PSTN/ISDN network.

After a call is setup, the voice streams transmit via RTP (Real-Time Transport Protocol). Different codecs (methods to compress and encode the voice) can be embedded into RTP packets. Vigor V models provide various codecs, including G.711 A/μ-law, G.723, G.726 and G.729 A & B. Each codec uses a different bandwidth and hence provides different levels of voice quality. The more bandwidth a codec uses the better the voice quality, however the codec used must be appropriate for your Internet bandwidth.

Usually there will be two types of calling scenario, as illustrated below:

- **Calling via SIP Servers**

First, the Vigor V models of yours will have to register to a SIP Registrar by sending registration messages to validate. Then, both parties' SIP proxies will forward the sequence of messages to caller to establish the session.

If you both register to the same SIP Registrar, then it will be illustrated as below:

The major benefit of this mode is that you don't have to memorize your friend's IP address, which might change very frequently if it's dynamic. Instead of that, you will only have to using **dial plan** or directly dial your friend's **account name** if you are with the same SIP Registrar.

- **Peer-to-Peer**

Before calling, you have to know your friend's IP Address. The Vigor VoIP Routers will build connection between each other.

Our Vigor V models firstly apply efficient codecs designed to make the best use of available bandwidth, but Vigor V models also equip with automatic QoS assurance. QoS Assurance assists to assign high priority to voice traffic via Internet. You will always have the required inbound and outbound bandwidth that is prioritized exclusively for Voice traffic over Internet but you just get your data a little slower and it is tolerable for data traffic.

Wireless LAN

4.12.1 DialPlan

This page allows you to set phone book and digit map for the VoIP function. Click the **Phone Book** and **Digit Map** links on the page to access into next pages for dialplan settings.

VoIP >> DialPlan Setup

DialPlan Configuration

| |
|------------------------------|
| Phone Book |
| Digit Map |
| Call Barring |
| Regional |
| PSTN Setup |

Secure Phone configuration

| |
|---|
| <input checked="" type="checkbox"/> Enable Secure Phone (ZRTP+SRTP) |
| <input checked="" type="checkbox"/> Enable SAS Voice Prompt |

OK

Available settings are explained as follows:

| Item | Description |
|--------------------------------|--|
| Enable Secure Phone | It allows users to have encrypted RTP stream with the peer side using the same protocol (ZRTP+SRTP). Check this box to have secure call. |
| Enable SAS Voice Prompt | If it is enabled, SAS prompt will be heard every time. If it is disabled, no SAS prompt will be heard any more. |

Application for Secure Phone

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking **Enable Secure Phone** and **Enable SAS Voice Prompt**, then:

1. After the connection established, vigor router A will send SAS voice prompt to A and vigor router B will send the SAS voice prompt to B.
2. Then the RTP traffic is secured until the call ends.
3. If vigor router A wants to call vigor router B again next time, both A and B will not hear any voice prompt again even checking **Enable SAS Voice Prompt** on web UI. It means only the first call between them will have voice prompt.

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking **Enable Secure Phone** but not **Enable SAS Voice Prompt**, then:

1. After the connection established, vigor router A will **NOT** send SAS voice prompt to vigor router A and vigor router B will NOT send the SAS voice prompt to vigor router B.
2. Even no voice prompt, but the RTP traffic is still secured until the call ends.

Note: If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected"(e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.

Phone Book

In this section, you can set your VoIP contacts in the “phonebook”. It can help you to make calls quickly and easily by using “speed-dial” **Phone Number**. There are total 60 index entries in the phonebook for you to store all your friends and family members’ SIP addresses. **Loop through** and **Backup Phone Number** will be displayed if you are using Vigor 2920V for setting the phone book.

VoIP >> DialPlan Setup

Phone Book

VoIP >> DialPlan Setup

Phone Book Index No. 1

Enable

Phone Number:

Display Name:

SIP URL: @

Dial Out Account:

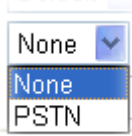

Loop through:

Backup Phone Number:

Secure Phone:

Available settings are explained as follows:

| Item | Description |
|---------------------|--|
| Enable | Check it to enable this entry. |
| Phone Number | The speed-dial number of this index. This can be any number you choose, using digits 0-9 and * . |
| Display Name | The name entered here is to remind the user whose number it is. |
| SIP URL | Enter your friend’s SIP Address. |

| | |
|----------------------------|--|
| Dial Out Account | <p>Choose one of the SIP accounts for this profile to dial out. It is useful for both sides (caller and callee) that registered to different SIP Registrar servers. If caller and callee do not use the same SIP server, sometimes, the VoIP phone call connection may not succeed. By using the specified dial out account, the successful connection can be assured.</p> |
| Loop through | <p>Choose PSTN to enable loop through function.</p>  |
| Backup Phone Number | <p>When the VoIP phone is obstructs or the Internet breaks down for some reasons, the backup phone will be dialed out to replace the VoIP phone number. At this time, the phone call will be changed from VoIP phone into PSTN call according to the loop through direction chosen. Note that, during the phone switch, the blare of phone will appear for a short time. And when the VoIP phone is switched into the PSTN phone, the telecom co. might charge you for the connection fee. Please type in backup phone number (PSTN number/ISDN number) for this VoIP phone setting.</p> |
| Secure Phone | <p>ZRTP+SRTP: A call made to the number specified in the phonebook will be "compulsorily" encrypted. If the encryption is not successful (e.g. peer side does not support ZRTP/SRTP), a warning voice should be played.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected"(e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.</p> </div> |

Digit Map

For the convenience of user, this page allows users to edit prefix number for the SIP account with adding number, stripping number or replacing number. It is used to help user having a quick and easy way to dial out through VoIP interface.

VoIP >> DialPlan Setup

Digit Map Setup

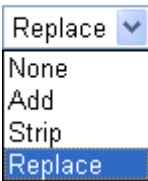

| # | Enable | Match Prefix | Mode | OP Number | Min Len | Max Len | Route | Move Up | Move Down |
|----|-------------------------------------|--------------|---------|-----------|---------|---------|-------|---------|-----------|
| 1 | <input checked="" type="checkbox"/> | 03 | Replace | 8863 | 7 | 9 | PSTN | | Down |
| 2 | <input checked="" type="checkbox"/> | 886 | Strip | 886 | 8 | 10 | VoIP1 | UP | Down |
| 3 | <input type="checkbox"/> | | None | | 0 | 0 | PSTN | UP | Down |
| 4 | <input type="checkbox"/> | | None | | 0 | 0 | PSTN | UP | Down |
| 5 | <input type="checkbox"/> | | None | | 0 | 0 | PSTN | UP | Down |
| 17 | <input type="checkbox"/> | | None | | 0 | 0 | PSTN | UP | Down |
| 18 | <input type="checkbox"/> | | None | | 0 | 0 | PSTN | UP | Down |
| 19 | <input type="checkbox"/> | | None | | 0 | 0 | PSTN | UP | Down |
| 20 | <input type="checkbox"/> | | None | | 0 | 0 | PSTN | UP | |

Note:
 1. The length for Min Len and Max Len fields should be between 0~25.
 2. Wildcard '?' is supported.

OK Cancel

Available settings are explained as follows:

| Item | Description |
|---------------------|---|
| Enable | Check it to enable this entry. |
| Match Prefix | The phone number set here is used to add, strip, or replace the OP number. |
| Mode | <p>None - No action.</p> <p>Add - When you choose this mode, the OP number will be added with the prefix number for calling out through the specific VoIP interface.</p> <p>Strip - When you choose this mode, the OP number will be deleted by the prefix number for calling out through the specific VoIP interface. Take the above picture (Prefix Table Setup web page) as an example, the OP number of 886 will be deleted completely for the prefix number is set with 886.</p> <p>Replace - When you choose this mode, the OP number will be replaced by the prefix number for calling out through the specific VoIP interface. Take the above picture (Prefix Table Setup web page) as an example, the prefix number of 03 will be replaced by 8863. For example: dial number of "03111111" will be changed to "8863111111" and sent to SIP server.</p> |

| Item | Description |
|---------------------------|--|
| | Mode  |
| OP Number | The front number you type here is the first part of the account number that you want to execute special function (according to the chosen mode) by using the prefix number. |
| Min Len | Set the minimal length of the dial number for applying the prefix number settings. Take the above picture (Prefix Table Setup web page) as an example, if the dial number is between 7 and 9, that number can apply the prefix number settings here. |
| Max Len | Set the maximum length of the dial number for applying the prefix number settings. |
| Route | Choose the one that you want to enable the prefix number settings from the saved SIP accounts. Please set up one SIP account first to make this interface available. This item will be changed according to the port settings configured in VoIP>> Phone Settings . |
| Move UP /Move Down | Click the link to move the selected entry up or down. |

Call Barring

Call barring is used to block phone calls coming from the one that is not welcomed.

[VoIP >> DialPlan Setup](#)

| Call Barring Setup | | | | | | Set to Factory Default |
|---------------------|----------------|--------------|------------------------|-------|----------|--|
| Index | Call Direction | Barring Type | Barring Number/URL/URI | Route | Schedule | Status |
| 1. | | | | | | x |
| 2. | | | | | | x |
| 3. | | | | | | x |
| 4. | | | | | | x |
| 5. | | | | | | x |
| 6. | | | | | | x |
| 7. | | | | | | x |
| 8. | | | | | | x |
| 9. | | | | | | x |
| 10. | | | | | | x |

[<< 1-10 | 11-20 >>](#)

[Next >>](#)

Advanced:
[Block Anonymous](#)
[Block Unknown Domain](#)
[Block IP Address](#)

Each item is explained as follows:

| Item | Description |
|-------------------------------|---|
| Index | Display the number link that you can click for configuration. |
| Call Direction | Display the direction (IN, OUT, or IN & OUT) for the phone call |
| Barring Type | Display the type of the VoIP phone call. |
| Barring Number/URL/URI | Display the number, URL or URI of this entry. |
| Route | Display if all the phone calls will be blocked with such mechanism. |
| Schedule | Display the schedule profiles applied to this entry. |
| Status | Display such entry is enabled or not. |
| Block Anonymous | Block the incoming calls without caller ID on the interface. |
| Block Unknown Domain | Block incoming calls (through Phone port) from unrecognized domain that is not specified in SIP accounts. |
| Block IP Address | Block incoming calls (through Phone port) coming from IP address. |

Simply click any index number to display the dial plan setup page.

VoIP >> DialPlan Setup

Call Barring Index No. 1

Enable

Call Direction: IN

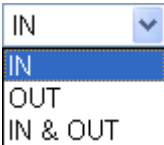

Barring Type: Specific URI/URL

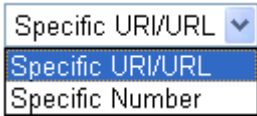

Specific URI/URL:

Route: All

Index(1-15) in [Schedule Setup](#): , , ,

Available settings are explained as follows:

| Item | Description |
|-----------------------|--|
| Enable | Check it to enable this entry. |
| Call Direction | Determine the direction for the phone call, IN – incoming call, OUT-outgoing call, IN & OUT – both incoming and outgoing calls.  |
| Barring Type | Determine the type of the VoIP phone call, URI/URL or number. |

| Item | Description |
|--|---|
| |  |
| Specific URI/URL or Specific Number | This field will be changed based on the type you selected for barring Type. |
| Route | All means all the phone calls will be blocked with such mechanism. |
| Index (1-15) in Schedule | Enter the index of schedule profiles to control the call barring according to the preconfigured schedules. Refer to section Applications>>Schedule for detailed configuration. |

Additionally, you can set advanced settings for call barring such as **Block Anonymous**, **Block Unknown Domain** or **Block IP Address**. Simply click the relational links to open the web page.

For **Block Anonymous** – this function can block the incoming calls without caller ID on the interface (Phone port) specified in the following window. Such control also can be done based on preconfigured schedules.

VoIP >> DialPlan Setup

Call Barring Block Anonymous

Enable
Route Phone1 Phone2
Index(1-15) in [Schedule](#) Setup , , ,

Note:Block the incoming calls which do not have the caller ID.

For **Block Unknown Domain** – this function can block incoming calls (through Phone port) from unrecognized domain that is not specified in SIP accounts. Such control also can be done based on preconfigured schedules.

VoIP >> DialPlan Setup

Call Barring Block Unknown Domain

Enable
Route Phone1 Phone2
Index(1-15) in [Schedule](#) Setup , , ,

Note:If the domain of the incoming call is different from the domain found in SIP accounts, the call should be blocked.

For **Block IP Address** – this function can block incoming calls (through Phone port) coming from IP address. Such control also can be done based on preconfigured schedules.

VoIP >> DialPlan Setup

Call Barring Block IP Address

Enable

Route Phone1 Phone2

Index(1-15) in [Schedule](#) Setup , , ,

Note: The incoming calls by means of IP dialing (e.g.#192*168*1*1#) should be blocked.

Regional

This page allows you to process incoming or outgoing phone calls by regional. Default values (common used in most areas) will be shown on this web page. You *can change* the number based on the region that the router is placed.

VoIP >> DialPlan Setup

Enable Regional [Set to Factory Default](#)

| | | | |
|----------------------------|--|------------------------------|--|

| Block Last Calls [Act]: | <input type="text" value="*60"/> +# | | |

Available settings are explained as follows:

| Item | Description |
|--------------------------------|---|
| Enable Regional | Check this box to enable this function. |
| Last Call Return [Miss] | Sometimes, people might miss some phone calls. Please dial number typed in this field to know where the last phone call comes from and call back to that one. |
| Last Call Return [In] | You have finished an incoming phone call, however you want to call back again for some reason. Please dial number typed in this field to call back to that one. |
| Last Call Return [Out] | Dial the number typed in this field to call the previous outgoing phone call again. |

| Item | Description |
|-------------------------------------|---|
| Call Forward [All][Act] | Dial the number typed in this field to forward all the incoming calls to the specified place. |
| Call Forward [Deact] | Dial the number typed in this field to release the call forward function. |
| Call Forward [Busy][Act] | Dial the number typed in this field to forward all the incoming calls to the specified place while the phone is busy. |
| Call Forward [No Ans][Act] | Dial the number typed in this field to forward all the incoming calls to the specified place while there is no answer of the connected phone. |
| Do Not Disturb [Act] | Dial the number typed in this field to invoke the function of DND. |
| Do Not Distrub [Deact] | Dial the number typed in this field to release the DND function. |
| Hide caller ID [Act] | Dial the number typed in this field to make your phone number (ID) not displayed on the display panel of remote end. |
| Hide caller ID [Deact] | Dial the number typed in this field to release this function. |
| Call Waiting [Act] | Dial the number typed in this field to make all the incoming calls waiting for your answer. |
| Call Waiting [Deact] | Dial the number typed in this field to release this function. |
| Block Anonymous[Act] | Dial the number typed in this field to block all the incoming calls with unknown ID. |
| Block Anonymous[Deact] | Dial the number typed in this field to release this function. |
| Block Unknown Domain [Act] | Dial the number typed in this field to block all the incoming calls from unknown domain. |
| Block Unknown Domain [Deact] | Dial the number typed in this field to release this function. |
| Block IP Calls [Act] | Dial the number typed in this filed to block all the incoming calls from IP address. |
| Block IP Calls [Deact] | Dial the number typed in this field to release this function. |
| Block Last Calls [Act] | Dial the number typed in this field to block the last incoming phone call. |

PSTN Setup

Some emergency phone (e.g., 911) or special phone cannot be dialed out by using VoIP and can be called out through PSTN line only. To solve this problem, this page allows you to set five sets of PSTN number for dialing without passing through Internet. Please type the number in the field of **phone number for PSTN relay**.

VoIP >> PSTN Setup

Default phone number for PSTN relay

| Enable | phone number for PSTN relay |
|--------------------------|-----------------------------|
| <input type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |

OK Cancel

Then, check the **Enable** box to make the PSTN number available for dial whenever you need.

4.12.2 SIP Accounts

In this section, you set up your own SIP settings. When you apply for an account, your SIP service provider will give you an **Account Name** or user name, **SIP Registrar**, **Proxy**, and **Domain name**. (The last three might be the same in some case). Then you can tell your folks your SIP Address as in **Account Name@ Domain name**

As Vigor VoIP Router is turned on, it will first register with Registrar using AuthorizationUser@Domain/Realm. After that, your call will be bypassed by SIP Proxy to the destination using AccountName@Domain/Realm as identity.

Note: Selection items for **Ring Port** will differ according to the router you have.

SIP Accounts List

Refresh

| Index | Profile | Domain/Realm | Proxy | Account Name | Codec | Ring Port | | Status |
|--------------------|---------|--------------|-------|--------------|----------|---------------------------------|---------------------------------|--------|
| 1 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 2 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |

| 5 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 6 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 7 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 8 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 9 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 10 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 11 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |
| 12 | | | | --- | G.729A/B | <input type="checkbox"/> Phone1 | <input type="checkbox"/> Phone2 | - |

R: success registered on SIP server
 -: fail to register on SIP server

NAT Traversal Setting

| | |
|--------------------|--------------------------------------|
| STUN Server: | <input type="text"/> |
| External IP: | <input type="text"/> |
| SIP PING Interval: | <input type="text" value="150"/> sec |

OK

Available settings are explained as follows:

| Item | Description |
|---------------------|--|
| Index | Click this link to access into next page for setting SIP account. |
| Profile | Display the profile name of the account. |
| Domain/Realm | Display the domain name or IP address of the SIP registrar server. |
| Proxy | Display the domain name or IP address of the SIP proxy server. |
| Account Name | Display the account name of SIP address before @. |
| Codec | Display the codec type for the account. |
| Ring Port | Specify which port will ring when receiving a phone call. Set Phone, ISDN1-S0 or ISDN-TE as the default ring port for the SIP account. If you choose Phone or ISDN1-S0, the ISDN2-TE selection will be dimmed, vice versa. There are ten internal lines with numbers (30 – 39) offered for ISDN-S0 . You can specify any one of them as ring port for specified SIP account. By the way, ISDN-S0 can be used by mapping with MSN numbers. |
| Status | Show the status for the corresponding SIP account. R means such account is registered on SIP server successfully. – means the account is failed to register on SIP server. |

| Item | Description |
|--------------------------|---|
| STUN Server | Type in the IP address or domain of the STUN server. |
| External IP | Type in the gateway IP address. |
| SIP PING interval | The default value is 150 (sec). It is useful for a Nortel server NAT Traversal Support. |

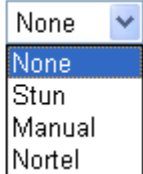

VoIP >> SIP Accounts

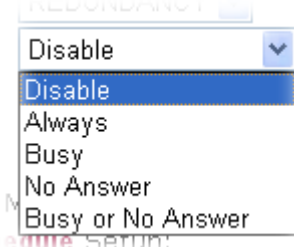

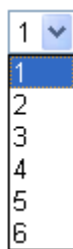

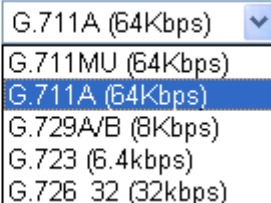

SIP Account Index No. 12

| | |
|--|---|
| Profile Name | <input type="text"/> (11 char max.) |
| Register via | None <input type="checkbox"/> Call without Registration |
| SIP Port | 5060 |
| Domain/Realm | <input type="text"/> (63 char max.) |
| Proxy | <input type="text"/> (63 char max.) |
| <input type="checkbox"/> Act as outbound proxy | |
| Display Name | <input type="text"/> (23 char max.) |
| Account Number/Name | --- (63 char max.) |
| <input type="checkbox"/> Authentication ID | <input type="text"/> (63 char max.) |
| Password | <input type="text"/> (63 char max.) |
| Expiry Time | 1 hour <input type="text"/> 3600 sec |
| NAT Traversal Support | None |
| Call Forwarding | Disable |
| SIP URL | <input type="text"/> |
| Time Out | 30 sec |
| Ring Port | <input type="checkbox"/> Phone1 <input type="checkbox"/> Phone2 |
| Ring Pattern | 1 |
| Prefer Codec | G.729A/B (8Kbps) <input type="checkbox"/> Single Codec |
| Packet Size | 20ms |
| Voice Active Detector | Off |

Available settings are explained as follows:

| Item | Description |
|---------------------|--|
| Profile Name | Assign a name for this profile for identifying. You can type similar name with the domain. For example, if the domain name is <i>draytel.org</i> , then you might set <i>draytel-1</i> in this field. |
| Register via | If you want to make VoIP call without register personal information, please choose None and check the box to achieve the goal. Some SIP server allows user to use VoIP function without registering. For such server, please check the box of Call without Registration . Choosing Auto is recommended. The system will select a proper way for your VoIP call. |

| | |
|------------------------------|---|
| |  |
| SIP Port | Set the port number for sending/receiving SIP message for building a session. The default value is 5060 . Your peer must set the same value in his/her Registrar. |
| Domain/Realm | Set the domain name or IP address of the SIP Registrar server. |
| Proxy | Set domain name or IP address of SIP proxy server. By the time you can type :port number after the domain name to specify that port as the destination of data transmission (e.g., nat.draytel.org:5065) |
| Act as Outbound Proxy | Check this box to make the proxy acting as outbound proxy. |
| Display Name | The caller-ID that you want to be displayed on your friend's screen. |
| Account Number/Name | Enter your account name of SIP Address, e.g. every text before @. |
| Authentication ID | Check the box to invoke this function and enter the name or number used for SIP Authorization with SIP Registrar. If this setting value is the same as Account Name, it is not necessary for you to check the box and set any value in this field. |
| Password | The password provided to you when you registered with a SIP service. |
| Expiry Time | The time duration that your SIP Registrar server keeps your registration record. Before the time expires, the router will send another register request to SIP Registrar again. |
| NAT Traversal Support | <p>If the router (e.g., broadband router) you use connects to internet by other device, you have to set this function for your necessity.</p> <p>NAT Traversal Support </p> <p>None – Disable this function. Stun – Choose this option if there is Stun server provided for your router. Manual – Choose this option if you want to specify an external IP address as the NAT transversal support. Nortel – If the soft-switch that you use supports Nortel solution, you can choose this option.</p> |

| | |
|-------------------------------|---|
| <p>Call Forwarding</p> | <p>There are four options for you to choose. Disable is to close call forwarding function. Always means all the incoming calls will be forwarded into SIP URL without any reason. Busy means the incoming calls will be forwarded into SIP URL only when the local system is busy. No Answer means if the incoming calls do not receive any response, they will be forwarded to the SIP URL by the time out.</p>  <p>SIP URL – Type in the SIP URL (e.g., aaa@draytel.org or abc@iptel.org) as the site for call forwarded.</p> <p>Time Out – Set the time out for the call forwarding. The default setting is 30 sec.</p> |
| <p>Ring Port</p> | <p>Set Phone 1 and/or Phone 2 as the default ring port(s) for this SIP account.</p> |
| <p>Ring Pattern</p> | <p>Choose a ring tone type for the VoIP phone call.</p> <p>Ring Pattern </p> |
| <p>Prefer Codec</p> | <p>Select one of five codecs as the default for your VoIP calls. The codec used for each call will be negotiated with the peer party before each session, and so may not be your default choice. The default codec is G.729A/B; it occupies little bandwidth while maintaining good voice quality.</p> <p>If your upstream speed is only 64Kbps, do not use G.711 codec. It is better for you to have at least 256Kbps upstream if you would like to use G.711.</p> <p>Prefer Codec </p> <p>Single Codec – If the box is checked, only the selected Codec will be applied.</p> |
| <p>Packet Size</p> | <p>The amount of data contained in a single packet. The default value is 20 ms, which means the data packet will contain 20 ms voice information.</p> |

| | | |
|------------------------------|--|--|
| | Packet Size | <div style="border: 1px solid black; padding: 2px;"> 20ms ▾ 10ms 20ms 30ms 40ms 50ms 60ms </div> |
| Voice Active Detector | <p>This function can detect if the voice on both sides is active or not. If not, the router will do something to save the bandwidth for other using. Click On to invoke this function; click off to close the function.</p> <p>Voice Active Detector</p> | <div style="border: 1px solid black; padding: 2px;"> Off ▾ Off On </div> |

4.12.3 Phone Settings

This page allows user to set phone settings for Phone 1 and Phone 2 respectively. However, it changes slightly according to different model you have.

VoIP >> Phone Settings

| Index | Port | Call Feature | Tone | Gain (Mic/Speaker) | Default SIP Account | DTMF Relay |
|-------|--------|--------------|--------------|--------------------|---------------------|------------|
| 1 | Phone1 | CW,CT, | User Defined | 5/5 | | InBand |
| 2 | Phone2 | CW,CT, | User Defined | 5/5 | | InBand |

RTP

Symmetric RTP
Dynamic RTP Port Start
Dynamic RTP Port End
RTP TOS

OK

Available settings are explained as follows:

| Item | Description |
|-------------------|--|
| Phone List | <p>Port – there are two phone ports provided here for you to configure. Phone1/Phone2 allows you to set general settings for PSTN phones.</p> <p>Call Feature – A brief description for call feature will be shown in this field for your reference.</p> <p>Tone - Display the tone settings that configured in the advanced settings page of Phone Index.</p> <p>Gain - Display the volume gain settings for Mic/Speaker that configured in the advanced settings page of Phone Index.</p> <p>Default SIP Account – “draytel_1” is the default SIP account. You can click the number below the Index field to change SIP account for each phone port.</p> |

| Item | Description |
|-------------------|--|
| | <p>DTMF Relay – Display DTMF mode that configured in the advanced settings page of Phone Index.</p> |
| <p>RTP</p> | <p>Symmetric RTP – Check this box to invoke the function. To make the data transmission going through on both ends of local router and remote router not misleading due to IP lost (for example, sending data from the public IP of remote router to the private IP of local router), you can check this box to solve this problem.</p> <p>Dynamic RTP Port Start - Specifies the start port for RTP stream. The default value is 10050.</p> <p>Dynamic RTP Port End - Specifies the end port for RTP stream. The default value is 15000.</p> <p>RTP TOS – It decides the level of VoIP package. Use the drop down list to choose any one of them.</p> <div data-bbox="1050 779 1334 1346" style="border: 1px solid black; padding: 5px;"> <p>Manual</p> <p>IP precedence 1</p> <p>IP precedence 2</p> <p>IP precedence 3</p> <p>IP precedence 4</p> <p>IP precedence 5</p> <p>IP precedence 6</p> <p>IP precedence 7</p> <p>AF Class1 (Low Drop)</p> <p>AF Class1 (Medium Drop)</p> <p>AF Class1 (High Drop)</p> <p>AF Class2 (Low Drop)</p> <p>AF Class2 (Medium Drop)</p> <p>AF Class2 (High Drop)</p> <p>AF Class3 (Low Drop)</p> <p>AF Class3 (Medium Drop)</p> <p>AF Class3 (High Drop)</p> <p>AF Class4 (Low Drop)</p> <p>AF Class4 (Medium Drop)</p> <p>AF Class4 (High Drop)</p> <p>EF Class</p> <p>RTP TOS Manual ▼</p> </div> |

Detailed Settings for Phone Port

Click the number link for Phone port, you can access into the following page for configuring Phone settings.

VoIP >> Phone Settings

Phone1

| | |
|---|---|
| <p>Call Feature</p> <p><input type="checkbox"/> Hotline <input style="width: 100px;" type="text"/></p> <p><input type="checkbox"/> Session Timer <input style="width: 50px;" type="text" value="90"/> sec</p> <p><input type="checkbox"/> T.38 Fax Function</p> <p>Error Correction Mode <input type="text" value="REDUNDANCY"/> ▼</p> <p><input type="checkbox"/> DND(Do Not Disturb) Mode</p> <p>Index(1-15) in Schedule Setup:</p> <p><input type="checkbox"/>, <input type="checkbox"/>, <input type="checkbox"/>, <input type="checkbox"/></p> <p>Note: Action and Idle Timeout settings will be ignored.</p> <p>Index(1-60) in Phone Book as Exception List:</p> <p><input type="checkbox"/>, <input type="checkbox"/>, <input type="checkbox"/>, <input type="checkbox"/>, <input type="checkbox"/></p> <p><input type="checkbox"/> CLIR (hide caller ID)</p> <p><input checked="" type="checkbox"/> Call Waiting</p> <p><input checked="" type="checkbox"/> Call Transfer</p> | <p>Default SIP Account <input style="width: 50px;" type="text" value="▼"/></p> <p><input type="checkbox"/> Play dial tone only when account registered</p> |
|---|---|

Available settings are explained as follows:

| Item | Description |
|----------------------------------|---|
| Hotline | Check the box to enable it. Type in the SIP URL in the field for dialing automatically when you pick up the phone set. |
| Session Timer | Check the box to enable the function. In the limited time that you set in this field, if there is no response, the connecting call will be closed automatically. |
| T.38 Fax Function | Check the box to enable T.38 fax function. Error Correction Mode – choose a mode for error correction. |
| DND (Do Not Disturb) mode | Set a period of peace time without disturbing by VoIP phone call. During the period, the one who dial in will listen busy tone, yet the local user will not listen any ring tone. Index (1-15) in Schedule - Enter the index of schedule profiles to control when the phone will ring and when will not according to the preconfigured schedules. Refer to section Application >>Schedule for detailed configuration. Index (1-60) in Phone Book - Enter the index of phone book profiles. Refer to section DialPlan – Phone Book for detailed configuration. |
| CLIR (hide caller ID) | Check this box to hide the caller ID on the display panel of the phone set. |
| Call Waiting | Check this box to invoke this function. A notice sound will appear to tell the user new phone call is waiting for your response. Click hook flash to pick up the waiting phone call. |

| | |
|----------------------------|---|
| Call Transfer | Check this box to invoke this function. Click hook flash to initiate another phone call. When the phone call connection succeeds, hang up the phone. The other two sides can communicate, then. |
| Default SIP Account | You can set SIP accounts (up to six groups) on SIP Account page. Use the drop down list to choose one of the profile names for the accounts as the default one for this phone setting. Play dial tone only when account registered - Check this box to invoke the function. |

In addition, you can press the **Advanced** button to configure tone settings, volume gain, MISC and DTMF mode. **Advanced** setting is provided for fitting the telecommunication custom for the local area of the router installed. Wrong tone settings might cause inconvenience for users. To set the sound pattern of the phone set, simply choose a proper region to let the system find out the preset tone settings and caller ID type automatically. Or you can adjust tone settings manually if you choose User Defined. TOn1, TOff1, TOn2 and TOff2 mean the cadence of the tone pattern. TOn1 and TOn2 represent sound-on; TOff1 and TOff2 represent the sound-off.

VoIP >> Phone Settings

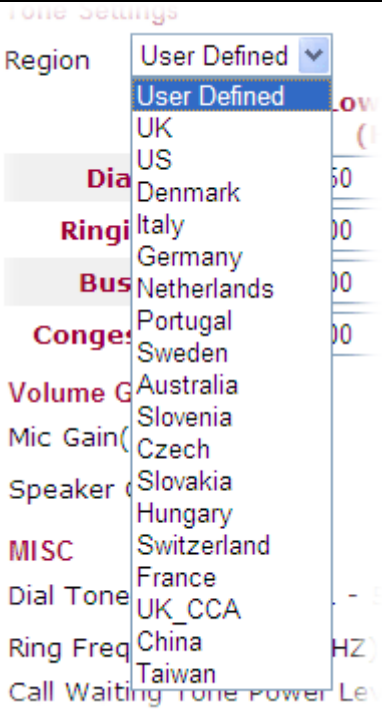

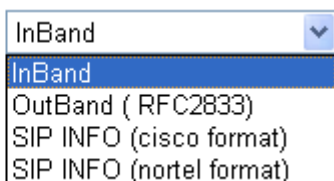

Advance Settings >> Phone 1

| Tone Settings | | | | | | |
|--|---------------|----------------|------------------------|----------------|---------------|----------------|
| Region | User Defined | | Caller ID Type | | | |
| | Low Freq (Hz) | High Freq (Hz) | T on 1 (msec) | T off 1 (msec) | T on 2 (msec) | T off 2 (msec) |
| Dial tone | 350 | 440 | 0 | 0 | 0 | 0 |
| Ringing tone | 400 | 450 | 400 | 200 | 400 | 2000 |
| Busy tone | 400 | 0 | 375 | 375 | 0 | 0 |
| Congestion tone | 400 | 0 | 400 | 350 | 225 | 525 |
| Volume Gain | | | DTMF | | | |
| Mic Gain(1-10) | 5 | | DTMF Mode | | InBand | |
| Speaker Gain(1-10) | 5 | | Payload Type (RFC2833) | | 101 | |
| MISC | | | | | | |
| Dial Tone Power Level (1 - 50) | 27 | | | | | |
| Ring Frequency (10 - 50HZ) | 25 | | | | | |
| Call Waiting Tone Power Level (1 - 30) | 13 | | | | | |

OK Cancel

Available settings are explained as follows:

| Item | Description |
|---------------|---|
| Region | Select the proper region which you are located. The common settings of Caller ID Type , Dial tone , Ringing tone , Busy tone and Congestion tone will be shown automatically on the page. If you cannot find out a suitable one, please choose User Defined and fill out the corresponding values for dial tone, ringing tone, busy tone, congestion tone by yourself for VoIP phone. |

| Item | Description |
|--------------------|---|
| |  <p>Also, you can specify each field for your necessity. It is recommended for you to use the default settings for VoIP communication.</p> |
| Volume Gain | Mic Gain (1-10)/Speaker Gain (1-10) - Adjust the volume of microphone and speaker by entering number from 1- 10. The larger of the number, the louder the volume is. |
| MISC | <p>Dial Tone Power Level - This setting is used to adjust the loudness of the dial tone. The smaller the number is, the louder the dial tone is. It is recommended for you to use the default setting.</p> <p>Ring Frequency - This setting is used to drive the frequency of the ring tone. It is recommended for you to use the default setting.</p> <p>Call Waiting Tone Power Level - This setting is used to adjust the loudness of the call waiting tone. The smaller the number is, the louder the tone is. It is recommended for you to use the default setting.</p> |
| DTMF | <p>DTMF Mode – There are four DTMF modes for you to choose.</p>  <ul style="list-style-type: none"> ● InBand - Choose this one then the Vigor will send the DTMF tone as audio directly when you press the keypad on the phone. ● OutBand - Choose this one then the Vigor will capture |

| Item | Description |
|------|--|
| | <p>the keypad number you pressed and transform it to digital form then send to the other side; the receiver will generate the tone according to the digital form it receive. This function is very useful when the network traffic congestion occurs and it still can remain the accuracy of DTMF tone.</p> <ul style="list-style-type: none"> ● SIP INFO- Choose this one then the Vigor will capture the DTMF tone and transfer it into SIP form. Then it will be sent to the remote end with SIP message. <p>Payload Type (rfc2833) - Choose a number from 96 to 127, the default value was 101. This setting is available for the OutBand (RFC2833) mode.</p> |

4.12.4 Status

From this page, you can find codec, connection and other important call status for each port.

VoIP >> Status

Status Refresh Seconds:

| Port | Status | Codec | PeerID | Elapse (hh:mm:ss) | Tx Pkts | Rx Pkts | Rx Losts | Rx Jitter (ms) | In Calls | Out Calls | Miss Calls | Speaker Gain |

| Phone1 | IDLE | | | 00:00:00 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 5 |
| Phone2 | IDLE | | | 00:00:00 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 5 |

Log

| Date (mm-dd-yyyy) | Time (hh:mm:ss) | Duration (hh:mm:ss) | In/Out/Miss | Account ID | Peer ID |
|----------------------|--------------------|------------------------|-------------|------------|---------|
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |
| 00-00-0 | 00:00:00 | 00:00:00 | - | - | - |

xxxxxxx : VoIP is encrypted.
xxxxxxx : VoIP isn't encrypted.

Each item is explained as follows:

| Item | Description |
|------------------------|---|
| Refresh Seconds | Specify the interval of refresh time to obtain the latest VoIP calling information. The information will update immediately when the Refresh button is clicked. Refresh Seconds : <input type="text" value="10"/> <input type="button" value="v"/> <div style="border: 1px solid #ccc; padding: 2px; display: inline-block; margin-left: 20px;"> 5 10 30 </div> |
| Port | It shows current connection status for Phone(s) and ISDN ports. |
| Status | It shows the VoIP connection status. IDLE - Indicates that the VoIP function is idle. HANG_UP - Indicates that the connection is not established (busy tone). CONNECTING - Indicates that the user is calling out. WAIT_ANS - Indicates that a connection is launched and waiting for remote user's answer. ALERTING - Indicates that a call is coming. ACTIVE -Indicates that the VoIP connection is launched. |
| Codec | Indicates the voice codec employed by present channel. |

| | |
|---------------------|---|
| PeerID | The present in-call or out-call peer ID (the format may be IP or Domain). |
| Elapse | The format is represented as hours:minutes:seconds. |
| Tx Pkts | Total number of transmitted voice packets during this connection session. |
| Rx Pkts | Total number of received voice packets during this connection session. |
| Rx Losts | Total number of lost packets during this connection session. |
| Rx Jitter | The jitter of received voice packets. |
| In Calls | Accumulation for the times of in call. |
| Out Calls | Accumulation for the times of out call. |
| Miss Calls | Accumulation for the times of missing call. |
| Speaker Gain | The volume of present call. |
| Log | Display logs of VoIP calls. |

4.13 Wireless LAN

This function is used for “n” models only.

4.13.1 Basic Concepts

Over recent years, the market for wireless communications has enjoyed tremendous growth. Wireless technology now reaches or is capable of reaching virtually every location on the surface of the earth. Hundreds of millions of people exchange information every day via wireless communication products. The Vigor “n” model, a.k.a. Vigor wireless router, is designed for maximum flexibility and efficiency of a small office/home. Any authorized staff can bring a built-in WLAN client PDA or notebook into a meeting room for conference without laying a clot of LAN cable or drilling holes everywhere. Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

The Vigor wireless routers are equipped with a wireless LAN interface compliant with the standard IEEE 802.11n draft 2 protocol. To boost its performance further, the Vigor Router is also loaded with advanced wireless technology to lift up data rate up to 300 Mbps*. Hence, you can finally smoothly enjoy stream music and video.

Note: * The actual data throughput will vary according to the network conditions and environmental factors, including volume of network traffic, network overhead and building materials.

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an Access Point (AP) connecting to lots of wireless clients or Stations (STA). All the STAs will share the same Internet connection via Vigor wireless router. The **General Settings** will set up the information of this wireless network, including its SSID as identification, located channel etc.

Multiple SSIDs

Vigor router supports four SSID settings for wireless connections. Each SSID can be defined with different name and download/upload rate for selecting by stations connected to the router wirelessly.

Security Overview

Real-time Hardware Encryption: Vigor Router is equipped with a hardware AES encryption engine so it can apply the highest protection to your data without influencing user experience.

Complete Security Standard Selection: To ensure the security and privacy of your wireless communication, we provide several prevailing standards on market.

WEP (Wired Equivalent Privacy) is a legacy method to encrypt each frame transmitted via radio using either a 64-bit or 128-bit key. Usually access point will preset a set of four keys and it will communicate with each station using only one out of the four keys.

WPA (Wi-Fi Protected Access), the most dominating security mechanism in industry, is separated into two categories: WPA-personal or called WPA Pre-Share Key (WPA/PSK), and WPA-Enterprise or called WPA/802.1x.

In WPA-Personal, a pre-defined key is used for encryption during data transmission. WPA applies Temporal Key Integrity Protocol (TKIP) for data encryption while WPA2 applies AES. The WPA-Enterprise combines not only encryption but also authentication.

Since WEP has been proved vulnerable, you may consider using WPA for the most secure connection. You should select the appropriate security mechanism according to your needs. No matter which security suite you select, they all will enhance the over-the-air data protection and /or privacy on your wireless network. The Vigor wireless router is very flexible and can support multiple secure connections with both WEP and WPA at the same time.

Separate the Wireless and the Wired LAN- WLAN Isolation enables you to isolate your wireless LAN from wired LAN for either quarantine or limit access reasons. To isolate means neither of the parties can access each other. To elaborate an example for business use, you may set up a wireless LAN for visitors only so they can connect to Internet without hassle of

the confidential information leakage. For a more flexible deployment, you may add filters of MAC addresses to isolate users' access from wired LAN.

Manage Wireless Stations - Station List will display all the station in your wireless network and the status of their connection.

Below shows the menu items for Wireless LAN.

4.13.2 General Setup

By clicking the **General Settings**, a new web page will appear so that you could configure the SSID and the wireless channel. Please refer to the following figure for more information.

Wireless LAN >> General Setup

General Setting (IEEE 802.11)

Enable Wireless LAN

Mode : Mixed(11b+11g+11n)

Index(1-15) in [Schedule](#) Setup: , , ,

Only schedule profiles that have the action "Force Down" are applied to the WLAN, all other actions are ignored.

| | Enable | Hide SSID | SSID | Isolate Member | Isolate VPN |
|---|--------------------------|--------------------------|---|--------------------------|--------------------------|
| 1 | <input type="checkbox"/> | <input type="checkbox"/> | DrayTek | <input type="checkbox"/> | <input type="checkbox"/> |
| 2 | <input type="checkbox"/> | <input type="checkbox"/> | | <input type="checkbox"/> | <input type="checkbox"/> |
| 3 | <input type="checkbox"/> | <input type="checkbox"/> | | <input type="checkbox"/> | <input type="checkbox"/> |
| 4 | <input type="checkbox"/> | <input type="checkbox"/> | | <input type="checkbox"/> | <input type="checkbox"/> |

Isolate Member: Wireless clients (stations) with the same SSID cannot access for each other.

Isolate VPN: isolate wireless with remote dial-in and LAN to LAN VPN.

Channel: Channel 6, 2437MHz Long Preamble:

Long Preamble: necessary for some old 802.11 b devices only(lower performance)

Packet-OVERDRIVE™

Tx Burst

Note:
The same technology must also be supported in clients to boost WLAN performance.

Rate Control

| | Enable | Upload | Download |
|--------|--------------------------|--|--|
| SSID 1 | <input type="checkbox"/> | 30000 kbps | 30000 kbps |

| SSID 3 | <input type="checkbox"/> | 30000 kbps | 30000 kbps |
| SSID 4 | <input type="checkbox"/> | 30000 kbps | 30000 kbps |

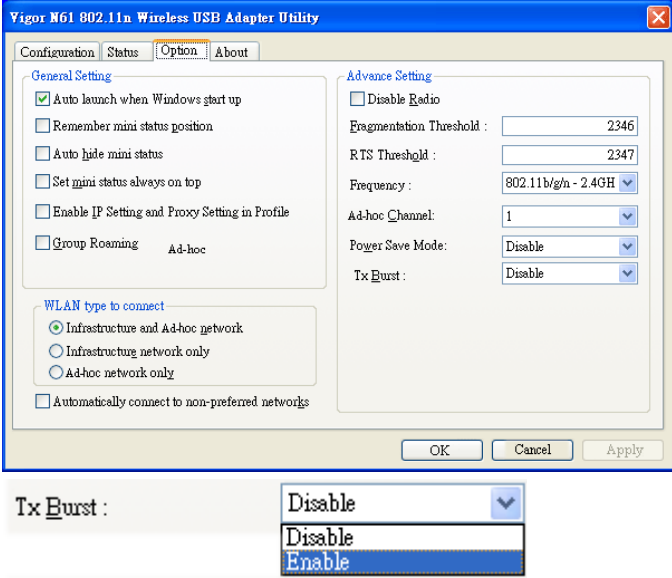

Note: range 100~50,000 kbps

OK Cancel

Available settings are explained as follows:

| Item | Description |
|----------------------------|--|
| Enable Wireless LAN | Check the box to enable wireless function. |
| Mode | At present, the router can connect to 11n Only, 11g Only, Mixed (11b+11g), Mixed (11a+11n), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mix (11b+11g+11n) mode. <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> Mixed(11b+11g+11n) <ul style="list-style-type: none"> 11g Only 11n Only Mixed(11b+11g) Mixed(11g+11n) Mixed(11a+11n) <li style="background-color: #e0e0e0;">Mixed(11b+11g+11n) </div> |
| Index(1-15) | Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules |

| Item | Description |
|-------------------------|--|
| | pre-defined in Applications >> Schedule setup. The default setting of this field is blank and the function will always work. |
| Hide SSID | Check it to prevent from wireless sniffing and make it harder for unauthorized clients or STAs to join your wireless LAN. Depending on the wireless utility, the user may only see the information except SSID or just cannot see any thing about Vigor wireless router while site surveying. The system allows you to set four sets of SSID for different usage. In default, the first set of SSID will be enabled. You can hide it for your necessity. |
| SSID | Means the identification of the wireless LAN. SSID can be any text numbers or various special characters. The default SSID is "DrayTek". We suggest you to change it. |
| Isolate | <p>VPN – Check this box to make the wireless clients (stations) with different VPN not accessing for each other.</p> <p>Member –Check this box to make the wireless clients (stations) with the same SSID not accessing for each other.</p> |
| Channel | <p>Means the channel of frequency of the wireless LAN. The default channel is 6. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.</p> <div data-bbox="687 1095 1128 1592" style="border: 1px solid black; padding: 5px;"> <p>Channel: Channel 6, 2437MHz ▾</p> <ul style="list-style-type: none"> Auto Channel 1, 2412MHz Channel 2, 2417MHz Channel 3, 2422MHz Channel 4, 2427MHz Channel 5, 2432MHz Channel 6, 2437MHz Channel 7, 2442MHz Channel 8, 2447MHz Channel 9, 2452MHz Channel 10, 2457MHz Channel 11, 2462MHz Channel 12, 2467MHz Channel 13, 2472MHz </div> |
| Long Preamble | This option is to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. Check it to use Long Preamble if needed to communicate with this kind of devices. |
| Packet-OVERDRIVE | This feature can enhance the performance in data transmission about 40%* more (by checking Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. That is, the wireless client must support this feature and invoke the |

| Item | Description |
|---------------------|--|
| | <p>function, too.</p> <p>Note: Vigor N61 wireless adapter supports this function. Therefore, you can use and install it into your PC for matching with Packet-OVERDRIVE (refer to the following picture of Vigor N61 wireless utility window, choose Enable for TxBURST on the tab of Option).</p>  <p>Note: * means the real transmission rate depends on the environment of the network.</p> |
| Rate Control | <p>It controls the data transmission rate through wireless connection.</p> <p>Upload – Check Enable and type the transmitting rate for data upload. Default value is 30,000 kbps.</p> <p>Download – Type the transmitting rate for data download. Default value is 30,000 kbps.</p> |

4.13.3 Security

This page allows you to set security with different modes for SSID 1, 2, 3 and 4 respectively. After configuring the correct settings, please click **OK** to save and invoke it.

The default security mode is **Mixed (WPA+WPA2)/PSK**. Default Pre-Shared Key (PSK) is provided and stated on the label pasted on the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

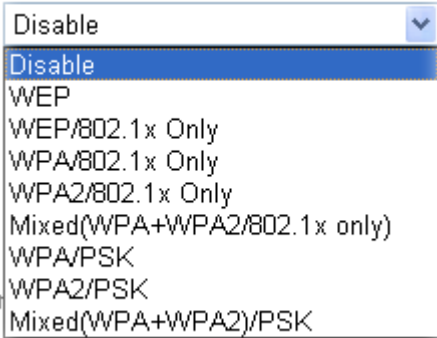

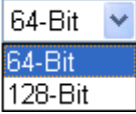

By clicking the **Security Settings**, a new web page will appear so that you could configure the settings of WEP and WPA.

[Wireless LAN >> Security Settings](#)

| SSID 1 | SSID 2 | SSID 3 | SSID 4 |

Available settings are explained as follows:

| Item | Description |
|--------------------|---|
| <p>Mode</p> | <p>There are several modes provided for you to choose.</p>  <p>Note: You should also set RADIUS Server simultaneously if 802.1x mode is selected.</p> <p>Disable - Turn off the encryption mechanism.</p> <p>WEP-Accepts only WEP clients and the encryption key should be entered in WEP Key.</p> <p>WEP/802.1x Only - Accepts only WEP clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA/802.1x Only- Accepts only WPA clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA2/802.1x Only- Accepts only WPA2 clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>Mixed (WPA+WPA2/802.1x only) - Accepts WPA and WPA2 clients simultaneously and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA/PSK-Accepts only WPA clients and the encryption key should be entered in PSK.</p> <p>WPA2/PSK-Accepts only WPA2 clients and the encryption key should be entered in PSK.</p> <p>Mixed (WPA+ WPA2)/PSK - Accepts WPA and WPA2 clients simultaneously and the encryption key should be entered in PSK.</p> |
| <p>WPA</p> | <p>The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication. Either 8~63 ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p> <p>Type - Select from Mixed (WPA+WPA2) or WPA2 only.</p> <p>Pre-Shared Key (PSK) - Either 8~63 ASCII characters, such as 012345678..(or 64 Hexadecimal digits leading by 0x, such</p> |

| Item | Description |
|------------|---|
| | as "0x321253abcde..."). |
| WEP | <p>64-Bit - For 64 bits WEP key, either 5 ASCII characters, such as 12345 (or 10 hexadecimal digitals leading by 0x, such as 0x4142434445.)</p> <p>128-Bit - For 128 bits WEP key, either 13 ASCII characters, such as ABCDEFGHIJKLM (or 26 hexadecimal digits leading by 0x, such as 0x4142434445464748494A4B4C4D).</p> <p>Encryption Mode: </p> <p>All wireless devices must support the same WEP encryption bit size and have the same key. Four keys can be entered here, but only one key can be selected at a time. The keys can be entered in ASCII or Hexadecimal. Check the key you wish to use.</p> |

4.13.4 Access Control

For additional security of wireless access, the **Access Control** facility allows you to restrict the network access right by controlling the wireless LAN MAC address of client. Only the valid MAC address that has been configured can access the wireless LAN interface. By clicking the **Access Control**, a new web page will appear, as depicted below, so that you could edit the clients' MAC addresses to control their access rights.

[Wireless LAN >> Access Control](#)

Access Control

| | (expressed by MAC addresses) listed in the box can be grouped under different wireless LAN. For example, they can be grouped under SSID 1 and SSID 2 at the same time if you check SSID 1 and SSID 2. |
| MAC Address Filter | Display all MAC addresses that are edited before. |
| Client's MAC Address | Manually enter the MAC address of wireless client. |
| Apply SSID | After entering the client's MAC address, check the box of the SSIDs desired to insert this MAC address into their access control list. |
| Attribute | s: Isolate the station from LAN - select to isolate the wireless connection of the wireless client of the MAC address from LAN. |
| Add | Add a new MAC address into the list. |
| Delete | Delete the selected MAC address in the list. |
| Edit | Edit the selected MAC address in the list. |
| Cancel | Give up the access control set up. |
| OK | Click it to save the access control list. |
| Clear All | Clean all entries in the MAC address list. |

4.13.5 WPS

WPS (Wi-Fi Protected Setup) provides easy procedure to make network connection between wireless station and wireless access point (vigor router) with the encryption of WPA and WPA2.

Note: Such function is available for the wireless station with WPS supported.

It is the simplest way to build connection between wireless network clients and vigor router. Users do not need to select any encryption mode and type any long encryption passphrase to setup a wireless client every time. He/she only needs to press a button on wireless client, and WPS will connect for client and router automatically.

There are two methods to do network connection through WPS between AP and Stations: pressing the **Start PBC** button or using **PIN Code**.

- On the side of Vigor 2920 series which served as an AP, press **WPS** button once on the front panel of the router or click **Start PBC** on web configuration interface. On the side of a station with network card installed, press **Start PBC** button of network card.

- If you want to use PIN code, you have to know the PIN code specified in wireless client. Then provide the PIN code of the wireless client you wish to connect to the vigor router.

For WPS is supported in WPA-PSK or WPA2-PSK mode, if you do not choose such mode in **Wireless LAN>>Security**, you will see the following message box.

Please click **OK** and go back **Wireless LAN>>Security** to choose WPA-PSK or WPA2-PSK mode and access WPS again.

Below shows **Wireless LAN>>WPS** web page.

Wireless LAN >> WPS (Wi-Fi Protected Setup)

Enable WPS

Wi-Fi Protected Setup Information

| | |
|---------------------|------------|
| WPS Status | Configured |
| SSID | DrayTek |
| Authentication Mode | Disable |

Device Configure

| | |
|------------------------------|---|
| Configure via Push Button | <input type="button" value="Start PBC"/> |
| Configure via Client PinCode | <input type="text"/> <input type="button" value="Start PIN"/> |

Status: The Authentication Mode is NOT WPA/WPA2 PSK!!

Note: WPS can help your wireless client automatically connect to the Access point.

: WPS is Disabled.

: WPS is Enabled.

: Waiting for WPS requests from wireless clients.

Available settings are explained as follows:

| Item | Description |
|------------|---------------------------------------|
| Enable WPS | Check this box to enable WPS setting. |

| Item | Description |
|-------------------------------------|--|
| WPS Status | Display related system information for WPS. If the wireless security (encryption) function of the router is properly configured, you can see 'Configured' message here. |
| SSID | Display the SSID1 of the router. WPS is supported by SSID1 only. |
| Authentication Mode | Display current authentication mode of the router. Only WPA2/PSK and WPA/PSK support WPS. |
| Configure via Push Button | Click Start PBC to invoke Push-Button style WPS setup procedure. The router will wait for WPS requests from wireless clients about two minutes. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes) |
| Configure via Client PinCode | Please input the PIN code specified in wireless client you wish to connect, and click Start PIN button. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes) |

4.13.6 WDS

WDS means Wireless Distribution System. It is a protocol for connecting two access points (AP) wirelessly. Usually, it can be used for the following application:

- Provide bridge traffic between two LANs through the air.
- Extend the coverage range of a WLAN.

To meet the above requirement, two WDS modes are implemented in Vigor router. One is **Bridge**, the other is **Repeater**. Below shows the function of WDS-bridge interface:

The application for the WDS-Repeater mode is depicted as below:

The major difference between these two modes is that: while in **Repeater** mode, the packets received from one peer AP can be repeated to another peer AP through WDS links. Yet in **Bridge** mode, packets received from a WDS link will only be forwarded to local wired or wireless hosts. In other words, only Repeater mode can do WDS-to-WDS packet forwarding.

In the following examples, hosts connected to Bridge 1 or 3 can communicate with hosts connected to Bridge 2 through WDS links. However, hosts connected to Bridge 1 CANNOT communicate with hosts connected to Bridge 3 through Bridge 2.

Click **WDS** from **Wireless LAN** menu. The following page will be shown.

WDS Settings
[Set to Factory Default](#)

Mode: Disable ▾

Security:

Disable WEP Pre-shared Key

WEP:

Use the same WEP key set in [Security Settings](#).

Pre-shared Key:

Type:

DrayTek WPA WPA WPA2

Key :

Type 8~63 ASCII characters or 64 hexadecimal digits leading by "0x", for example "cfigs01a2..." or "0x655abcd....".

Bridge

Enable

| | |
|--------------------------|---|
| <input type="checkbox"/> | Peer MAC Address |
| <input type="checkbox"/> | <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> |

Note: Disable unused links to get better performance.

Repeater

| <input type="checkbox"/> | <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> |

Access Point Function:

Enable Disable

Status:

Send "Hello" message to peers.

Note: The status is valid only when the peer also supports this function.

Available settings are explained as follows:

| Item | Description |
|-----------------------|---|
| Mode | Choose the mode for WDS setting. Disable mode will not invoke any WDS setting. Bridge mode is designed to fulfill the first type of application. Repeater mode is for the second one.  |
| Security | There are three types for security, Disable , WEP and Pre-shared key . The setting you choose here will make the following WEP or Pre-shared key field valid or not. Choose one of the types for the router. |
| WEP | Check this box to use the same key set in Security Settings page. If you did not set any key in Security Settings page, this check box will be dimmed. |
| Pre-shared Key | Type – There are some types for you to choose. WPA and WPA2 are used for WDS devices (e.g.2920n wireless router, you can set the encryption mode as WPA or WPA2 to establish your WDS system between AP and the router. |

| Item | Description |
|------------------------------|---|
| | Key - Type 8 ~ 63 ASCII characters or 64 hexadecimal digits leading by "0x". |
| Bridge | If you choose Bridge as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Yet please disable the unused link to get better performance. If you want to invoke the peer MAC address, remember to check Enable box in the front of the MAC address after typing. |
| Repeater | If you choose Repeater as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Similarly, if you want to invoke the peer MAC address, remember to check Enable box in the front of the MAC address after typing. |
| Access Point Function | Click Enable to make this router serving as an access point; click Disable to cancel this function. |
| Status | It allows user to send "hello" message to peers. Yet, it is valid only when the peer also supports this function. |

4.13.7 Advanced Setting

This page allows users to set advanced settings such as operation mode, channel bandwidth, guard interval, and aggregation MSDU for wireless data transmission.

Wireless LAN >> Advanced Setting

HT Physical Mode

| | |
|--------------------------|---|
| Operation Mode | <input checked="" type="radio"/> Mixed Mode <input type="radio"/> Green Field |
| Channel Bandwidth | <input type="radio"/> 20 <input checked="" type="radio"/> 20/40 |
| Guard Interval | <input type="radio"/> long <input checked="" type="radio"/> auto |
| Aggregation MSDU(A-MSDU) | <input type="radio"/> Disable <input checked="" type="radio"/> Enable |

OK

Available settings are explained as follows:

| Item | Description |
|--------------------------|---|
| Operation Mode | <p>Mixed Mode – the router can transmit data with the ways supported in both 802.11a/b/g and 802.11n standards. However, the entire wireless transmission will be slowed down if 802.11g or 802.11b wireless client is connected.</p> <p>Green Field – to get the highest throughput, please choose such mode. Such mode can make the data transmission happening between 11n systems only. In addition, it does not have protection mechanism to avoid the conflict with neighboring devices of 802.11a/b/g.</p> |
| Channel Bandwidth | <p>20- the router will use 20Mhz for data transmission and receiving between the AP and the stations.</p> <p>20/40 – the router will use 20Mhz or 40Mhz for data transmission and receiving according to the station capability. Such channel can increase the performance for data transit.</p> |
| Guard Interval | It is to assure the safety of propagation delays and reflections for the sensitive digital data. If you choose auto as guard interval, the AP router will choose short guard interval (increasing the wireless performance) or long guard interval for data transmit based on the station capability. |
| Aggregation MSDU | Aggregation MSDU can combine frames with different sizes. It is used for improving MAC layer's performance for some brand's clients. The default setting is Enable . |

4.13.8 WMM Configuration

WMM is an abbreviation of Wi-Fi Multimedia. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs). The categories are designed with specific types of traffic, voice, video, best effort and low priority data. There are four accessing categories - AC_BE , AC_BK, AC_VI and AC_VO for WMM.

APSD (automatic power-save delivery) is an enhancement over the power-save mechanisms supported by Wi-Fi networks. It allows devices to take more time in sleeping state and consume less power to improve the performance by minimizing transmission latency.

WMM Parameters of Access Point

| | Aifsn | CWMin | CWMax | Txop | ACM | AckPolicy |
|-------|--------------------------------|--------------------------------|---------------------------------|---------------------------------|--------------------------|--------------------------|
| AC_BE | <input type="text" value="3"/> | <input type="text" value="4"/> | <input type="text" value="6"/> | <input type="text" value="0"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| AC_BK | <input type="text" value="7"/> | <input type="text" value="4"/> | <input type="text" value="10"/> | <input type="text" value="0"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| AC_VI | <input type="text" value="1"/> | <input type="text" value="3"/> | <input type="text" value="4"/> | <input type="text" value="94"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| AC_VO | <input type="text" value="1"/> | <input type="text" value="2"/> | <input type="text" value="3"/> | <input type="text" value="47"/> | <input type="checkbox"/> | <input type="checkbox"/> |

WMM Parameters of Station

| | Aifsn | CWMin | CWMax | Txop | ACM |
|-------|--------------------------------|--------------------------------|---------------------------------|---------------------------------|--------------------------|
| AC_BE | <input type="text" value="3"/> | <input type="text" value="4"/> | <input type="text" value="10"/> | <input type="text" value="0"/> | <input type="checkbox"/> |
| AC_BK | <input type="text" value="7"/> | <input type="text" value="4"/> | <input type="text" value="10"/> | <input type="text" value="0"/> | <input type="checkbox"/> |
| AC_VI | <input type="text" value="2"/> | <input type="text" value="3"/> | <input type="text" value="4"/> | <input type="text" value="94"/> | <input type="checkbox"/> |
| AC_VO | <input type="text" value="2"/> | <input type="text" value="2"/> | <input type="text" value="3"/> | <input type="text" value="47"/> | <input type="checkbox"/> |

Available settings are explained as follows:

| Item | Description |
|---------------------|--|
| WMM Capable | To apply WMM parameters for wireless data transmission, please click the Enable radio button. |
| APSD Capable | The default setting is Disable . |
| Aifsn | It controls how long the client waits for each data transmission. Please specify the value ranging from 1 to 15. Such parameter will influence the time delay for WMM accessing categories. For the service of voice or video image, please set small value for AC_VI and AC_VO categories For the service of e-mail or web browsing, please set large value for AC_BE and AC_BK categories. |
| CWMin/CWMax | CWMin means contention Window-Min and CWMax means contention Window-Max. Please specify the value ranging from 1 to 15. Be aware that CWMax value must be greater than CWMin or equals to CWMin value. Both values will influence the time delay for WMM accessing categories. The difference between AC_VI and AC_VO categories must be |

| Item | Description |
|------------------|--|
| | smaller; however, the difference between AC_BE and AC_BK categories must be greater. |
| Txop | It means transmission opportunity. For WMM categories of AC_VI and AC_VO that need higher priorities in data transmission, please set greater value for them to get highest transmission opportunity. Specify the value ranging from 0 to 65535. |
| ACM | It is an abbreviation of Admission control Mandatory. It can restrict stations from using specific category class if it is checked. Note: Vigor2920 provides standard WMM configuration in the web page. If you want to modify the parameters, please refer to the Wi-Fi WMM standard specification. |
| AckPolicy | “Uncheck” (default value) the box means the AP router will answer the response request while transmitting WMM packets through wireless connection. It can assure that the peer must receive the WMM packets. “Check” the box means the AP router will not answer any response request for the transmitting packets. It will have better performance with lower reliability. |

4.13.9 AP Discovery

Vigor router can scan all regulatory channels and find working APs in the neighborhood. Based on the scanning result, users will know which channel is clean for usage. Also, it can be used to facilitate finding an AP for a WDS link. Notice that during the scanning process (about 5 seconds), no client is allowed to connect to Vigor.

This page is used to scan the existence of the APs on the wireless LAN. Yet, only the AP which is in the same channel of this router can be found. Please click **Scan** to discover all the connected APs.

[Wireless LAN >> Access Point Discovery](#)

Access Point List

| BSSID | Channel | SSID |

4.13.10 Station List

Station List provides the knowledge of connecting wireless clients now along with its status code. There is a code summary below for explanation. For convenient **Access Control**, you can select a WLAN station and click **Add to Access Control** below.

[Wireless LAN >> Station List](#)

Station List

| Status | MAC Address | Associated with |
|--------|-------------|-----------------|
| | | |

Status Codes :
C: Connected, No encryption.
E: Connected, WEP.
P: Connected, WPA.
A: Connected, WPA2.
B: Blocked by Access Control.
N: Connecting.
F: Fail to pass WPA/PSK authentication.

Note: After a station connects to the router successfully, it may be turned off without notice. In that case, it will still be on the list until the connection expires.

Add to Access Control :

Client's MAC address : : : : :

Available settings are explained as follows:

| Item | Description |
|----------------|---|
| Refresh | Click this button to refresh the status of station list. |
| Add | Click this button to add current typed MAC address into Access Control . |

4.14 USB Application

USB storage disk connected on Vigor router can be regarded as a server. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications. After setting the configuration in **USB Application**, you can type the IP address of the Vigor router and username/password created in **USB Application>>USB User Management** on the client software. Then, the client can use the FTP site (USB storage disk) or share the Samba service through Vigor router.

4.14.1 USB General Settings

This page will determine the number of concurrent FTP connection, default charset for FTP server and enable Samba service. At present, the Vigor router can support USB storage disk with formats of FAT16 and FAT32 only. Therefore, before connecting the USB storage disk into the Vigor router, please make sure the memory format for the USB storage disk is FAT16 or FAT32. It is recommended for you to use FAT32 for viewing the filename completely (FAT16 cannot support long filename).

| Access Rule | |
| File | <input type="checkbox"/> Read <input type="checkbox"/> Write <input type="checkbox"/> Delete |
| Directory | <input type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove |

Note: The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () / and space.

Available settings are explained as follows:

| Item | Description |
|-------------------------|---|
| FTP/Samba User | <p>Enable – Click this button to activate this profile (account) for FTP service or Samba User service. Later, the user can use the username specified in this page to login into FTP server.</p> <p>Disable – Click this button to disable such profile.</p> |
| Username | <p>Type the username for FTP/Samba users for accessing into FTP server (USB storage disk). Be aware that users cannot access into USB storage disk in anonymity. Later, you can open FTP client software and type the username specified here for accessing into USB storage disk.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: “Admin” could not be typed here as username, for the word is specified for accessing into web pages of Vigor router only. Also, it is reserved for FTP firmware upgrade usage.</p> <p>Note: FTP Passive mode is not supported by Vigor Router.</p> <p>Please disable that mode on the FTP client.</p> </div> |
| Password | Type the password for FTP/Samba users for accessing FTP server. Later, you can open FTP client software and type the password specified here for accessing into USB storage disk. |
| Confirm Password | Type the password again to make confirmation. |
| Home Folder | It determines the folder for the client to access into. The user can enter a directory name in this field. Then, after clicking OK , the router will create the specific/new folder in |

| Item | Description |
|---------------------------|---|
| | <p>the USB storage disk. In addition, if the user types “/” here, he/she can access into all of the disk folders and files in USB storage disk.</p> <p>Note: When write protect status for the USB storage disk is ON, you cannot type any new folder name in this field. Only “/” can be used in such case.</p> <p>You can click  to open the following dialog to add any new folder which can be specified as the Home Folder.</p>  |
| <p>Access Rule</p> | <p>It determines the authority for such profile. Any user, who uses such profile for accessing into USB storage disk, must follow the rule specified here.</p> <p>File – Check the items (Read, Write and Delete) for such profile.</p> <p>Directory –Check the items (List, Create and Remove) for such profile.</p> |

Before you click **OK**, you have to insert a USB storage disk into the USB interface of the Vigor router. Otherwise, you cannot save the configuration.

4.14.3 File Explorer

File Explorer offers an easy way for users to view and manage the content of USB storage disk connected on Vigor router.

[USB Application >> File Explorer](#)

File Explorer

 Current Path: /

| Name | Size | Delete | Rename |
|------|------|--------|--------|
| | | | |

Upload File

Select a file:

Note: The folder can not be deleted when it is not empty.

Available settings are explained as follows:

| Item | Description |
|--|--|
|  Refresh | Click this icon to refresh files list. |
|  Back | Click this icon to return to the upper directory. |
|  Create | Click this icon to add a new folder. |
| Current Path | Display current folder. |
| Upload | Click this button to upload the selected file to the USB storage disk. The uploaded file in the USB storage disk can be shared for other user through FTP. |

4.14.4 USB Disk Status

This page is to monitor the status for the users who accessing into FTP or Samba server (USB storage disk) via the Vigor router. If you want to remove the storage disk from USB port in router, please click **Disconnect USB Disk** first. And then, remove the USB storage disk later.

[USB Application >> USB Disk Status](#)

USB Mass Storage Device Status

Connection Status: No Disk Connected [Disconnect USB Disk](#)

Disk Capacity: 0 MB

Free Capacity: 0 MB [Refresh](#)

USB Disk Users Connected | [Refresh](#) |

| Index | Service | IP Address(Port) | Username |
|-------|---------|------------------|----------|
| | | | |

Note: If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Each item is explained as follows:

| Item | Description |
|--------------------------|---|
| Connection Status | If there is no USB storage disk connected to Vigor router, “ No Disk Connected ” will be shown here. |
| Disk Capacity | Display the total capacity of the USB storage disk. |
| Free Capacity | Display the free space of the USB storage disk. Click Refresh at any time to get new status for free capacity. |
| Index | Display the number of the client which connecting to FTP server. |
| IP Address | Display the IP address of the user’s host which connecting to the FTP server. |
| Username | Display the username that user uses to login to the FTP server. |

When you insert USB storage disk into the Vigor router, the system will start to find out such device within several seconds.

4.14.5 Syslog Explorer

Such page provides real-time syslog and displays the information on the screen.

For Web Syslog

Available parameters are explained as follows:

| Item | Description |
|--------------------------|---|
| Enable Web Syslog | Check this box to enable the function of Web Syslog. |
| Syslog Type | Use the drop down list to specify a type of Syslog to be displayed. <div style="border: 1px solid #ccc; padding: 5px; width: fit-content;"> User User Firewall Call WAN VPN All </div> |
| Display Mode | There are two modes for you to choose. <div style="border: 1px solid #ccc; padding: 5px; width: fit-content;"> Stop record when fulls Stop record when fulls Always record the new event </div> <p>Stop record when fulls – when the capacity of syslog is full, the system will stop recording.</p> <p>Always record the new event – only the newest events will be recorded by the system.</p> |
| Time | Display the time of the event occurred. |
| Message | Display the information for each event. |

For USB Syslog

This page displays the syslog recorded on the USB storage disk.

[USB Application >> Syslog Explorer](#)

[Web Syslog](#) [USB Syslog](#)

Note:The syslog will show while the saved syslog file size is over 1MB.

Folder: n/a File: n/a Page: n/a Log Type: n/a

| Time | Log Type | Message |
|------|----------|---------|
|------|----------|---------|

Each item is explained as follows:

| Item | Description |
|----------|---|
| Time | Display the time of the event occurred. |
| Log Type | Display the type of the record. |
| Message | Display the information for each event. |

4.15 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: System Status, HTTPS Encryption Setup, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog/Mail Alert, Time and Date, SNMP, Management, Reboot System, Firmware Upgrade and Activation.

Below shows the menu items for System Maintenance.

4.15.1 System Status

The **System Status** provides basic network settings of Vigor router. It includes LAN and WAN interface information. Also, you could get the current running firmware version or firmware related information from this presentation.

| IP Routed Subnet | 00-50-7F-CD-07-48 | 192.168.0.1 | 255.255.255.0 | Yes | 168.95.1.1 |

| Wireless LAN | | | |
|-------------------|------------------|------------------|---------|
| MAC Address | Frequency Domain | Firmware Version | SSID |
| 00-50-7F-CD-07-48 | Europe | 2.3.2.0 | DrayTek |

| WAN | | | | | |
|------|--------------|-------------------|------------|--------------|-----------------|
| | Link Status | MAC Address | Connection | IP Address | Default Gateway |
| WAN1 | Connected | 00-50-7F-CD-07-49 | Static IP | 172.16.3.130 | 172.16.1.1 |
| WAN2 | Disconnected | 00-50-7F-CD-07-4A | --- | --- | --- |
| WAN3 | Disconnected | 00-50-7F-CD-07-4B | USB | --- | --- |

| IPv6 | | |
|--------------------------------|-------|----------------------|
| Address | Scope | Internet Access Mode |
| LAN FE80::250:7FFF:FECD:748/64 | Link | --- |

Each item is explained as follows:

| Item | Description |
|------------|---------------------------------------|
| Model Name | Display the model name of the router. |

| Item | Description |
|-------------------------|---|
| Firmware Version | Display the firmware version of the router. |
| Build Date/Time | Display the date and time of the current firmware build. |
| LAN | <p>MAC Address - Display the MAC address of the LAN Interface.</p> <p>IP Address - Display the IP address of the LAN interface.</p> <p>Subnet Mask - Display the subnet mask address of the LAN interface.</p> <p>DHCP Server - Display the current status of DHCP server of the LAN interface</p> <p>DNS - Display the assigned IP address of the primary DNS.</p> |
| Wireless LAN | <p>MAC Address - Display the MAC address of the wireless LAN.</p> <p>Frequency Domain - It can be Europe (13 usable channels), USA (11 usable channels) etc. The available channels supported by the wireless products in different countries are various.</p> <p>Firmware Version - It indicates information about equipped WLAN miniPCi card. This also helps to provide availability of some features that are bound with some WLAN miniPCi.</p> <p>SSID - Display the SSID of the router.</p> |
| WAN | <p>Link Status - Display current connection status.</p> <p>MAC Address - Display the MAC address of the WAN Interface.</p> <p>Connection - Display the connection type.</p> <p>IP Address - Display the IP address of the WAN interface.</p> <p>Default Gateway - Display the assigned IP address of the default gateway.</p> |
| IPv6 | <p>Address - Display the IPv6 address for LAN.</p> <p>Scope - Display the scope of IPv6 address. For example, IPv6 Link Local could only be used for direct IPv6 link. It can't be used for IPv6 internet.</p> <p>Internet Access Mode – Display the connection mode chosen for accessing into Internet.</p> |
| VoIP | <p>Profile - Display the VoIP profile for the phone port.</p> <p>In/Out</p> |

| Item | Description |
|------|--|
| | - Display the number of incoming /outgoing phone call. |

4.15.2 HTTPS Encryption Setup

The encryption methods configured in this page would influence the access of HTTP web site and the encryption algorithm used by SSL Tunnel.

System Maintenance >> HTTPS Encryption Setup

Encryption Key Algorithm

High - AES(128 bits) and 3DES
 Default - RC4(128 bits)
 Low - DES

Available parameters are explained as follows:

| Item | Description |
|----------------|---|
| High | Choose this option to have high security. |
| Default | If you have no idea of this setting, simply use the default setting as HTTPS encryption mode. |
| Low | Choose this option to have high performance. |

4.15.3 TR-069

This device supports TR-069 standard. It is very convenient for an administrator to manage a TR-069 device through an Auto Configuration Server, e.g., VigorACS.

System Maintenance >> TR-069 Setting

ACS and CPE Settings

ACS Server On:

ACS Server

URL:

Username:

Password:

CPE Client

Enable Disable

URL:

Port:

Username:

Password:

Periodic Inform Settings

Disable Enable

Interval Time: second(s)

STUN Settings

Disable Enable

Server IP:

Server Port:

Minimum Keep Alive Period: second(s)

Maximum Keep Alive Period: second(s)

Available parameters are explained as follows:

| Item | Description |
|---------------------------------|---|
| ACS Server On | Choose the interface for the router connecting to ACS server. |
| ACS Server | URL/Username/Password – Such data must be typed according to the ACS (Auto Configuration Server) you want to link. Please refer to Auto Configuration Server user’s manual for detailed information. |
| CPE Client | Such information is useful for Auto Configuration Server. Enable/Disable – Allow/Deny the CPE Client to connect with Auto Configuration Server. Port – Sometimes, port conflict might be occurred. To solve such problem, you might change port number for CPE. |
| Periodic Inform Settings | The default setting is Enable . Please set interval time or schedule time for the router to send notification to CPE. Or click Disable to close the mechanism of notification. |
| STUN Settings | The default is Disable . If you click Enable , please type the relational settings listed below: Server IP – Type the IP address of the STUN server. |

| Item | Description |
|------|--|
| | <p>Server Port – Type the port number of the STUN server.</p> <p>Minimum Keep Alive Period – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the minimum period. The default setting is “60 seconds”.</p> <p>Maximum Keep Alive Period – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the maximum period. A value of “-1” indicates that no maximum period is specified.</p> |

4.15.4 Administrator Password

This page allows you to set new password.

[System Maintenance >> Administrator Password Setup](#)

Administrator Password

| | |
|------------------|----------------------|
| Old Password | <input type="text"/> |
| New Password | <input type="text"/> |
| Confirm Password | <input type="text"/> |

Note: Password can contain only a-z A-Z 0-9 , ; : " < > * + = \ | ? @ # ^ ! ()

Available parameters are explained as follows:

| Item | Description |
|-------------------------|---|
| Old Password | Type in the old password. The factory default setting for password is “ admin ”. |
| New Password | Type in new password in this field. |
| Confirm Password | Type in the new password again. |

When you click **OK**, the login window will appear. Please use the new password to access into the web user interface again.

4.15.5 User Password

Sometimes, you may want to access into User Mode to configure the web settings for some reason. Vigor router allows you to set new user password to login into the WUI to fit your request. Simply open **System Maintenance>>User Password**.

System Maintenance >> User Password

Enable User Mode for simple web configuration

User Password

| | |
|------------------|----------------------|
| Password | <input type="text"/> |
| Confirm Password | <input type="text"/> |

Note:Password can contain only a-z A-Z 0-9 , ; : " < > * + = \ | ? @ # ^ ! ()

OK

Available parameters are explained as follows:

| Item | Description |
|--|---|
| Enable User Mode for simple web configuration | Check this box to enable user mode operation. If you do not check this box, you cannot access into the user mode operation even if you enter user password in login page. |
| Password | Type in new password in this field. |
| Confirm Password | Type in the new password again. |

When you click **OK**, the login window will appear. Please use the new password to access into the web user interface again.

Below shows an example for accessing into User Operation with User Password.

1. Open **System Maintenance>>User Password**.
2. Check the box of **Enable User Mode for simple web configuration** to enable user mode operation. Type a new password in the field of New Password and click **OK**.

System Maintenance >> User Password

Enable User Mode for simple web configuration

User Password

[Set to Factory Default](#)

| | |
|------------------|--------------------------|
| Password | <input type="password"/> |
| Confirm Password | <input type="password"/> |

Note:Password can contain only a-z A-Z 0-9 , ; : " < > * + = \ | ? @ # ^ ! ()

OK

3. The following screen will appear. Simply click **OK**.

System Maintenance >> User Password

Active Configuration

| | |
|----------|---------|
| Password | : ***** |
|----------|---------|

4. Log out Vigor router Web user interface.

5. The following window will be open to ask for username and password. Type the new user password in the field of **Password** and click **Login**.

A login window with a light gray background and rounded corners. It has two input fields: "Username" and "Password". The "Password" field contains three black dots. To the right of the "Password" field is a "Login" button. At the bottom, there is a red bar with the text "Copyright©, DrayTek Corp. All Rights Reserved." and the "DrayTek" logo.

6. The main screen with User Mode will be shown as follows.

| LAN FE80::250:7FFF:FECD:748/64 | Link | --- |

Settings to be configured in User Mode will be less than settings in Admin Mode. Only basic configuration settings will be available in User Mode.

Setting in User Mode can be configured as same as in Admin Mode.

4.15.6 Login Page Greeting

When you want to access into the web user interface of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify background message and the heading on the Login window if you have such requirement.

[System Maintenance >> Login Page Greeting](#)

Login Page Greeting

Enable

Login Page Title (31 char max.)

Welcome Message and Bulletin (Max 511 characters) [Preview](#) | [Set to Factory Default](#) |

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>This welcome message is displayed in the Login page of the router. Replace this text with your own message. </p><ol><li>The welcome message can be written in HTML so lists such as this one can be created </li><li>Other markup tags such as p, font or img can be used</li></ol>
```

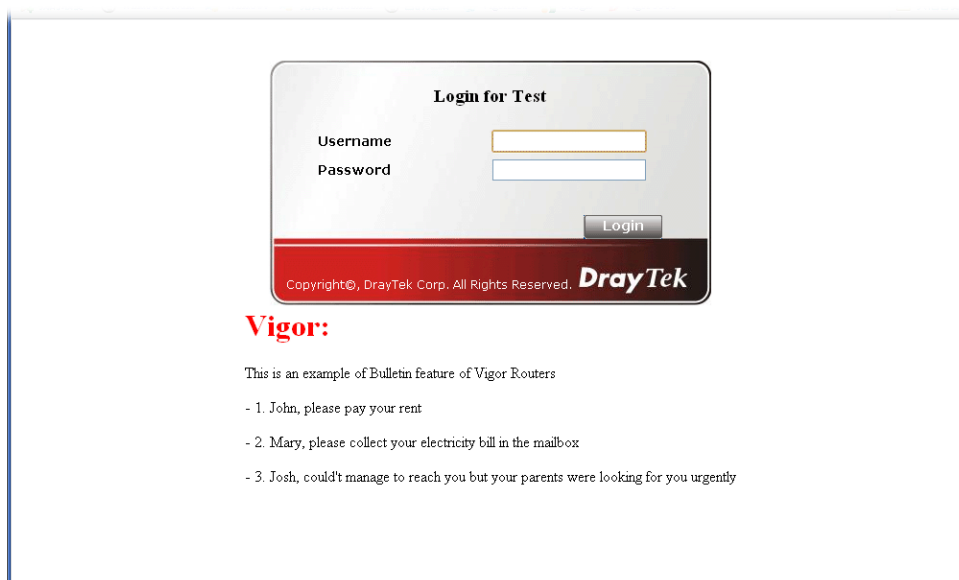

Examples of Welcome Message and Bulletin:

```
<h1><b><font color=red>Welcome Message</font></b></h1>
<p>Message</p>
```

Available settings are explained as follows:

| Item | Description |
|-------------------------------------|---|
| Enable | Check this box to enable the login customization function. |
| Login Page Title | Type a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog. |
| Welcome Message and Bulletin | Type words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not type URL redirect link here. |
| Preview | Click it to display the preview of the login window based on the settings on this web page. |
| Set to Factory Default | Click to return to the factory default setting. |

Below shows an example of login customization with the information typed in Login Description and Bulletin.

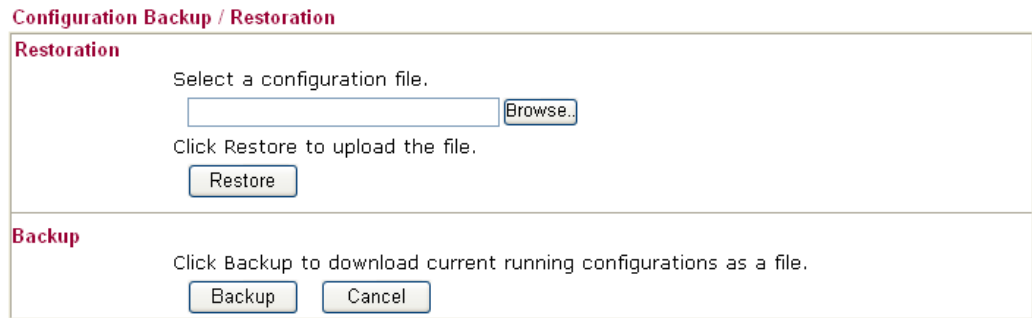

4.15.7 Configuration Backup

Backup the Configuration

Follow the steps below to backup your configuration.

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

System Maintenance >> Configuration Backup

2. Click **Backup** button to get into the following dialog. Click **Save** button to open another dialog for saving configuration as a file.

3. In **Save As** dialog, the default filename is **config.cfg**. You could give it another name by yourself.

4. Click **Save** button, the configuration will download automatically to your computer as a file named **config.cfg**.

The above example is using **Windows** platform for demonstrating examples. The **Mac** or **Linux** platform will appear different windows, but the backup function is still available.

Note: Backup for Certification must be done independently. The Configuration Backup does not include information of Certificate.

Restore Configuration

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

Restoration

Select a configuration file.

Click Restore to upload the file.

Backup

Click Backup to download current running configurations as a file.

2. Click **Browse** button to choose the correct configuration file for uploading to the router.
3. Click **Restore** button and wait for few seconds, the following picture will tell you that the restoration procedure is successful.

4.15.8 Syslog/Mail Alert

SysLog function is provided for users to monitor router. There is no bother to directly get into the Web user interface of the router or borrow debug equipments.

System Maintenance >> SysLog / Mail Alert Setup

SysLog / Mail Alert Setup

SysLog Access Setup

Enable

Syslog Save to:

Syslog Server

USB Disk

Router Name

Server IP Address

Destination Port

Enable syslog message:

Firewall Log

VPN Log

User Access Log

Call Log

WAN Log

Router/DSL information

AlertLog Setup

Enable

AlertLog Port

Mail Alert Setup

Enable

SMTP Server

SMTP Port

Mail To

Return-Path

Authentication

User Name

Password

Enable E-Mail Alert:

DoS Attack

IM-P2P

Available parameters are explained as follows:

| Item | Description |
|----------------------------|---|
| SysLog Access Setup | Enable - Check Enable to activate function of syslog. |

| | |
|-------------------------|---|
| | <p>Syslog Save to – Check Syslog Server to save the log to Syslog server.</p> <p>Check USB Disk to save the log to the attached USB storage disk.</p> |
| Router Name | <p>Display the name for such router configured in System Maintenance>>Management.</p> <p>If there is no name here, simply lick the link to access into System Maintenance>>Management to set the router name.</p> <p>Server IP Address -The IP address of the Syslog server.</p> <p>Destination Port - Assign a port for the Syslog protocol.</p> <p>Mail Syslog – Check the box to recode the mail event on Syslog.</p> <p>Enable syslog message - Check the box listed on this web page to send the corresponding message of firewall, VPN, User Access, Call, WAN, Router/DSL information to Syslog.</p> |
| AlertLog Setup | <p>Check “Enable” to activate function of alert log.</p> <p>AlertLog Port - Type the port number for alert log. The default setting is 514.</p> |
| Mail Alert Setup | <p>Check “Enable” to activate function of mail alert.</p> <p>Send a test e-mail - Make a simple test for the e-mail address specified in this page. Please assign the mail address first and click this button to execute a test for verify the mail address is available or not.</p> <p>SMTP Server - The IP address of the SMTP server.</p> <p>Mail To - Assign a mail address for sending mails out.</p> <p>Return-Path - Assign a path for receiving the mail from outside.</p> <p>Authentication - Check this box to activate this function while using e-mail application.</p> <p>User Name - Type the user name for authentication.</p> <p>Password - Type the password for authentication.</p> <p>Enable E-mail Alert - Check the box to send alert message to the e-mail box while the router detecting the item(s) you specify here.</p> |

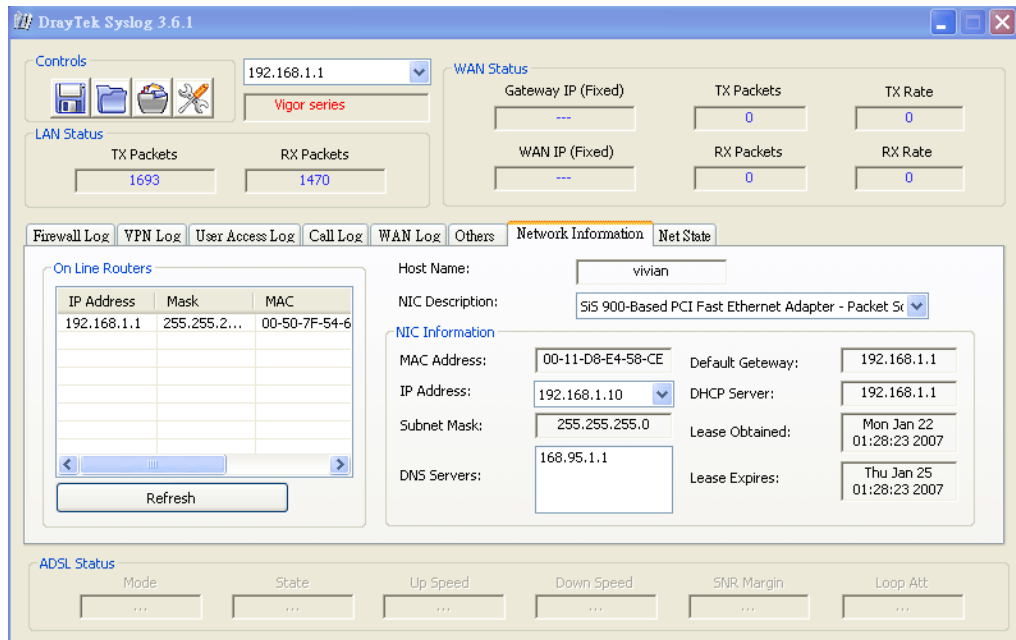

Click **OK** to save these settings.

For viewing the Syslog, please do the following:

1. Just set your monitor PC’s IP address in the field of Server IP Address
2. Install the Router Tools in the **Utility** within provided CD. After installation, click on the **Router Tools>>Syslog** from program menu.

- From the Syslog screen, select the router you want to monitor. Be reminded that in **Network Information**, select the network adapter used to connect to the router. Otherwise, you won't succeed in retrieving information from the router.

4.15.9 Time and Date

It allows you to specify where the time of the router should be inquired from.

System Maintenance >> Time and Date

Time Information

| | | |
|---------------------|---------------------------|--------------|
| Current System Time | 2010 Apr 2 Fri 9 : 1 : 58 | Inquire Time |
|---------------------|---------------------------|--------------|

Time Setup

| | |
|----------------------------------|------------------------------------|
| <input type="radio"/> | Use Browser Time |
| <input checked="" type="radio"/> | Use Internet Time Client |
| Server IP Address | pool.ntp.org |
| Time Zone | (GMT) Greenwich Mean Time : Dublin |
| Enable Daylight Saving | <input type="checkbox"/> |
| Automatically Update Interval | 30 min |

OK Cancel

Available parameters are explained as follows:

| Item | Description |
|------|-------------|
|------|-------------|

| Item | Description |
|--------------------------------------|---|
| Current System Time | Click Inquire Time to get the current time. |
| Use Browser Time | Select this option to use the browser time from the remote administrator PC host as router's system time. |
| Use Internet Time | Select to inquire time information from Time Server on the Internet using assigned protocol. |
| Time Protocol | Select a time protocol. |
| Server IP Address | Type the IP address of the time server. |
| Time Zone | Select the time zone where the router is located. |
| Enable Daylight Saving | Check the box to enable the daylight saving. Such feature is available for certain area. |
| Automatically Update Interval | Select a time interval for updating from the NTP server. |

Click **OK** to save these settings.

4.15.10 SNMP

This page allows you to configure settings for SNMP and SNMPV3 services.

The SNMPv3 is **more secure than** SNMP through the encryption method (support AES and DES) and authentication method (support MD5 and SHA) for the management needs.

[Applications >> SNMP](#)

Auth Algorithm

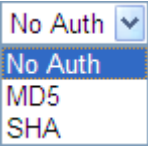

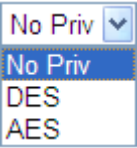

Auth Password

Privacy Algorithm

Privacy Password

Available settings are explained as follows:

| Item | Description |
|------|-------------|
|------|-------------|

| | |
|------------------------------------|---|
| Enable SNMP Agent | Check it to enable this function. |
| Get Community | Set the name for getting community by typing a proper character. The default setting is public . |
| Set Community | Set community by typing a proper name. The default setting is private . |
| Manager Host IP (IPv4) | Set one host as the manager to execute SNMP function. Please type in IPv4 address to specify certain host. |
| Manager Host IP (IPv6) | Set one host as the manager to execute SNMP function. Please type in IPv6 address to specify certain host. |
| Trap Community | Set trap community by typing a proper name. The default setting is public . |
| Notification Host IP (IPv4) | Set the IPv4 address of the host that will receive the trap community. |
| Notification Host IP (IPv6) | Set the IPv6 address of the host that will receive the trap community. |
| Trap Timeout | The default setting is 10 seconds. |
| Enable SNMPV3 Agent | Check it to enable this function. |
| USM User | USM means user-based security mode. Type a username which will be used for authentication. |
| Auth Algorithm | Choose one of the encryption methods listed below as the authentication algorithm.  |
| Auth Password | Type a password for authentication. |
| Privacy Algorithm | Choose one of the methods listed below as the privacy algorithm.  |
| Privacy Password | Type a password for privacy. |

Click **OK** to save these settings.

4.15.11 Management

This page allows you to manage the settings for access control, access list, port setup, and SMP setup. For example, as to management access control, the port number is used to send/receive SIP message for building a session.

The management pages for IPv4 and IPv6 protocols are different.

For IPv4

[System Maintenance >> Management](#)

Available settings are explained as follows:

| Item | Description |
|----------------------------------|---|
| Management Access Control | <p>Enable the checkbox to allow system administrators to login from the Internet. There are several servers provided by the system to allow you managing the router from Internet. Check the box(es) to specify.</p> <p>Enable PING from the Internet - Check the checkbox to enable all PING packets from the Internet. For security issue, this function is disabled by default.</p> |
| Access List | <p>You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed.</p> <p>IPv6 Address /Prefix Length- Indicate the IP address(es) allowed to login to the router.</p> |

4.15.12 Reboot System

The Web user interface may be used to restart your router. Click **Reboot System** from **System Maintenance** to open the following page.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

- Using current configuration
- Using factory default configuration

Reboot Now

Auto Reboot Time Schedule

Index(1-15) in **Schedule** Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

OK

Cancel

Index (1-15) in Schedule Setup - You can type in four sets of time schedule for performing system reboot. All the schedules can be set previously in **Applications >> Schedule** web page and you can use the number that you have set in that web page.

If you want to reboot the router using the current configuration, check **Using current configuration** and click **Reboot Now**. To reset the router settings to default values, check **Using factory default configuration** and click **Reboot Now**. The router will take several seconds to reboot the system.

Note: When the system pops up Reboot System web page after you configure web settings, please click **Reboot Now** to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

4.15.13 Firmware Upgrade

You have to visit DrayTek website periodically to check if there is any new released firmware offered for your Vigor router to have newest features. If yes, download the file into your computer first.

Next, access into web interface of this router and open **System Maintenance>> Firmware Upgrade**. In the following web page, click Browse.. to locate file downloaded from DrayTek web site. Then, click the Upgrade button to perform the firmware upgrade operation.

System Maintenance >> Firmware Upgrade

Web Firmware Upgrade

Select a firmware file.

Click Upgrade to upload the file.

TFTP Firmware Upgrade from LAN

Current Firmware Version: 3.6.3

Firmware Upgrade Procedures:

1. Click "OK" to start the TFTP server.
2. Open the Firmware Upgrade Utility or other 3-party TFTP client software.
3. Check that the firmware filename is correct.
4. Click "Upgrade" on the Firmware Upgrade Utility to start the upgrade.
5. After the upgrade is complete, the TFTP server will automatically stop running.

Do you want to upgrade firmware ?

4.15.14 Activation

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

After you have finished the setting profiles for WCF (refer to **Web Content Filter Profile**), it is the time to activate the mechanism for your computer.

Click **System Maintenance>>Activation** to open the following page for accessing <http://myvigor.draytek.com>.

Note that such service mechanism is powered by Commtouch.

System Maintenance >> Activation Activate via interface : auto-selected ▼

Web-Filter License [Activate](#)
 [Status:Not Activated]

Authentication Message

```
WebFilter, service not activate 2010-08-16 07:58:36
```

Note: If you want to use email alert or syslog, please configure the SysLog/Mail Alert Setup page.
 If you change the service provider, the configuration of the function will be reset.

Available parameters are explained as follows:

| Item | Description |
|-------------------------------|--|
| Activate via Interface | Choose WAN interface used by such device for activating Web Content Filter. <div style="text-align: right;"> Activate via interface : auto-selected ▼ auto-selected WAN 1 WAN 2 WAN 3 </div> |
| Activate | The Activate link brings you accessing into www.vigorpro.com to finish the activation of the account and the router. |
| Authentication Message | As for authentication information of web filter , the process of authenticating will be displayed on this field for your reference. |

Below shows the successful activation of Web Content Filter:

System Maintenance >> Activation Activate via interface : auto-selected ▾

Web-Filter License [Activate](#)
[Status:Commntouch] [Start Date:2010-07-27 Expire Date:2010-08-27]

Authentication Message

```
Activated Wiz, Activated Wizard query license status Successful, 2010-07-27  
08:47:13
```

Note: If you want to use email alert or syslog, please configure the SysLog/Mail Alert Setup page.
If you change the service provider, the configuration of the function will be reset.

4.16 Diagnostics

Diagnostic Tools provide a useful way to **view** or **diagnose** the status of your Vigor router.

Below shows the menu items for Diagnostics.

- System Maintenance
- Diagnostics**
 - ▶ Dial-out Triggering
 - ▶ Routing Table
 - ▶ ARP Cache Table
 - ▶ IPv6 Neighbour Table
 - ▶ DHCP Table
 - ▶ NAT Sessions Table
 - ▶ Data Flow Monitor
 - ▶ Traffic Graph
 - ▶ Ping Diagnosis
 - ▶ Trace Route
 - ▶ Syslog Explorer
 - ▶ TSPC Status
- External Devices

4.16.1 Dial-out Triggering

Click **Diagnostics** and click **Dial-out Triggering** to open the web page. The internet connection (e.g., PPPoE) is triggered by a package sending from the source IP address.

[Diagnostics >> Dial-out Triggering](#)

Dial-out Triggered Packet Header

4.16.11 Syslog Explorer

Such page provides real-time syslog and displays the information on the screen.

For Web Syslog

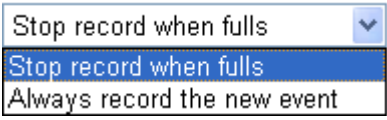

This page displays the time and message for User/Firewall/call/WAN/VPN settings. You can check **Enable Web Syslog**, specify the type of Syslog and choose the display mode you want. Later, the event of Syslog with specified type will be shown for your reference.

[USB Application >> Syslog Explorer](#)

The screenshot shows the Syslog Explorer interface. At the top, there are two tabs: 'Web Syslog' (selected) and 'USB Syslog'. Below the tabs, there is a checkbox labeled 'Enable Web Syslog'. To the right of the checkbox are three links: 'Export', 'Refresh', and 'Clear'. Below these links, there are two dropdown menus: 'Syslog Type' set to 'User' and 'Display Mode' set to 'Stop record when full'. At the bottom, there is a table with two columns: 'Time' and 'Message'.

Available parameters are explained as follows:

| Item | Description |
|-------------------|--|
| Enable Web Syslog | Check this box to enable the function of Web Syslog. |
| Syslog Type | Use the drop down list to specify a type of Syslog to be displayed.  |

| Item | Description |
|--------------|---|
| Display Mode | <p>There are two modes for you to choose.</p>  <p>Stop record when fulls – when the capacity of syslog is full, the system will stop recording.</p> <p>Always record the new event – only the newest events will be recorded by the system.</p> |
| Time | Display the time of the event occurred. |
| Message | Display the information for each event. |

For USB Syslog

This page displays the syslog recorded on the USB storage disk.

[USB Application >> Syslog Explorer](#)

4.17 External Devices

Vigor router can be used to connect with many types of external devices. In order to control or manage the external devices conveniently, open **External Devices** to make detailed configuration.

External Devices

External Device Auto Discovery

External Devices Connected

Below shows available devices that connected externally:

For security reason:

If you have changed the administrator password on External Device, please click the **Account** button to retype new username and password. Otherwise, the router will be unable to monitor the External Device device properly. Click the **Clear** button to Clear the off-line information and account information.

From this web page, check the box of **External Device Auto Discovery**. Later, all the available devices will be displayed in this page with icons and corresponding information. You can change the device name if required or remove the information for off-line device whenever you want.

When you finished the configuration, click **OK** to save it.

Note: Only DrayTek products can be detected by this function.

5

Trouble Shooting

situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer for advanced help.

5.1 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and WLAN/LAN cable connections. Refer to “**1.3 Hardware Installation**” for details.
2. Turn on the router. Make sure the **ACT LED** blink once per second and the correspondent **LAN LED** is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “**1.3 Hardware Installation**” to execute the hardware installation again. And then, try again.

5.2 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

For Windows

The example is based on Windows XP. As to the examples for other operation systems, please refer to the similar steps or find support notes in www.DrayTek.com.

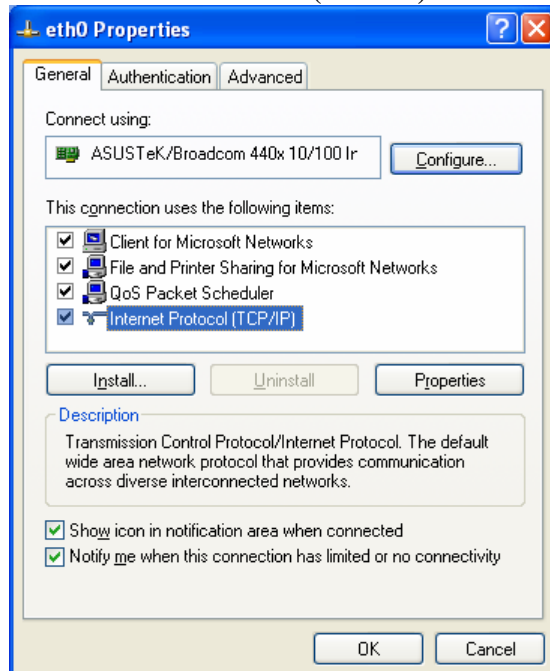

1. Go to **Control Panel** and then double-click on **Network Connections**.

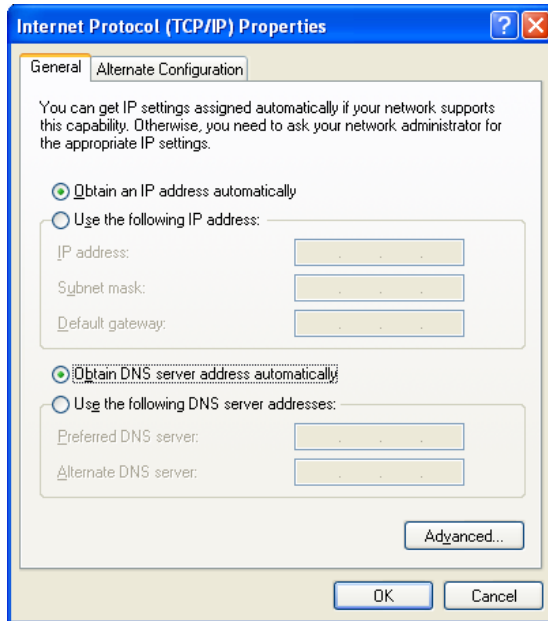

2. Right-click on **Local Area Connection** and click on **Properties**.

3. Select **Internet Protocol (TCP/IP)** and then click **Properties**.

4. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**.

For Mac OS

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

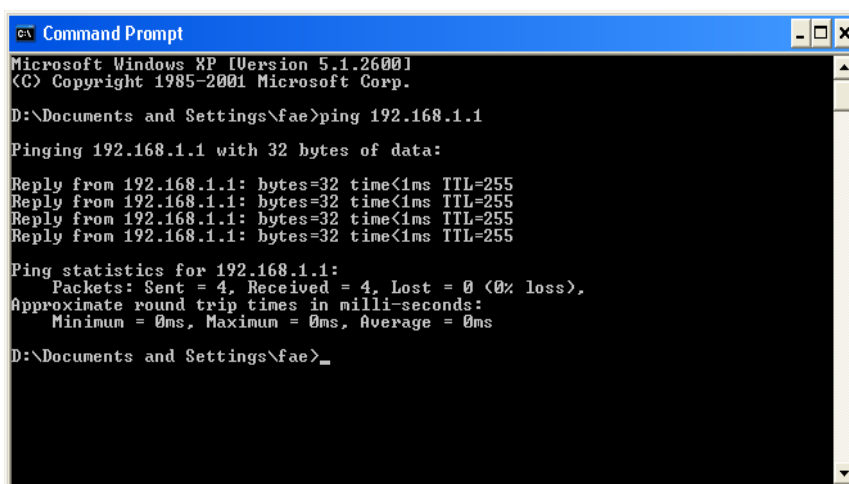

5.3 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as **get IP automatically**. (Please refer to the section 5.2)

Please follow the steps below to ping the router correctly.

For Windows

1. Open the **Command Prompt** window (from **Start menu**> **Run**).
2. Type **command** (for Windows 95/98/ME) or **cmd** (for Windows NT/ 2000/XP/Vista). The DOS command dialog will appear.

```
Microsoft Windows XP [Version 5.1.2600]

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_
```

3. Type ping 192.168.1.1 and press [Enter]. If the link is OK, the line of “**Reply from 192.168.1.1:bytes=32 time<1ms TTL=255**” will appear.
4. If the line does not appear, please check the IP address setting of your computer.

For Mac OS (Terminal)

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Utilities**.
3. Double click **Terminal**. The Terminal window will appear.
4. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of “**64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=xxxx ms**” will appear.

```

Terminal — bash — 80x24

5.4 Checking If the ISP Settings are OK or Not

Open **WAN >> Internet Access** page and then check whether the ISP settings are set correctly. Click **Details Page** of WAN1/WAN2/WAN3 to review the settings that you configured previously.

[WAN >> Internet Access](#)

Internet Access

| Index | Display Name | Physical Mode | Access Mode | Details Page | IPv6 |
|-------|--------------|---------------|----------------------|--------------|------|
| WAN1 | | Ethernet | Static or Dynamic IP | Details Page | IPv6 |
| WAN2 | | Ethernet | None | Details Page | IPv6 |
| WAN3 | | USB | None | Details Page | IPv6 |

Note : Only one WAN can support IPv6.

5.5 Problems for 3G Network Connection

When you have trouble in using 3G network transmission, please check the following:

Check if USB LED lights on or off

You have to wait about 15 seconds after inserting 3G USB Modem into your Vigor2920. Later, the USB LED will light on which means the installation of USB Modem is successful. If the USB LED does not light on, please remove and reinsert the modem again. If it still fails, restart Vigor2920.

USB LED lights on but the network connection does not work

Check the PIN Code of SIM card is disabled or not. Please use the utility of 3G USB Modem to disable PIN code and try again. If it still fails, it might be the compliance problem of system. Please open DrayTek Syslog Tool to capture the connection information (WAN Log) and send the page (similar to the following graphic) to the service center of DrayTek.

Transmission Rate is not fast enough

Please connect your Notebook with 3G USB Modem to test the connection speed to verify if the problem is caused by Vigor2920. In addition, please refer to the manual of 3G USB Modem for LED Status to make sure if the modem connects to Internet via HSDPA mode. If you want to use the modem indoors, please put it on the place near the window to obtain better signal receiving.

5.6 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware.

Warning: After pressing **factory default setting**, you will lose all settings you did before. Make sure you have recorded all useful settings before you pressing.

Software Reset

You can reset the router to factory default via Web page. Such function is available in **Admin Mode** only.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **Reboot Now**. After few seconds, the router will return all the settings to the factory settings.

Reboot System

Do you want to reboot your router ?

Using current configuration
 Using factory default configuration

Reboot Now

Auto Reboot Time Schedule

Index(1-15) in Schedule Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

OK

Cancel

Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the **ACT** LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

5.7 Contacting Your Dealer

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to support@DrayTek.com.
